Metallic Ores.—A decrease was shown in metallic ore mines, chiefly in Ontario; 68 employers reduced their staffs from 17,213 workers on May 1, to 17,095 at the beginning of June. Despite this loss, the index was higher than on June 1 of any other year since the series was commenced.

Non-Metallic Minerals, (other than coal).—According to data received from 74 firms in this group, they employed 8,853 persons, or 586 more than in the preceding month. Employment was in rather less volume than on June 1, 1929, although it was higher than on that date in earlier years of the record.

Transportation

Street Railways and Cartage.—A further increase in employment was registered in local transportation on June 1, when 142 companies added 445 employees to their staffs, bringing them to 25,025 on the date under review. This gain was not so large as that noted at the beginning of June, 1929, when the index was one point higher. The improvement shown was chiefly in Quebec.

Steam Railways.—Continued expansion was indicated in steam railway operation, in which the 105 co-operating employers enlarged their staffs from 78,705 in the preceding month to 79,978 on June 1. Quebec and the Prairie Provinces reported most of the increase, which was smaller than on the same date of a year ago.

Shipping and Stevedoring.—There were pronounced seasonal losses in employment in the Maritime Provinces, but the trend was decidedly upward in Quebec and Ontario. Statistics were received from 76 firms with 19,175 employees, as compared with 16,642 in the preceding month. Similar gains were noted on June 1, 1929, when the index was slightly higher.

Communications

Continued improvement was indicated on telephones and telegraphs; 66 companies and branches enlarged their staffs from 30,487 persons at the beginning of May, to 31,035 on June 1. Employment was at practically the same level as at the beginning of June, 1929.

Construction and Maintenance

Building.—The volume of employment afforded in building was greater than in the early summer of any other year on record. An aggregate staff of 55,228 was reported by the 705 contractors furnishing statistics, who had 49,902 workers on May 1. Activity increased in all except the Maritime Provinces, but the largest gains were in Ontario.

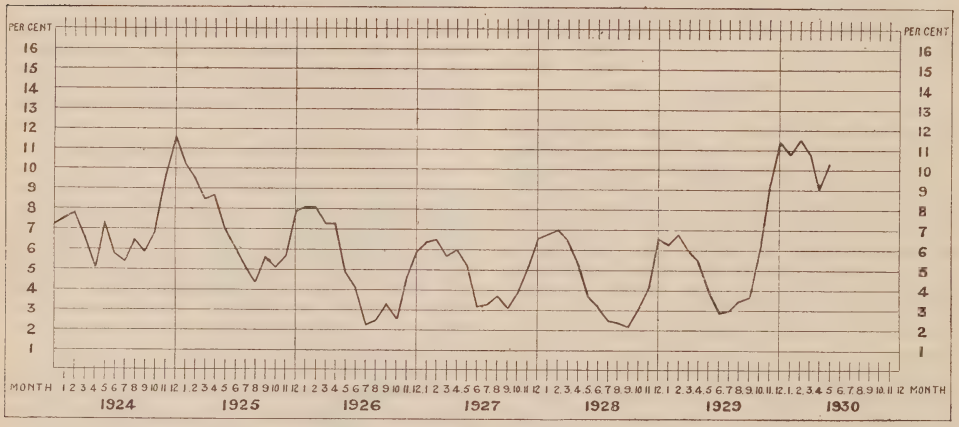
Highway.—The 251 highway and road contractors furnishing returns had 31,762 persons in their employ, or 13,712 more than at the beginning of May. This improvement, in which all provinces shared, was more extensive, and the level of employment was higher, than on June 1 in any other year since 1920.

Railway.—Continued advances were registered by the track departments of the railways, in which the volume of employment was less than at the beginning of June, 1929. The working forces of the 49 employers totalled 45,167 persons, as against 39,922 in the preceding month. The most noteworthy increases were in the Prairie Provinces, although there was general improvement except in British Columbia.

Services

Hotels and restaurants showed their customary seasonal increase, while only small changes took place in other branches of this group. Statements were compiled from 240 firms employing 23,435 workers, as compared with 22,385 on May 1. The index was higher than on June 1 in any other year of the record.

Trade



Improvement was indicated in both retail and wholesale trade; 757 establishments reported 87,705 employees, or 1,583 more than in their last monthly return. This gain was slightly larger than that noted on June 1 in any other year since 1920, in all of which the level of employment was lower.

Index numbers of employment by economic areas, leading cities and industries are given in the accompanying tables. The columns headed "relative weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada on the date under review.

(2) Unemployment in Trade Unions at the Close of May, 1930

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades or who are idle because of illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployed is based, it should be understood that such figures have reference only to the organizations reporting.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

Chiefly due to quietness in the Quebec garment trades at the close of May unemployment showed a moderate increase in volume from the preceding month, the 1,679 local unions from which reports were tabulated with an aggregate of 198,595 members indicating 10·3 per cent of idleness compared with 9·0 per cent in April. Declines in employment of minor importance than were recorded in Quebec occurred in Manitoba, Alberta and British Columbia, while of the gains in the remaining provinces Saskatchewan reported the most noteworthy. Contrasted with the situation in May of last year when 4·0 per cent of the members reported were idle, Quebec as in the previous comparison, was a large factor in the adverse situation indicated during the month under survey, though in all provinces some curtailment of employment was noted.

A separate tabulation is compiled each month of unemployment among local trade unions in the largest city in each province except Prince Edward Island. A considerable drop in the volume of work afforded Montreal members was indicated during May, operations for garment workers particularly being largely restricted. Moderate reductions in activity were reported by Vancouver unions, while in Winnipeg the decline indicated was

fractional only. On the other hand, the level of employment for Edmonton unions was substantially higher than in April and moderate improvement was recorded in Halifax. Regina, Toronto and Saint John unions also reported an upward employment tendency. All cities used in the comparison reflected less favourable conditions than in May of last year, Montreal, Regina and Vancouver union members being especially slack.

Accompanying this article is a chart which indicates the unemployment trend by months from January, 1924, to date. It will be noticed that the curve at the close of May extended in an upward direction from that of the previous month, indicating a reduction in the employment volume afforded and at the end of the month the level attained was substantially higher than that shown in May of last year.

Employment in the manufacturing industries during May showed a marked falling off from the previous month, an outstanding feature in the adverse situation being the inactivity recorded in the garment trades of Quebec, where employment was at a low ebb. Reports for May were tabulated from an aggregate of 475 unions, comprising a membership of 57,016 persons, 7,077 of whom, or a percentage of 12·4 were idle at the end of the month contrasted with 6·6 per cent in April and with 4·8 per cent in May, 1929. Reductions in activity on a much smaller scale than in the garment trades were recorded by leather, wood, jewellery, and glass workers. On the other hand, cigar makers, printing tradesmen, iron and steel workers, hat and cap makers and unclassified workers reported some improvement, though the gains did not involve a large number of workers. As in the previous comparison, garment workers were important contributors to the total increase in unemployment reported over May last year, though the reductions indicated by iron and steel workers were also substantial. In the majority of the remaining trades some curtailment of operations was apparent from May a year ago. Hat and cap makers, cigar makers and brewery workers alone showing increases in activity which were, however, quite small.

The coal mining situation showed little change during May from the previous month, the 43 unions from which returns were tabulated with 17,205 members reporting 9·2 per cent of idleness compared with 8·6 per cent in April. Employment in the Alberta mines subsided slightly from April, while in Nova Scotia and British Columbia the level of activity remained approximately the same in both months. Compared with the situation in May last year, when 5·8 per cent of the members reported were idle, Alberta and British Columbia unions both shared substantially in the depression indicated during the month reviewed, while in Nova Scotia conditions were somewhat improved.

Practically the same volume of inactivity was shown by workers in the building trades during May as in the previous month, the 210 unions from which returns were tabulated with 28,927 members indicating 23.3 per cent of idleness compared with 23·2 per cent of unemployed members in April. Hod carriers and building labourers were much busier than in April and employment for carpenters and joiners, plumbers and steamfitters, tile

layers, lathers and roofers and granite and stonecutters also showed advancement. On the contrary, bricklayers, masons and plasterers, bridge and structural iron workers, painters, decorators and paperhangers and electrical workers recorded employment losses. Conditions were decidedly less active in the building trades, as a whole, than in May a year ago when 8·2 per cent of the members were idle, all trades participating in this depression. The most extensive contractions, however, were indicated by carpenters and joiners and bricklayers, masons and plasterers.

The transportation industries with 718 unions reporting 69,053 members, registered 6·1 per cent of idleness at the end of May contrasted with 6·8 per cent in April and with 2·1 per cent in May, 1929. Steam railway employees, whose returns constitute about 80 per cent of the entire group membership reporting, were slightly better engaged than in April and the situation for navigation workers, street and electric railway employees and teamsters and chauffeurs also showed some improvement. Steam railway employees reported reductions involving the greatest number of workers when compared with May a year ago and noteworthy declines occurred among navigation workers. Street and electric railway employees reported a fractional adverse change only. On the other hand, employment for teamsters and chauffeurs was more prevalent than in May of last year.

Longshoremen whose returns are tabulated separately each month owing to the casual nature of their employment, indicated improvement during May over both the previous month and May, 1929. Returns for the month under review were tabulated from 13 associations of these workers with 6,563 members, 932 or 14.2 per cent of whom were idle on the last day of the month contrasted with 23.7 per cent in April and with 15.1 per cent in May of last year.

Retail clerks reported adequate work for all their members during May as in the previous month, contrasted with .6 per cent of idleness in May, 1929. Reports were received from 5 unions of these workers during the month surveyed embracing a membership of 1,280 persons.

Reports tabulated during May from 65 unions of civic employees with a membership total of 8,117 persons, indicated .7 per cent of inactivity compared with .5 per cent in April and .7 per cent in May a year ago.

In the miscellaneous group of trades a nominal decline in employment was reported during May from the previous month according to the returns tabulated from 116 labour organizations covering a membership of 6,070 persons. Of these 476 or 7.8 per cent were idle on the last day of the month, contrasted with 7.2 per cent in April. Activity for theatre and stage employees was somewhat reduced from April and in the unclassified division employment eased off slightly. Hotel and restaurant employees, barbers and stationary engineers and firemen, however, reported minor improvement. Contrasted with the situation existing in May of last year when 4.6 per cent of unemployment was reported in the miscellaneous group of trades, theatre and stage employees, and stationary engineers and firemen indicated noteworthy reductions in the employment volume during the month reviewed, and barbers and unclassified workers declines on a much smaller scale. On the other hand hotel and restaurant employees were somewhat better engaged.

Fishermen reported the same percentage of unemployment during May as in the previous month namely 1.3, compared with 3.7 per cent of idleness in May, 1929. The percentage for the month under survey was based on the returns received from 2 unions of these workers with 775 members.

Lumber workers and loggers with 4 unions showing a combined membership of 920 persons, indicated 12.7 per cent of their members idle on the last day of May contrasted with 11.9 per cent in April and with a fully employed situation in May last year.

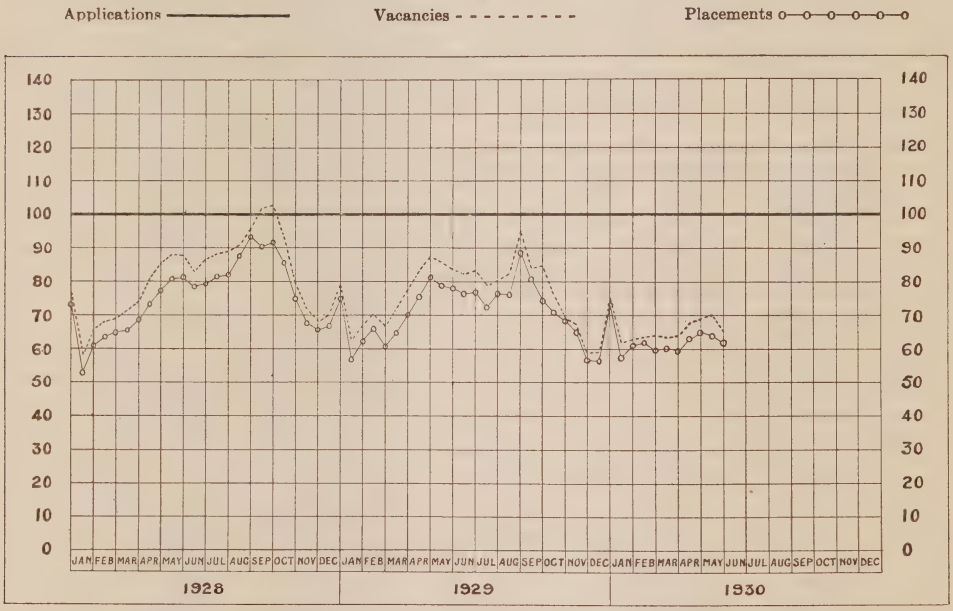
Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1929 inclusive and also the percentage of unemployment by provinces for May each year from 1919 to 1927 inclusive and for each month from January, 1928, to date. Table II summarizes the returns in the various groups of industries for the same months as in table I.

(3) Employment Office Reports for May, 1930

The volume of business transacted in the offices of the Employment Service of Canada during the month of May, 1930, as shown by the average daily placements effected showed declines of over 4 per cent and nearly 26 per cent, when the records were compared with those of the preceding month and with those of May last year. The total placements for the entire month under review were slightly higher, however, due to the fact that there were two more working days in May than in April. On comparison with last month sub-

stantial gains were shown in services and logging, followed by minor increases in manufacturing, transportation, mining and trade, but heavy declines occurred in construction and maintenance and farming. Logging was the only group to show a gain in placements over those of May, 1929, declines being shown in all remaining industries, the largest of which were in construction and maintenance, manufacturing, farming and services.

The accompanying chart shows the trend of employment from January 1928 to date as represented by the ratio of vacancies offered and of placements effected for each 100 applications for work registered at the offices of the service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies in relation to applications showed practically no change the first half of the month, but registered a marked downward trend during the latter half of the period, while that of placements was downward throughout May. The major decline, however, occurring during the latter half of the period. In both instances, the levels attained were from 16 to 19 points below those shown at the close of May, 1929. The ratio of vacancies to each 100 applications was 70.0 and 65.1 during the first and second half of May, respectively, in contrast with ratios of 85.9 and 83.9 during the same periods of 1929. The ratios of placements to each 100 applications during the periods under review were 64.1 and 61.0, as compared with 78.9 and 78.0 during the corresponding month of 1929.



The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during May, 1930, was 1,210, as compared with a daily average of 1,265 in the preceding month and 1,646 in May, 1929.

The average number of applications for employment received by the offices during the month under review was 1,789, in comparison with 1,840 in April and with 1,939 in May last year.

The average number of placements made daily by the offices of the Service during May, 1930, was 1,128, of which 629 were in regular employment and 499 in work of one week's duration or less, as compared with a total daily average of 1,180 in the previous month. Placements during May last year averaged 1,521, consisting of 955 placements in regular and 566 in casual employment.

During the month of May, 1930, the offices of the Service referred 30,585 persons to vacancies and effected a total of 29,318 placements, of these the placements in regular employment were 16,361, of which 12,304 were for men and

95 placements effected by offices since closed

NOTE.—In the corresponding table published in the last issue on page 702 the name of Melfort was omitted from the list of Saskatchewan offices, after Estevan. The names from "Ontario" to "Estevan" should have been moved up one line.

4,057 for women, while placements in casual work numbered 12,957. The number of vacancies reported by employers was 19,936 for men and 11,513 for women, a total of 31,449, while applications for work numbered 46,507, of which 32,388 were from men and 14,119 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1920, to date:—

Year	Placements		
	Regular	Casual	Totals
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930 (5 months)	69,104	59,709	128,813

NOVA SCOTIA

Opportunities for employment as indicated by orders received at employment offices in Nova Scotia during May were nearly 18 per cent better than in the preceding month, but 7 per cent less favourable than during the corresponding month last year. Placements were over 22 per cent in excess of April, but were nearly 9 per cent less than during May, 1929. Services was the only group in which there was any appreciable gain in placements over May of last year and this increase was more than offset by declines in manufacturing, logging and construction and maintenance, the latter being the most noteworthy. The changes in other groups were small. Industrial divisions in which most of the placements were effected during the month were:—manufacturing, 47; construction and maintenance, 69; trade, 88; and services, 639, of which 413 were of household workers. During the month 100 men and 84 women were placed in regular employment.

NEW BRUNSWICK

There was an increase of nearly 33 per cent in the number of positions offered by New Brunswick employment offices during May when compared with the preceding month and of nearly 4 per cent when compared with the corresponding month last year. There was a gain of over 30 per cent in placements when compared with April, but a decline of over one per cent in comparison with May, 1929. Services and construction and maintenance were the only groups in which more placements were made during the month under review than in May last year, the gain under construction and maintenance being nominal only. None of the declines in placements were large, but combined, they slightly more than offset the gains mentioned above. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 36; construction and maintenance, 179; and services, 806 of which 581 were of household workers. Regular employment was found for 206 men and 59 women.

QUEBEC

Employment opportunities as indicated by orders received at employment offices in the Province of Quebec were over 26 per cent better than in the preceding month, but nearly 4 per cent less favourable than during the corresponding month last year. There was a gain of over 56 per cent in placements when compared with April, but a decline of nearly 7 per cent in comparison with May, 1929. Placements in the logging industry were considerably higher than in May last year, and manufacturing and mining showed some improvement. These gains, however, were more than offset by declines in other groups, of which those in trade, services, construction and maintenance and transportation were the most pronounced. Industrial groups in which most of the placements were effected during the month were: manufacturing, 194; logging, 500; farming, 98; transportation, 40; construction and maintenance, 642; trade, 59; and services, 837, of which 558 were of household workers. There were 1,599 men and 486 women placed in regular employment during the month.

ONTARIO

During the month of May, positions offered through employment offices in Ontario showed a gain of over 19 per cent when compared with the preceding month, but a decline of 21 per cent in comparison with the corresponding month last year. There was a gain of over 18 per cent in placements when compared with April, but a decline of nearly 20 per cent in comparison with May, 1929. Logging and services were the only groups to show gains of importance in placements over May a year ago. There were large reductions in placements under manufacturing and construction and maintenance, with smaller declines under transportation, trade, farming and mining. Placements by industrial divisions included: manufacturing, 1,261; logging, 1,539; farming, 798; mining, 78; transportation, 330; construction and maintenance, 2,733; trade, 452;

and services, 6,561, of which 3,179 were of household workers. During the month 6,314 men and 1,638 women were placed in regular employment.

Manitoba

Employment offices in Manitoba were notified of nearly 12 per cent less vacancies during May than in the preceding month and of nearly 31 per cent less than in the corresponding month last year. Placements were over 19 per cent less than in April and over 30 per cent below May, 1929. All industrial divisions, except logging, where a small gain was reported, participated in the declines in placements for May of last year, those in services, construction and maintenance and farming being the most noteworthy. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 86; logging, 111; farming, 378; construction and maintenance, 181; trade, 108; and services, 2,058, of which 1,628 were of household workers. Placements in regular employment numbered 609 of men and 635 of women.

Saskatchewan

The demand for workers as indicated by orders, listed at employment offices in Saskatchewan during May was nearly 22 per cent less than in the preceding month and 41 per cent below the corresponding month last year. There was a decline of over 17 per cent in placements when compared with April and of nearly 38 per cent in comparison with May, 1929. All industrial divisions participated in the declines in placements from May last year, those in farming, services and construction and maintenance being the most pronounced. Placements by industrial divisions included: manufacturing, 130; farming, 569; transportation, 61; construction and maintenance, 768; trade, 116; and services, 1,140, of which 650 were of household workers. There were 1,187 men and 445 women placed in regular employment during the month.

Alberta

During May orders received at employment offices in Alberta called for over 22 per cent less workers than in the preceding month and over 40 per cent less than during the corresponding month last year. There was a decline also in placements of over 22 per cent when compared with April and of nearly 39 per cent in comparison with May, 1929. Declines in placements from May of last year were recorded in all industrial divisions except communication and finance and in these the gains were nominal only. The largest reductions were reported under farming and construction and maintenance. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 202; farming, 819; construction and maintenance, 425; trade, 61; and services, 1,057, of which 679 were of household workers. During the month 1,209 men and 380 women were placed in regular employment.

British Columbia

Orders listed at employment offices in British Columbia during May called for 11 per cent less workers than in the preceding month and of over 41 per cent less than during the corresponding month last year. There was a decline of over 12 per cent in placements when compared with April and of nearly 41 per cent in comparison with May, 1929. Of the declines in placements from May last year, in which all industrial divisions participated, those in the manufacturing industries were the most pronounced, although the reductions under construction and maintenance, logging and services were also substantial. Placements by industrial divisions were: manufacturing, 231; logging, 213; farming, 183; mining, 50; transportation, 140; construction and maintenance, 749; trade, 85 and services, 1,098, of which 581 were of household workers. There were 1,080 men and 330 women placed in regular employment.

Movement of Labour

During the month of May, 1930, the offices of the Employment Service of Canada made 16,361 placements in regular employment of which 7,898 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,011 were granted the Employment Service reduced transportation rate, 798 going to points within the same province as the dispatching office and 213 to other provinces. The reduced transportation rate which is 2.7 cents per mile with a minimum fare of $4.00 is granted by the railway companies to *bona fide* applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

The movement of labour both within and from the province of Quebec during May was of bushmen and involved an issue of 161 reduced rate certificates, 83 of which were to centres within the province and 78 to points outside. Provincially the Montreal office was responsible for the transfer of 72 bushmen and Quebec of 11 to employment within their respective zones. The interprovincial movement

originated in Hull from which centre 78 bushmen proceeded to Pembroke and vicinity.

The offices in Ontario granted 331 certificates for reduced transportation during May, 302 of which were issued to provincial points, the balance representing an interprovincial movement. Travelling on certificates granted at Port Arthur 2 carpenters went to Kingston and 110 bush workers and 7 survey workers to various points in the Port Arthur zone, while from Pembroke 5 chain-men, one civil engineer, one cook and one cookee journeyed to Fort William, 2 river drivers, 2 carpenters and one millwright to Sudbury, 2 river drivers, one sawmill labourer and one lumber piler to Sault St. Marie and one mill hand to Timmins. The transfers from North Bay included 92 bush workers and one farm hand going to Cobalt and 9 survey workers and one painter to Timmins. Carried from Toronto at the special rate 5 labourers were bound for Ottawa, one stationary engineer and one painter for North Bay, 2 hotel cooks for Sudbury, one patrol man for Port Arthur, one bottler for Windsor, one miner for Timmins and one porter for Sarnia. Destined to points within their respective zones, 44 bush workers were transferred from Sudbury and 5 bush workers from Fort William. The 29 persons journeying outside the province were railway construction workers for employment in the Winnipeg zone, all of whom received their certificates for reduced transportation at Port Arthur.

In Manitoba 225 persons secured certificates for reduced transportation during May, 131 of whom travelled to provincial employment and 94 to other provinces. Within the province all the transfers were effected by the Winnipeg office which dispatched 15 farm domestics, one cook and 2 hotel workers to Brandon, 2 cooks and one waitress to Dauphin and 52 farm hands, 2 farm generals, 21 bush workers, 15 mine workers, 14 highway construction workers, 2 electricians, one labourer, one pipe fitter's helper, one handy man and one domestic to points within the Winnipeg zone. Of the persons going outside the province Winnipeg transferred 31 bush workers, 15 lumber workers, one highway construction worker, 2 hotel employees, 2 farm hands and one town general to Port Arthur, one highway construction cook to Yorkton, one railway construction worker to Prince Albert, one hotel cook to Regina and 33 farm hands and 2 farm housekeepers to employment at various Saskatchewan points. In addition from Dauphin 2 labourers were conveyed at the special rate to Edmonton and 2 hotel waitresses to Prince Albert.

Saskatchewan offices were instrumental in the transfer of 45 workers, 42 of whom went to points within the province and 3 to centres outside. The movement to other provinces originated at Regina and comprised the transfer of one pattern maker to Winnipeg and one plumber each to the Ottawa and Dauphin zones. The Saskatchewan rural districts received a substantial share of the workers travelling to employment within the province, 22 farm hands and 2 farm housekeepers being dispatched from Regina, 4 farm hands from Saskatoon and 2 farm hands from Moose Jaw to various agricultural centres throughout the province. From Regina, also, one hotel porter and one highway construction cook went to Yorkton, one waitress and one cook to Estevan, and one hotel cook to Prince Albert, which zone also received 1 sawmill worker, 1 bushman and one cook from Saskatoon. To points within their respective zones, Moose Jaw transferred in addition one hotel waitress and Prince Albert one river driver, one blacksmith and one blacksmith's helper.

From Alberta centres 120 persons travelled at the special reduced rate during May, 113 to provincial situations and 7 to points in other provinces. Of the latter, the Edmonton office was responsible for the transfer of 3 farm hands to the Saskatoon zone and of one farm hand and one farm domestic to North Battleford, while from Lethbridge, one sanitarium orderly went to Kamloops and from Calgary one maid to Cranbrook. Of the transfers within the province 89 were from Edmonton and included 4 farm hands and one farm cook going to Lethbridge, one farm hand to Medicine Hat and 35 sawmill workers, 12 farm hands, 9 bush workers, 11 highway construction labourers, 4 hotel employees, 4 mine workers, 5 labourers, one cook, one rock driller and one draughtsman to employment within the Edmonton zone. From Calgary in addition, 4 farm hands, 3 farm domestics and one cook proceeded to Drumheller, 3 farm hands to Medicine Hat, 2 farm hands and one restaurant cook to Lethbridge, one farm hand to Edmonton and 9 farm hands within the Calgary zone.

Transportation certificates issued by British Columbia offices in May numbered 129 of which 127 were provincial and 2 interprovincial. Provincially from Vancouver 11 mine workers, 3 cooks and one farm hand went to Penticton, 6 miners and 5 farm hands to Prince George, 4 highway construction workers and one railway construction foreman to Nelson, 2 mine workers, one first aid man and one cook to Revelstoke, one hotel worker to Kamloops and 22 bush workers, 9 mine workers, 15 carpenters, 2 flunkeys, one baker, 5 cooks and one waitress to centres within the Vancouver zone. To employment within their respective zones Prince George transferred 15 railway construction workers and 5 highway construc-

tion workers, Nelson 9 bush workers and 4 sawmill workers and Prince Rupert 2 mine workers and one teamster. Of the 2 persons going outside the province one was a carpenter destined to Edmonton and one a ranch housekeeper going to Lethbridge, both of whom travelled on certificates issued at Vancouver.

Of the 1,011 persons who benefited by the Employment Service reduced transportation rate during May, 664 travelled by the Canadian National Railways, 313 by the Canadian Pacific Railway, 32 by the Pacific Great Eastern Railway and 2 by the Northern Alberta Railway.

(4) Building Permits Issued in Canada During May

The value of the building permits issued by 61 cities during May, 1930 was higher by 20.5 per cent than in April, 1930, but lower by 18.9 per cent than in May, 1929. According to statements tabulated by the Dominion Bureau of Statistics, the authorizations amounted to $19,621,302 as compared with $16,286,993 in the preceding month and $24,185,738 in May, 1929. The total for the first five months of 1930 namely, $65,267,996, was higher than that for the corresponding period of any of the years from 1920 to 1927, but lower than in the same period of 1928 or 1929. Wholesale prices of building materials were lower in 1930 than in any other year of the record.

Some 50 cities furnished detailed statistics, showing that they had issued over 1,300 permits for dwellings valued at aproximately $5,300,000 and for some 3,200 other buildings estimated to cost over $10,000,000. In April, authority was given for the erection of some 1,400 dwellings and 3,300 other buildings, valued at approximately $5,000,000 and $19,000,000 respectively.

Quebec Ontario and Manitoba reported increases of 105.6 per cent, 32.4 per cent and 25.7 per cent, respectively, in the value of the permits issued as compared with April, 1930. Of the declines in the remaining provinces, that of $1,185,714 or 90.2 per cent in New Brunswick was most pronounced.

As compared with May, 1929, Ontario alone registered an increase. All the other provinces recorded declines, of which that of $2,068,204 or 28.9 per cent in Quebec was most noteworthy.

[1] Corrected figure for St. Thomas.

[2] Report not received.

Of the larger cities, Montreal reported a higher total of building permits issued than in April, 1930, but a lower than in May, 1929; in Toronto there was a decrease in both comparisons, while Winnipeg and Vancouver showed an increase in the first but a loss in the second. Of the other centres, Sydney, Moncton, Quebec, Sherbrooke, Kingston, London, Niagara Falls, Ottawa, Welland, Woodstock, Kamloops and Prince Rupert recorded increases in the value of the building authorized as compared with both the preceding month and the same month of last year.

Cumulative Record for First Five Months, 1930.—The following table gives the value of the building authorized by 61 cities in May and in the first five months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first five months of the same years are also given (1926=100).

The aggregate for the first five months of this year was 32.6 per cent lower than in 1929, the previous high level of the record, while the average index numbers of wholesale prices of building materials continued lower than in most of the years since 1920.

Year	Value of permits issued in May	Value of permits issued in first five months	Indexes of value of permits issued in first five months (1920=100)	Average indexes of wholesale prices of building materials in first five months (1926 average=100)
	$	$		
1930.....	19,621,302	65,267,996	137.0	92·8
1929.....	24,185,738	96,792,675	200·6	99·1
1928.....	27,515,522	79,285,027	166·4	96·9
1927.....	20,138,657	62,479,480	131·1	96·7
1926.....	18,504,296	60,042,359	126·0	101·3
1925.....	15,520,435	50,983,833	107·0	103·1
1924.....	14,807,589	46,544,689	97·7	111·3
1923.....	18,937,638	57,946,608	121·6	111·1
1922.....	19,527,061	54,040,922	113·4	102·0
1921.....	14,460,878	41,530,750	87·2	132·2
1920.....	13,082,015	47,640,916	100·0	144·7

Table I gives the value of the building permits issued by 61 cities during May and April 1930, and May, 1929. The 35 cities for which records are available since 1910 are marked by asterisks.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during May is reproduced below. The following report on employment conditions in the United States is based on the information published by the United States Department of Labor, giving statistics showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labor, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for June, 1930, and previous months are reproduced below.

Great Britain

There was a further decline in employment during May. The industries in which the principal increases in the numbers unemployed occurred during the month were coal mining, shipbuilding and marine engineering, motor vehicle manufacture, the cotton, linen, and lace industries, textile bleaching, dyeing and finishing, slate quarrying, and dock and harbour service. On the other hand there was improvement in the building, public works contracting, general ironfounding, silk and artificial silk, hosiery, boot and shoe, and clothing industries.

Among the workpeople numbering approximately 12,100,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at May 26, 1930 (including those temporarily stopped as well as those wholly unemployed) was 15·3, as compared with 14·6 at April 28, 1930, and with 9·7 at May 27, 1929. The percentage wholly unemployed at May 26, 1930, was 11·1, as compared with 10·8 at April 28, 1930; while the percentage temporarily stopped was 4·2, as compared with 3·8. For males alone the percentage at May 26, 1930, was 15·5, and for females, 15·0; at April 28, 1930, the corresponding percentages were 14·9 and 13·8.

On May 26, 1930, the numbers of persons on the registers of Employment Exchanges in Great Britain and Northern Ireland were 1,207,011 wholly unemployed, 517,061 temporarily stopped and 99,160 normally in casual employment, making a total of 1,823,232. This was 71,426 more than a month before and 657,930 more than a year before. The total

on May 26, 1930, comprised 1,292,915 men, 45,584 boys, 440,033 women and 44,700 girls.

United States

The Bureau of Labor Statistics of the United States Department of Labor reports a slight change in employment in the combined 13 industrial groups surveyed in May as compared with April. Reports to the department from other sources indicate an improvement in employment conditions, notably in the building trades which, however, are not covered in the bureau's employment figures. Federal, State, and Municipal construction work has increased steadily under the current program of expansion.

May ordinarily shows little net change in employment in the 13 industrial groups surveyed by the bureau. Excluding manufacturing, the total for the remaining 12 groups shows an increase of one-tenth of 1 per cent in employment and a gain of 1 per cent in pay-roll totals. Manufacturing industries, which have shown declines from April to May in 5 of the 7 years preceding 1930, reported a decrease of 1·6 per cent in employment and a loss of 2·4 per cent in earnings. The combined total for the 13 groups, covering 39,422 establishments with 5,063,416 workers whose earnings in one week were $135,496,232, shows 0·9 per cent fewer employees and a decrease of 1·2 per cent in pay-roll totals in May.

Six of the 13 industrial groups reported increased employment in May—anthracite mining, quarrying, electric railroads, telephone and telegraph, power-light-water plants, and crude petroleum production.

The seven groups reporting decreased employment were—manufacturing, bituminous coal mining, metalliferous mining, wholesale and retail trade, hotels, and canning.

The figures for the several groups are not weighted according to the relative importance of each industry, therefore, they represent only the employees in the establishments concerned.

The per cents of change in May in employment and pay-roll totals in manufacturing industries are based upon returns made by 13,388 establishments in 54 of the principal manufacturing industries of the United States. These establishments in May, 1930, had 3,271,015 employees whose combined earnings in one week were $87,477,094.

Fifteen of the 54 separate industries had more employees in May than in April, the greatest gains having been in the ice cream, woolen goods, cement, brick, rubber tire, and slaughtering industries. The automobile industry reported an increase of 1·5 per cent in employment and a gain of 0·8 per cent in earnings. Each of the fifteen industries reporting increased employment also showed increased pay-roll totals with the exception of newspaper printing, which coupled a small gain in employment with a slight decrease in earnings.

Four groups of industries—food, tobacco, stone-clay-glass, and vehicles—showed employment gains in May, the food and tobacco groups also reporting increased earnings.

The outstanding decrease in employment in May was a seasonal one of 41·7 per cent in fertilizers, marking the close of the spring shipping season. Nine of the ten industries of the textile group had fewer employees in May than in April and decreased employment also occurred in the following important manufacturing industries: Electrical machinery (3·8 per cent), steam car building and repairing (1·0 per cent), foundries (2·5 per cent), and boots and shoes (3·9 per cent). Employment in the iron and steel industry remained practically unchanged, a decline of one-tenth of 1 per cent in employment occurring between April and May.

Decreased employment and earnings were shown in each geographic division in May, with the exception of the Mountain district which showed a gain in both items.

Per capita earnings in manufacturing industries in May, 1930, were 0·9 per cent lower than in April, 1930.

In May, 1930, 10,776 manufacturing establishments reported an average of 85 per cent of a full normal force of employees, who were working an average of 94 per cent of full time; the percentages reported showing a decrease of 2 per cent in average normal force with no change in average time operated.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labour, indicate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent; April, 1930, 21 per cent; May, 1930, 20 per cent, June, 1930, 20 per cent.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which included among their provisions fair wages conditions for the protection of the labour to be employed. The Fair Wages Policy of the Government of Canada has been in effect since 1900 and is now expressed in an Order in Council which was adopted June 7, 1922, and amended April 9, 1924.

The Fair Wages Order in Council requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, dry-docks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as

respects hours in the district where the work is carried on, or if there be no custom of the trade as respects hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams).

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below,* or the general fair wages clause above mentioned:—

DEPARTMENT OF MARINE

Contracts in Group "A" (Construction, etc.)

Construction of a house boat for the Hydrographic Service of the Pacific Coast. Name of contractors, Vancouver Shipyards, Ltd., Vancouver, B.C. Date of contract, January 28, 1930. Amount of contract, $31,350.00. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Construction of living quarters, etc., for the personnel of the Radio Station at Edmonton, Alta. Name of contractor, J. A. Peters, Edmonton, Alta. Date of contract, June 24, 1930.

*Where more than 8 hours a day are shown in certain of these schedules, tenders had been accepted prior to the Eight-Hour Day Act becoming effective on Government works, and the hours shown were based on those prevailing in the district.

Amount of contract, $7,537.45. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers and masons	$1 45	8
Plumbers and steamfitters	1 15	8
Sheet metal workers	1 10	8
Carpenters and joiners	1 00	8
Electricians	1 00	8
Teamsters, team and wagon	95	8
Painters & Glaziers	95	8
Felt & Gravel roofers	80	8
Sheet metal improvers	75	8
Electricians' helpers	60	8
Plumbers & steamfitters' helpers	60	8
Truck drivers	50	8
Building labourers	50	8
Common labourers	55	8

Overtime may be permitted in case of necessity on basis of time and one half.

Exceptions to the 8-hour day and overtime provisions will be recognized in preparatory and complementary work.

Supply, fabrication and erection of the structural steel required for the Hangar at the Royal Canadian Air Force Training Establishment, Trenton, Ont. Name of contractors, John T. Hepburn, Ltd., Toronto, Ont. Date of contract, June 25, 1930. Amount of contract, $14,950.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers	$1 10	8
Bricklayers' labourers	50	8
Masons	1 10	8
Masons' labourers	50	8
Plasterers	1 10	8
Plumbers	70	8
Carpenters	80	8
Electricians	70	8
Painters & Glaziers	70	8
Concrete labourers	40	8
Ordinary labourers	40	8
Sheet metal workers	70	8
Roofers—felt and gravel	50	8
Roofers—sheet metal	70	8
Driver—2 horses & wagon	75	8
Structural ironworkers	1 00	8

N.B.—Overtime may be permitted in case of necessity on the basis of time and one half.

Exceptions to the 8-hour day and overtime provisions will be recognized in preparatory and complementary work.

Construction of Hangar foundations at Trenton Air Port, Trenton, Ont. Name of contractor, J. J. McNab, Trenton, Ont. Date of contract, June 16, 1930. Amount of contract, approximately $5,000.00. The foregoing fair wages schedule was included in the contract.

Laying of water mains at Trenton Air Port, Trenton, Ont. Name of contractor, J. J. McNab, Trenton, Ont. Date of contract, June 16, 1930. Amount of contract, approximately $10,000.00. The foregoing fair wages schedule was inserted in the contract.

Levelling Cottage Point, Trenton Air Port, Trenton, Ont. Name of contractor, J. J. McNab, Trenton, Ont. Date of contract, June 17, 1930. Amount of contract, $4,337.52. The foregoing fair wages schedule was inserted in the contract.

Grading Aerodrome at Trenton Air Port, Trenton, Ont. Name of contractor, J. J. McNab, Trenton, Ont. Date of contract, June 24, 1930. Amount of contract, $4,799.65. The foregoing fair wages schedule was inserted in the contract.

Construction of Caretaker's Quarters at the Rifle Range, North Vancouver, B.C. Name of contractors, Messrs. Stuart and Grant, Vancouver, B.C. Date of contract, June 24, 1930. Amount of contract, $3,493.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers and masons	$1 35	8
Carpenters and joiners	1 00	8
Cement finisher	93¾	8
Cement mixer	56¼	8
Electricians	1 17½	8
Electricians' helpers	62½	8
Engineer—2 drum	87½	8
Engineer—gasoline	75	8
Labourers, common	50	8
Lathers	1 00	8
Painters and paperhangers	90	8
Plasterers	1 30	8
Plasterers' helpers	87½	8
Plumbers and steamfitters	1 18¾	8
Plumbers and steamfitters' helpers	62½	8
Sheet metal workers	1 12½	8
Sheet metal workers' helpers	56¼	8
Terrazzo layers	75	8
Terrazzo layers' helpers	50	8
Tile setters	1 25	8
Tile setters' helpers	62½	8
Teamsters with team and wagon	1 25	8

Rebuilding Fortification Walls at St. John's Gate, between retaining wall and Auditorium, Quebec, P.Q. Name of contractor, Emile Cote, Quebec, P.Q. Date of contract, June 7, 1930. Amount of contract, $4,920.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters	$ 60	8
Masons	1 00	8
Stonecutters	75	8
Labourers	40	8

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of a public building at Lloydminster, Sask. Name of contractors, Fred and John Shoquist, of Saskatoon, Sask. Date of contract, June 2, 1930. Amount of contract, $61,400.00 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters and joiners	$1 00	8
Bricklayers, hollow tile setters and stonemasons	$1 45	8
Cement finishers	1 00	8
Cement floaters	1 00	8
Cement mixer engineer (steam)	92½	8
Cement mixer engineer (gasoline)	50	8–10
Concrete workers	50	8–10
Electricians (wiremen)	1 00	8
Electricians' helpers	50–60	8
Labourers	45	8–10
Lathers (metal)	1 00	8
Marble setters	1 45	8
Painters and glaziers	95	8
Plasterers	1 45	8
Plasterers' helpers	65	8
Plumbers and steamfitters	1 15	8
Plumbers' and steamfitters' helpers	60	8
Roofers (felt and gravel)	80	8
Sheet metal workers	1 10	8
Sheet metal workers' improvers	75	8
Structural steel workers	1 00	8
Terrazzo layers	1 00	8
Terrazzo layers' helpers	60	8
Teamster with 2 horses and wagon	95	8–10
Truck driver (motor)	50	8–10

Construction of repairs and extensions to the public pier and warehouse. Name of contractors, Standard Construction Co., Ltd., Halifax, N.S. Date of contract, June 10, 1930. Amount of contract, approximately $178,093.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than	
	per day	per day	per week
Foreman	$7 00	9	54
Driver, horse & cart	4 50	9	54
Driver, team and wagon	7 00	9	54
	per hour		
Blacksmiths	60	9	54
Common labour	35	9	54
Skilled labour	40	9	54
Painters	60	9	54
Roofers	60	9	54
Carpenters	60	9	54
Wharf carpenters	50	9	54
Bricklayers	1 00	9	54

Construction of an extension to the breakwater wharf at Broad Cove Marsh, Inverness Co., N.S. Name of contractors, John D. McLeod, of Dunvegan, N.S., and D. M. McKay, of Chimney Corners, N.S. Date of contract, June 12, 1930. Amount of contract, approximately $8,459.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Carpenters	50	8
Blacksmiths	50	8
Common labourers	35	8
Skilled labourers	40	8
	per day	
Horse, cart & driver	5 00	8
Wagon, team & driver	7 00	8

Overtime may be permitted in case of necessity on the basis of time and one half.

Exceptions to the 8-hour day and overtime provisions will be recognized in preparatory and complementary work.

Construction of a public building at Sturgeon Falls, Ont. Name of contractor, Ludger Lacasse, of Sudbury, Ont. Date of contract, June 15, 1930. Amount of contract, $37,406.00 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than	Hours of labour not more than
	per hour	per day
Bricklayers	$1 15	9
Stonemasons	1 15	9
Hollow tile setters	1 15	9
Plasterers	1 15	9
Marble setters	1 15	9
Plumbers and steamfitters	75	9
Sheet metal workers	75	9
Carpenters and joiners	70	9
Concrete finishers	60	9
Electricians	75	9
Metal lathers	70	9
Structural steel workers	1 00	9
Terrazzo layers	1 05	9
Painters and glaziers	65	9
Felt and gravel roofers	70c. (for man in charge)	9
Ornamental iron workers	55	9
Plasterers' helpers	45	9
Plumbers' helpers	45	9
Steamfitters' helpers	45	9
Terrazzo layers' helpers	45	9
Sheet metal workers' helpers	45	9
Electricians' helpers	45	9
Concrete mixers and layers	40	9
Common labourers	40	9
Teamsters with team and wagon	70	9–10

Construction of additions and alterations to the public building at St. Hyacinthe, P.Q. Name of contractors, Pierre Paquet and Jean T. Godbout, St. Hyacinthe, P.Q. Date of contract, June 14, 1930. Amount of contract, $26,872.00 and unit prices. The General Fair Wages Clause was inserted in the contract.

Construction of a public building at La-Tuque, P.Q. Name of contractor, Zenon Ouellette, Rimouski, Que. Date of contract, June 11, 1930. Amount of contract, $21,770.00 and unit prices. The General Fair Wages Clause was inserted in the contract.

Dredging in Miramichi River, N.B. Name of contractors, Miramichi Dredging Co., Ltd., Newcastle, N.B. Date of contract, June 13, 1930. Amount of contract, approximately $23,-575.50. The General Fair Wages Clause was inserted in the contract.

Deepening and widening the channel leading to the wharf at Valleyfield, P.Q. Name of contractors, Les Chantiers Manseau, Limitée, of Sorel, P.Q. Date of contract, June 16, 1930. Amount of contract, approximately $46,400.00. The General Fair Wages Clause was inserted in the contract.

Deepening and widening channel at Coal Harbour, Vancouver, B.C. Name of contractors, North Western Dredging Co., Ltd., Vancouver, B.C. Amount of contract, approximately $125,590.95. The General Fair Wages Clause was inserted in the contract.

Dredging at Lunenburg, N.S. Name of contractors, Beacon Dredging Co., Ltd., Halifax, N.S. Date of contract, May 17, 1930. Amount of contract, approximately $72,387.15. The General Fair Wages Clause was inserted in the contract.

Dredging channel at Little Current Ont. Name of contractors, The Randolph Macdonald Co., Ltd., Toronto, Ont. Date of contract, June 4, 1930. Amount of contract, approximately $90,000.00. The General Fair Wages Clause was inserted in the contract.

Deepening a straight channel across the St. Louis Lagoon, lower St. Louis River, N.B. Name of contractors, Leger Bros., Mount Carmel, N.B. Date of contract, June 9, 1930. Amount of contract, approximately $6,660.00. The General Fair Wages Clause was inserted in the contract.

Repairing and painting public building at Atlin B.C. Name of contractor, John E. French, Whitehouse, Yukon Terr. Date of contract, May 31, 1930. Amount of contract, $6,100.00. A fair wages clause was inserted in the contract.

Contracts in Group "B" (Interior Fittings, etc.)

Construction and installation of interior fittings in public building, Ste. Rose, P.Q. Name of contractors, Canadian Office and School Furniture Co., Ltd., Preston, Ont. Date of contract, June 12, 1930. Amount of contract, $849.00. The General Fair Wages Clause was inserted in the contract.

Construction and installation of interior fittings in the public building at Vegreville, Alta. Name of contractor, Charles Gordon, Vegreville, Alta. Date of contract, June 18, 1930. Amount of contract, $1,100. The General Fair Wages Clause was inserted in the contract.

Installation of electric wiring and fittings in the public building at Bathurst, N.B. Name of contractors, Jones Electric Supply Co., Ltd., Saint John, N.B. Date of contract, June 4, 1930. Amount of contract, $850.00. The General Fair Wages Clause was inserted in the contract.

DEPARTMENT OF RAILWAYS AND CANALS

Contracts in Group "A" (Construction, etc.)

Manufacture of two steel stern spuds, complete with racking and points, for use with the Dipper Dredges on the Hudson Bay Railway Terminals at Fort Churchill, Man. Name of contractors, The Manitoba Bridge and Iron Works, Ltd., Winnipeg, Man. Date of contract, June 2, 1930. Amount of contract, $20,-675.00. The General Fair Wages Clause was inserted in the contract.

Construction of a reinforced concrete grain elevator plant at Churchill, Man. Name of contractors, Carter-Halls-Aldinger Co., Ltd., Winnipeg, Man. Date of contract, June 19, 1930. Amount of contract, $2,115,529.00. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages not less than per hour
Labour	$0 42½
Pile driving or skilled labour	55
Pile driving crew	60
Pile driving captain	70
Fireman	55
Pile driving engineer	90
Carpenters	90
Hoist runners	85
Locomotive crane operator	1 00
Plumbers	1 12½
Sheet metal workers	80
Bricklayers	1 35
Concrete finishers	70
Plasterers	1 35
Plasterers' helpers	55
Painters	85
Millwrights	90
Electricians	1 00
Caterpillar tractor driver	60
Structural steel workers	90

Time and one-half to be allowed for time over ten hours, and time and one-half for Sunday time.

POST OFFICE DEPARTMENT

Following is a statement of payments made in June, 1930, for supplies ordered by the Post Office Department under contracts which

were subject to the regulations for the suppression of the sweating system, the securing of payments to the workers of fair wages and the performance of the work under proper sanitary conditions:—

Making Metal Dating Stamps and Type, Brass Crown Seals, Cancellers, etc.

Pritchard-Andrews Co., Ltd., Ottawa, Ont.	$ 917 88

Making and Repairing Rubber Stamps, Daters, etc.

Pritchard-Andrews Co., Ltd., Ottawa, Ont.	$ 209 93
Capital Rubber Stamp Works, Ottawa, Ont.	10 55

Making up and Supplying Letter Carriers' Uniforms

Miner Rubber Co., Ltd., Granby, Que.	$ 402 29
Muir Cap & Regalia Ltd., Toronto, Ont.	13 89
Wm. Scully, Ltd., Montreal, Que.	2 25
Pollack & Dorfman, Quebec, P.Q.	14,626 32
E. Guillet & Sons Co., Marieville, P.Q.	97 21
Workman Uniform Co., Montreal, P.Q.	36 20
Grant-Holden-Graham, Ltd., Ottawa, Ont.	710 87
J. E. Lortie, Montreal, P.Q.	384 00

Mail Bag Fittings

Walter H. Wickware, Ottawa, Ont.	1,937 85
Parmenter & Bulloch Co., Ltd., Gananoque, Ont.	45 00
Ontario Equipment Co., Ottawa, Ont.	989 80

Scales

Pritchard-Andrews Co., Ltd., Ottawa, Ont.	137 55

Letter Boxes, etc.

Capital Brass Limited, Ottawa, Ont.	100 69
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	100 80

Stamping Ink, etc.

Pritchard-Andrews Co., Ltd., Ottawa, Ont.	22 55
J .E. Poole Co., Toronto, Ont.	166 94

Satchels

Hugh Carson Co., Ltd., Ottawa, Ont.	3,388 18

Old Age and Invalid Pensions in Australia

In accordance with the provisions of the Invalid and Old Age Pensions Act, the Government of the Commonwealth of Australia has published its annual report on invalid and old age pensions. The report, which is for the twelve months ended June 30, 1929, presents a comprehensive review of the administration of the Act.

A review of the pension legislation in effect in Australia was given in the LABOUR GAZETTE for September 1929, page 967. The Commonwealth commenced to pay Old-age Pensions on July 1, 1909. That portion of the Act which authorizes payment to women on attaining the age of 60 years came into operation on December 15, 1910.

Tabular statistics indicate that the total number of pensions current on June 30, 1929, was 204,541. Of this total, 145,393 were old age, and 59,148 were invalid pensions. During the year, there were granted 18,712 claims for old age pensions, and 8,599 claims for invalid pensions. In 1928-29, the total payments to pensioners and benevolent asylums and hospitals for maintenance of pensioners was £10,124,239. The average number of pensioners for each 10,000 of the population is given as 224 for old age and 93 for invalid pensioners.

Unemployment in Trade Unions in Australia

The *Quarterly Summary of Australian Statistics*, published at Canberra by the Commonwealth Bureau of Census and Statistics, in the section on labour and industrial statistics, gives figures of trade union membership, and the percentage of union members who were unemployed for each year from 1924 to the first quarter of 1930. These percentages were as follows:—

1924	8·9
1925	8·8
1926	7·1
1927	7·0
1928	10·8
1929	11·1
1930 (1st quarter)	14·6

The United States Bureau of Labour Statistics has published Bulletin No. 514, in its Wages and Hours of Labour Series, on "Pennsylvania Railroad Wage Data." Certain employees of the maintenance of way and other departments of the Pennsylvania Railroad made a request for increases of their October 1, 1927, wage rates. A joint fact finding committee, consisting of four representatives of the railroad management and also of four representatives of the employees of the railroad, was appointed to obtain and tabulate information to be used in arriving at a decision. The report of the committee contained comprehensive statistics regarding wages paid by the various companies comprising the Pennsylvania Railroad regional system. These wage statistics are reproduced, almost in full, in this bulletin.

AGREEMENTS AND CHANGES IN WAGES AND WORKING CONDITIONS FOR CLERKS, FREIGHT HANDLERS, ETC., ON RAILWAYS IN CANADA

IN the LABOUR GAZETTE, December, 1929, page 1419, reference was made to new agreements and changes in working conditions for various classes of railway employees, and it was noted that for clerks, freight handlers, etc., proposals for changes had been made and were under consideration.

CLERKS, FREIGHT HANDLERS, ETC., CANADIAN PACIFIC RAILWAYS.—A dispute between the railway company and its clerks, freight handlers, etc., members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, was referred to a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act in June, 1929. The report of the Board, with a minority report, was published in the LABOUR GAZETTE, May, 1930, page 491. In the meantime the representatives of the employees and of the company had continued negotiations as to some of the points in dispute, namely, changes in rules and the adjustment of inequalities. The Board report, therefore, dealt with a general increase in wages of six cents per hour, with equivalent increases for classes not on hourly rates. The Board recommended against any increase, but the minority report, signed by the member representing the employees, held that the claims of the employees should be met. No general increases in wages were made, but agreements were reached between the employees and the company, covering Eastern and Western lines, providing for changes in rules and working conditions and adjustments in wage rates for various classes and positions. The chief changes were to provide increases of $10 per month for certain freight checkers on Eastern lines, and by putting them on a monthly basis to give them two weeks holidays with pay each year. For some other positions increases were as high as $15 per month. These changes became effective on May 16, 1930. Separate agreements as to stores employees were made effective on the same date, similarly amending existing agreements.

CLERKS, FREIGHT HANDLERS, ETC., CANADIAN NATIONAL RAILWAYS.—Agreements covering the various regions, amending existing rules, and providing for the adjustment of inequalities, were reached by the railway company and representatives of the employees, members of the Canadian Brotherhood of Railway Employees. The adjustment of inequalities was to be worked out by committees and is reported to have been completed in the spring of 1930.

CLERKS, FREIGHT HANDLERS, ETC., DOMINION ATLANTIC RAILWAY.—A dispute as to wages and working conditions between these classes of employees, members of the Brotherhood of Railway and Steamship Clerks, Freight Handlers, Express and Station Employees, and the railway company, was referred to a Board under the Industrial Disputes Investigation Act in August, 1929, the Board being completed on September 16, 1929 (LABOUR GAZETTE, October, 1929, page 1081). The Board has not yet made its report.

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both employers and employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour, and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given with other information of general interest.

Manufacturing: Pulp, Paper and Paper Products

KENORA, ONTARIO.—KENORA PAPER MILLS LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PAPER-MAKERS, LOCAL NO. 238.

Through conciliation by the Department of Labour, the agreement which came into effect May 1, 1927, and was summarized in the LABOUR GAZETTE, October, 1927, page 1100, and later renewed with wage adjustments as noted in the LABOUR GAZETTE, August, 1929, page 924, has been renewed to April 30, 1931, with the following adjustment:—

According to the terms of the 1927 agreement, wages of machine help are to be increased if the speed of the machine is increased. The minimum rates per hour as reported in June, 1930, are as follows: No. 1 machine—boss machine tenders $1.83, machine tenders $1.54, back tenders $1.36, third hands $1.04, fourth hands 65 cents, fifth hands 55 cents, sixth hands 41 cents; No. 2 machine—boss machine tenders $1.83, machine tenders $1.63, back tenders $1.45, third hands $1.06, fourth hands 68 cents, fifth hands 58 cents, sixth hands 44 cents; beater engineer 90 cents.

The wages of other classes are the same as in 1927, namely: head clothing man $1.10 per hour, head oiler 70 cents, oilers 59 cents, rewinder man 65 cents.

KENORA, ONTARIO.—KENORA PAPER MILLS LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, LOCAL NO. 133.

The agreement which came into effect May 1, 1927, and was summarized in the LABOUR GAZETTE, November, 1927, page 1237, was renewed with minor changes in working conditions in 1928 to April 30, 1930. Through conciliation by the Department of Labour this agreement has been renewed without change to April 30, 1931.

FORT FRANCES, ONTARIO.—FORT FRANCES PULP AND PAPER COMPANY LIMITED AND THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, LOCAL NO. 92.

Through conciliation by the Department of Labour, the agreement which came into effect May 1, 1926, and was summarized in the LABOUR GAZETTE, September, 1926, page 906, and later amended as noted in the LABOUR GAZETTE for July, 1929, page 803, has been renewed verbally to April 30, 1931.

Manufacturing: Printing and Publishing

PETERBOROUGH, ONTARIO.—EMPLOYING PRINTERS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 248.

Agreement to be in effect from March 1, 1930, to February 28, 1933.

Only local union members to be employed.

Overtime: time and one-half; work on Sundays and holidays double time except when part of regular shift on newspapers.

One apprentice allowed for every four journeymen or fraction thereof. Apprentices must be at least sixteen years old and must have a fair common school education. They will serve five years and will be examined yearly by the apprentice committee of the union. An apprentice after he has become a union member will not be discharged for any reason except neglect of duty or violation of office rules. Apprentices must complete the course in printing of the International Union.

Wages per week for apprentices: first six months $7.50, second six months $8.50, third six months $9.50, fourth six months $10.50, third year $13, fourth year one-half of journeyman's scale, fifth year two-thirds of journeyman's scale.

The union reserves the right to refuse to execute struck work received from or destined for unfair employing printers.

Foreman to have the right to employ and discharge help for certain specified reasons, provided that when the staff is reduced, the persons last employed will be laid off first, and when reinstated, they shall be employed in the reverse order.

Anything not provided in the agreement shall be governed by the laws of the union.

Newspaper Department

Hours: 8 per day, a 48-hour week for day work and 44 hours for night work.

Wages per week for foremen, linotype machinists and machinist operators: from March 1, 1930 to February 28, 1931, $37.70; from March 1, 1931, to February 28, 1932, $38.70; from March 1, 1932, to February 28, 1933, $39.70.

Wages per week for hand compositors, stone hands, proof-readers, machine operators: from March 1, 1930, to February 28, 1931, $35.70; from March 1, 1931, to February 28, 1932, $36.70; from March 1, 1932, to February 28, 1933, $37.70.

Book and Job Department

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Wages per week for foremen, linotype machinists and machinist operators: from March 1, 1930, to February 28, 1931, $35; from March 1, 1931, to February 28, 1932, $36, from March 1, 1932, to February 28, 1933, $37.

Wages per week for hand compositors, stone hands, binders and machine operators: from March 1, 1930, to February 28, 1931, $33; from March 1, 1931, to February 28, 1932, $34; from March 1, 1932, to February 28, 1933, $35.

REGINA, SASK.—CERTAIN EMPLOYERS AND THE INTERNATIONAL BROTHERHOOD OF BOOKBINDERS, LOCAL NO. 205.

Agreement to be in effect from May 1, 1930, to April 30, 1933.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for July, 1928, with the exception that the men's scale of wages has been altered.

Wages for journeymen bookbinders: $1 per hour. The rate of wages for men apprentices and for women remains unchanged.

REGINA, SASK.—DAILY NEWSPAPER PUBLISHERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL NO. 75.

Agreement to be in effect from May 1, 1930, to May 1, 1931, and from year to year thereafter unless notice is given by either party thirty days prior to May 1 in any year.

Only local union members to be employed. The man in charge of a pressroom shall also be a union member and shall hire and discharge all help, subject to the management.

Hours: 8 per day, 6 days per week for day work or 7½ hours, six nights per week for night work.

Overtime: on evening papers all work over 8 hours, time and one-half and after 12 hours double time; on morning papers all work over

7½ hours, time and one-half and over 11 hours, double time. Double time for work on Sundays and holidays.

Wages per week: journeymen pressmen $47.04 for day work and $50.04 for night work.

Wages per week for apprentices: first year $17, second year $20, third year $24, fourth year $30, fifth year $34.

Any dispute which cannot be settled by conciliation will be referred to an arbitration board consisting of two members of each party and a fifth chosen by them, the decision of this board to be final and binding.

REGINA, SASK.—CERTAIN JOB OFFICES AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL NO. 75.

Agreement to be in effect from May 1, 1930, to April 30, 1931.

Only union members to be employed if available. The foreman must also be a union member. If staff is decreased, those last employed will be laid off first, but if staff again increased within 90 days those laid off will be reemployed before others. Employers will not take work for any firm that does not employ members of the union and the union will not allow its members to work in non-union shops, except by mutual consent.

Hours: 8 per day, 4 on Saturdays, a 44-hour week for day work; night work 42 hours per week.

Overtime: time and one-half for first three hours, double time thereafter; double time for work on Sundays. For work on holidays, time and one-half for first three hours with double time thereafter, except in case of morning newspapers where instead of overtime rate, the night's work on a holiday will consist of five hours and will be paid for 7 hours.

Wages per week: foreman in charge of one or two cylinder presses $46.05, foreman in charge of three or more cylinder presses $48.95, foreman in charge of one cylinder and three platen presses constitutes a combination job $46.05, journeyman pressman operating two cylinder presses $43.15, foreman in charge of offset presses $48.95, journeyman offset pressman $45.10, offset assistant $35.45, cylinder assistant $32.20, cylinder assistants working in combination shop and working part time on platens $25.95, foreman in charge of one to four platen presses $42.20, foreman in charge of five or more platen presses $47.05, journeyman platen pressman $40.45. Wages for platen feeders to be left to discretion of the foreman.

Any dispute will be settled by a board of arbitration consisting of two members of each party and a fifth chosen by them, the award of this board to be final.

EDMONTON, ALBERTA.—TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL STEREOTYPERS' AND ELECTROTYPERS' UNION, LOCAL NO. 129.

Agreement to be in effect from May 27, 1929, to May 26, 1932. Either party may open negotiations for a new agreement 30 days before the expiration date.

Only union members to be employed, if available. But if none available others may be employed and will later be admitted to the union, if eligible.

Hours: 45 per week for both day and night work.

Overtime: time and one-half for first three hours; double time thereafter and for work on Sundays except when part of regular shift. Dominion Day, Labour Day and Christmas Day a full holiday will be allowed and paid for. Any work on these days will be paid for at time and one-half extra. Time and one-half for work on other specified holidays. The night preceding a holiday shall be considered the holiday for the night crew.

Wages per hour for journeyman stereotypers and electrotypers: from May 27, 1929, to May 26, 1931, $1.05 for day work and $1.11⅔ for night work; from May 27, 1931, to May 26, 1932, $1.06⅔ for day work and $1.13⅓ for night work. If any lower scale of wages or other concession is accepted from any other daily newspaper publishers in the city, the same lower scale will apply in the office signing this agreement.

No apprentice will be allowed unless two journeymen are regularly employed. Any duly registered apprentice who loses his position through no fault of his own will be given the first vacancy.

Wages for apprentices: $12 per week for day work for first year, one-third of journeymen's scale for second year, one-half of journeymen's scale for third year, two-thirds for fourth year and three-quarters for fifth year.

Two weeks notice will be given of resignation or dismissal.

The union reserves the right to refuse to execute struck work received from or destined for unfair local employers.

All disputes will be referred to a board of arbitration consisting of two members of each party and a fifth chosen by them. If the matter cannot be settled by such local conciliation or arbitration it will then be submitted to arbitration as provided for in the International Arbitration Agreement effective May 1, 1917, between the American Newspaper Publishers' Association and the International Stereotypers' and Electrotypers' Union.

Manufacturing: Miscellaneous Products

TORONTO, ONTARIO.—A CERTAIN MATTRESS MANUFACTURING AND UPHOLSTERING ESTABLISHMENT AND THE UPHOLSTERERS' CARPET AND LINOLEUM MECHANICS' INTERNATIONAL UNION, LOCAL NO. 30.

Agreement to be in effect from February 2, 1930, to February 1, 1931, and from year to year until notice is given by either party 30 days before February 2 of any year.

Only union members to be employed if available. If none available other upholsterers may be employed and subsequently retained if they join the union.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. In the slack season the shop committee may alter the hours so as to give journeymen and apprentices the maximum of freedom without interfering with production.

No overtime or work on Sundays or holidays except with the consent of the shop committee. Work on Saturday afternoons to be paid at time and one half.

Wages: The shop committee will decide what work will be done on an hourly basis and what

on a piece-work basis. All work done on an hourly basis will be paid at the rate of $1 per hour. A schedule of the rates of wages for piece work forms part of the agreement.

The number of apprentices is limited to one for every twenty-five journeymen upholsterers employed. When once employed they shall be continued in employment to conclusion of their apprenticeship. Apprentices must belong to the union and will serve three years.

Wages per week for apprentices: $10 during first six months, $15 during second six months, $20 during second year, $25 during third year.

A shop committee consisting of union employees of the Company will be appointed by the union and this committee will have the right to distribute all work with due regard to the wishes of the company who may appeal the decision of the shop committee to a board of arbitration consisting of one member of each party and a third chosen by them. The shop committee will co-operate with the Company in a time of rush work by adding to the staff, working overtime, etc. The shop committee will have charge of work done in the shop and shall supervise each man's work and in a general way be responsible for the efficiency of the shop, the quality of the work, etc.

The number of journeymen to be employed shall be decided by the Shop Committee provided that in case of reduction in staff those discharged or laid off shall be those who were most recently engaged. No journeymen shall be engaged without the consent of the shop committee, and when new men are required they will be engaged through the union secretary.

No man will be discharged unless agreed to by both the shop committee and the company.

All work done by the company must be done at its plant and the company will not have upholstery work done outside or deal in upholstery products of another manufacturer without the consent of the shop committee.

Any dispute will be settled by a board of three arbitrators, or if they fail to agree then it shall be settled in accordance with the Ontario Arbitration Act. There shall be no strike or lockout pending such arbitration and the decision of the board will be final and binding.

Mining, Non-ferrous Smelting and Quarrying: Non-metallic Mineral Mining and Quarrying

GRANITEVILLE, QUEBEC.—CERTAIN QUARRY MASTERS AND THE PAVING CUTTERS' INTERNATIONAL UNION, LOCAL NO. 60.

Agreement to be in effect from January 1, 1930, to December 31, 1932. Either party desiring a change will give three months' notice prior to the expiration date.

Only union members or those eligible to become such to be employed.

A schedule of piece rates is given, providing that should anything arise that the average paving cutter cannot make a standard rate of pay through rough stone or other cause, the prices will be adjusted while such conditions prevail.

All day work to be paid at $1 per hour with an 8 hour day and 4 hours on Saturdays.

MONTREAL, QUEBEC.—CERTAIN EMPLOYERS AND THE NATIONAL CATHOLIC UNION OF LATHERS OF MONTREAL.

Agreement to be in effect from July 1, 1929, to July 1, 1930.

Employers agree to recognize the union and to employ only union members.

The working day is not to begin before 7 a.m. nor end after 6 p.m.

For work on Sundays and holidays, double rates will be paid.

A schedule of piece rates is included and also a schedule of minimum rates for the employer.

The employer is not to undertake any work at less than these specified rates and the union members will not work for less than their schedule of rates. Union members also agree not to work directly for general contractors.

For work out of the city, travelling expenses and board to be paid by the employer.

Any dispute over the agreement will be settled by conciliation by the representative of the employer and the business agent of the union.

MONTREAL, QUEBEC.—MASTER PLUMBERS' ASSOCIATION OF MONTREAL AND VICINITY AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL 144.

Agreement to be in effect from May 1, 1929, to April 30, 1933. The negotiation committee of both associations will meet on October 1, 1932, to discuss a new agreement and an understanding to be reached for the first day of the year 1933.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for February, 1928, page 199, with the following changes:—

Members of the Masters Plumbers' Association will be furnished with mechanics by the union in preference to outside master plumbers or general contractors.

The clause prohibiting curtailment of work by the union has been omitted.

Wages per hour for plumbers and steamfitters: from May 1, 1929, to April 30, 1930, 85 cents; from May 1, 1930, to April 30, 1931, 90 cents; from May 1, 1931, to April 30, 1933, $1.

If the union is unable to furnish men and employers employ non-union men they may be kept on the job for which they were hired until it is finished.

TORONTO, ONTARIO.—TORONTO CHAPTER OF MASTER PAINTERS AND DECORATORS AND THE NATIONAL UNION OF PAINTERS, DECORATORS AND PAPERHANGERS, JUBILEE LOCAL NO. 1.

Similar agreements covering the same period and the same wage rates have also been signed by this union and a number of individual contractors.

Agreement to be in effect from May 1, 1930, to April 30, 1932. Negotiations for any new agreement will begin not later than December 31, 1931.

Preference to be given to members of the National Union at all times.

Hours: 8 per day, 4 on Saturdays.

Overtime: time and one half to midnight on other days and until 5 p.m. on Saturdays; there-

after and all work on Sundays and holidays, double time. No work on Labour Day. Work requiring two or three shifts to be paid at regular rate.

Wages for journeymen members of the union to be 85 cents per hour for first year of the agreement and 90 cents per hour during second year.

For work out of the city, fare, travelling time and board to be paid by the employer.

No piece work or sub-contracting or contracting by the men will be allowed.

Any dispute which cannot be settled by the employer and the union will be referred to a conciliation board consisting of three members of each party, this board to meet within 48 hours and report its decision; in case of disagreement, a disinterested arbitrator will be appointed by the committee whose finding will be binding.

TORONTO, ONTARIO.—CONTRACTING PLASTERERS' ASSOCIATION OF TORONTO AND THE INTERNATIONAL HOD CARRIERS, BUILDING AND COMMON LABOURERS' UNION, LOCAL NO. 781.

Agreement to be in effect from May 1, 1930, to April 30, 1932.

The contractors agree to recognize the union. If the union is unable to supply sufficient men, the contractors may employ unskilled labour until the union can supply them. Proficient men will be allowed to join the union at an initiation fee not in excess of $20.

Overtime will be paid only when attending plasterers, for which time and one half will be paid; Saturday morning not to be considered as overtime.

Wages for plasterers' labourers: 80 cents per hour.

An arbitration board consisting of five representatives of each party will be formed to settle all disputes.

TORONTO, ONTARIO.—TORONTO PLUMBING AND HEATING CONTRACTORS' UNION AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL NO. 46.

The agreement which came into effect in May, 1929, and was printed in the LABOUR GAZETTE, June, 1929, page 679, has been amended to provide for a 40-hour week, that is, 8 hours per day from Monday to Friday and no work on Saturdays. The agreement as thus amended will be in effect to April 30, 1931, and from year to year until either party gives notice 30 days before April 30, of any year.

The 40-hour week was also in effect, by mutual understanding, during July and August, 1929.

TORONTO, ONTARIO.—TORONTO SOCIETY OF DOMESTIC, SANITARY AND HEATING ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL NO. 46.

The clauses of this agreement which was signed May 9, 1930, are given in full as follows:—

Clause 1—The ordinary hours of labour on Monday to Friday inclusive will be from 8 o'clock a.m. to 5 o'clock p.m. with one hour for lunch.

Clause 2—The minimum rate of wages will be $1.25 per hour, payable in cash.

Clause 3—The minimum rate of wages for the 5th year junior mechanics will be 85 cents per hour

Clause 4—All overtime will be paid for at the rate of double time. All work shall count as overtime which is done other than the ordinary hours, and which is not otherwise provided for, including Sundays and the following holidays:—New Year's Day, Good Friday, Victoria Day, Civic Holiday, Dominion Day, Picnic Day, Labour Day, Thanksgiving Day and Christmas Day.

If finishing up a repair job on regular working days, if to finish will not take more than one hour's time, it will be done at the regular rate of wages.

Clause 5—In the event of men being required for emergency work or setting sleeves or inserts on Saturday mornings, they shall be obtained through the Business Agent and report the night previous, and shall be paid the regular rate of wages from 8 a.m. to 12 a.m. noon.

Men instructed to report for work on Saturday mornings will be paid a minimum of two hours single time.

Clause 6—Journeymen required on out-of-town work and sent out of Toronto in charge of work or to act as foreman or superintendent, shall have their fare and board paid, and time travelling to and from such work shall be paid for at the rate of single time, but only up till 9 p.m. If travelling at night, a sleeper to be provided.

If the job is within a radius of 200 miles of Toronto such workmen will be paid their fare, home and back, for a week-end at least once a month.

Other journeymen required on such work will only receive the rate of wages as per this agreement, and will be allowed transportation and travelling time to and from such work.

If the journeyman leaves the job before completion and of his own volition, transportation and travelling time returning to Toronto may be withheld.

In going to work outside the city limits and returning daily the workman shall be at the city limits at 8 a.m. and 5 p.m. and shall receive transportation from the city limits to and from such work.

On out-of-town work from which the men cannot return daily they may work 8 hours on Saturday at the regular rate of wages.

Clause 7—The parties of the first part agree that only members of the United Association will be employed on work under the jurisdiction of this Local Union. If the Local Union is unable to furnish skilled mechanics, then the employer has the privilege of employing skilled plumbers and skilled steamfitters as required.

Clause 8—No workman will be employed to do any work in Toronto in connection with Sanitation or the City Water System who is not in possession of a City Licence under by-law 102, section 23940 and by-law 6388, section 70, or as the same may have been or may be replaced or amended.

Clause 9—That only members of Local Union 46 and duly indentured apprentices under the Ontario Apprenticeship Act shall handle any tools of the trade.

Clause 10—One junior mechanic only to be allowed on any job to each branch of the trade except where there are more than five journeymen plumbers or five journeymen steamfitters employed and then one additional junior

mechanic may be allowed to each additional five journeymen plumbers or five journeymen steamfitters.

Clause 11—The respective parties to this agreement agree to control the number of journeymen brought out each year, through control of the number of apprentices employed. Their number will not exceed 24 per year. 14 plumbers and 10 steamfitters, who shall serve five years' apprenticeship, four years under the supervision of a journeyman, and one year as a junior mechanic. Each must be registered with the Local Union. The parties hereto will observe and enforce all of the provisions of the law of Ontario as to apprentices.

Clause 12—All pipecutting machines on the building or jobs will be operated by members of Local Union 46.

Clause 13—All brasswork to be tinned by members of Local Union 46 or indentured apprentices.

Clause 14—All boiler trimmings, the erection of cast iron sectional boilers, setting up and connecting of all vento radiators or coils, all connections to pumps and humidifiers, shall be done by members of Local Union 46.

Clause 15—In the event of it becoming necessary to work shift work on any job, same will be permitted providing such shifts continue for a period of not less than one week on new work and not less than two weeks on old work, and shall commence at the close of the regular working day, and shall be paid for at the rate of eight hours' time for six hours' work. But no workmen will be allowed to work two continuous shifts or part of a shift in any calendar day under this rule.

Clause 16—A Joint Conference Board will be formed of five employers and five members of the Local Union who shall meet regularly once a month at which meeting three members of each party will form a quorum. Such board shall have power on behalf of the respective parties hereto to adjust trade disputes or grievances between the parties hereto or their members or any or either of them.

Clause 17—In case of any such dispute or grievance arising which cannot be adjusted informally by representatives of the parties hereto, it will be referred to such Joint Conference Board and such board, if necessary, shall meet within 48 hours.

Clause 18—In the event of a dispute arising which cannot be settled satisfactorily by the Joint Conference Board or any violation of this agreement, that before any definite action is taken, the matter must be referred to the general office of the United Association and no strike or lockout shall take place until an officer of the said association has investigated the matter, and rendered a decision.

Clause 19—This agreement shall become effective upon the execution thereof by both the parties hereto, and it shall remain in effect until the thirtieth day of April, 1931. Should either party hereto desire to make at the conclusion of this agreement, a different agreement in substitution herefor, that party agrees to give the other not less than one month's notice in writing, to terminate on the thirty-first day of March provided that no such notice is given in time by either party. This agreement shall remain in force from year to year until such notice is given as hereinbefore provided. If and when any such notice is given, a joint committee shall be forthwith formed consisting of equal representation of each of the parties hereto and such joint committee shall during such period of notice convene, consider and announce its decision or failure to reach a decision upon the matter of such proposed new agreement.

HAMILTON, ONTARIO.—EMPLOYING PLASTERERS AND THE OPERATIVE PLASTERERS AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, LOCAL NO. 298.

Agreement to be in effect from May 1, 1930, to April 30, 1932. A committee will be appointed 90 days before expiration date to consider renewing or revising this agreement.

This agreement is the same as the one previously in force and summarized in the LABOUR GAZETTE, November, 1928, page 1262, with the exception of the wage rate for journeymen plasterers and cement finishers which is $1.25 per hour. This rate came into effect May 1, 1929, and was noted in the LABOUR GAZETTE, August, 1929, page 926.

NIAGARA FALLS, ONTARIO.—CERTAIN CONTRACTORS AND THE BRICKLAYERS, MASONS AND PLASTERERS' UNION, NO. 27.

The verbal agreement which came into effect May 1, 1929, and was summarized in the LABOUR GAZETTE, October, 1929, page 1160, has been renewed verbally without change to May 1, 1931.

THOROLD, ONTARIO.—THE BUILDERS' EXCHANGE, MASTER CARPENTERS OF THOROLD AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL NO. 1677.

Agreement to be in effect from May 1, 1929, to April 30, 1931. If either party desires change, four months' notice to be given before expiration date, and an effort will be made to reach a decision by March 1.

This agreement is the same as the one previously in force and summarized in the LABOUR GAZETTE, July, 1927, page 790, with the following exception:

Wages for journeymen carpenters: $1 per hour.

WINDSOR, ONTARIO.—EMPLOYERS CONTRACTORS' ASSOCIATION AND CONTRACTORS AND THE OPERATIVE PLASTERERS AND CEMENT FINISHERS' INTERNATIONAL ASSOCIATION, LOCAL NO. 345.

Agreement to be in effect from May 1, 1930, to May 1, 1931.

This agreement is the same as the one previously in force and summarized in the LABOUR GAZETTE, May, 1926, page 501, and which was amended and noted in the LABOUR GAZETTE, July, 1929, page 806.

Wages for journeymen plasterers remain at $1.50 per hour with a 44-hour week.

WINDSOR, ONTARIO.—CERTAIN MASTER PLUMBERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL NO. 552.

Agreements signed with individual employers following the strike which was reported in the LABOUR GAZETTE, June, 1930, page 645.

Agreements to be in effect from May 1, 1930, to April 30, 1931, and for another year unless notice is given thirty days before the expiration date.

Hours: 8 per day; 4 on Saturdays. As soon as other trades adopt the 5-day week, this union will not work on Saturday mornings.

Overtime: all work done during other than ordinary working hours or on Saturday afternoons, Sundays or holidays shall be paid for at double time.

Wages for journeymen plumbers and steamfitters, $1.35 per hour. Any workman superintending the work of three or more other workmen shall receive 10 cents per hour more than minimum rate.

Plumbers will not do nor be required to do steamfitting when steamfitters are available, nor steamfitters to do plumbing work when plumbers are available.

One apprentice to each branch of the trade will be allowed on any job except where more than five plumbers or five steamfitters are employed, then one additional apprentice will be allowed to each additional five journeymen plumbers or journeymen steamfitters. The Apprentice Act to be strictly adhered to.

For work out of Border Cities, fare and board to be paid and travelling time at single time up to 10 p.m. Workman will be paid his fare home and back for a week-end at least once a month.

Transportation and Public Utilities: Street and Electric Railways

MOOSE JAW, SASKATCHEWAN.—MOOSE JAW ELECTRIC RAILWAY COMPANY AND THE AMALGAMATED ASSOCIATION OF STREET AND ELECTRIC RAILWAY EMPLOYEES, LOCAL NO. 614.

Agreement to be in effect from June 1, 1930, to June 1, 1931, and from year to year unless 30 days' notice is given by either party before expiration date.

This agreement which was signed following conciliation by the board under the Industrial Disputes Investigation Act, 1907, is printed in full with the report of this board on page 750 of this issue.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JUNE, 1930

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again downward, the weekly family budget in terms of retail prices being slightly lower, while the Dominion Bureau of Statistics index number of wholesale prices showed a substantial decline.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was $11.10 at the beginning of June, as compared with $11.17 for May; $10.92 for June, 1929; $10.73 for June, 1928; $10.86 for June, 1927; $11.06 for June, 1926; $10.44 for June, 1925; $9.86 for June, 1924; $10.23 for June, 1923; $10.18 for June, 1922; $11.16 for June, 1921; $16.92 for June, 1920 (the peak); $12.79 for June, 1918; and $7.49 for June, 1914. The prices of milk, butter, cheese, flour, tea, veal and mutton were lower, while the prices of beef, fresh pork, eggs and potatoes were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged $21.44 at the beginning of June, as compared with $21.49 for May; $21.18 for June, 1929; $20.97 for June, 1928; $21.04 for June, 1927; $21.31 for June, 1926; $20.67 for June, 1925; $20.22 for June, 1924; $20.72 for June, 1923; $20.58 for June, 1922; $21.74 for June, 1921; $26.92 for July, 1920 (the peak); $20.36 for June, 1918; and $14.27 for June, 1914. Fuel was little changed, while rent was slightly higher in the average.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again lower at 88 for June, as compared with 89·9 for May; 93·5 for June, 1929; 96·9 for June, 1928; 98·7 for June, 1927; and 100·1 for June, 1926. One hundred and twenty-six prices quotations were lower, twenty-two were higher and three hundred and fifty-four were unchanged.

In the grouping according to chief component materials all of the eight main groups were lower, the Vegetables and Vegetables Products group, due mainly to lower prices for grains, flour, tea and rubber; the Animals and their Products group, because of lower prices for steers, calves, milk, butter and eggs, which more than offset advances in the prices of hogs, lambs and hides; the Fibres, Textiles and Textile Products group, due mainly to decreases in the prices of cotton, silk, hemp and jute, which more than offset higher prices for wool; the Wood, Wood Products and Paper group, due to lower prices for certain lines of lumber; the Iron and its Products group, because of declines in the prices of automobile body plates, steel sheets and scrap steel; the Non-Ferrous Metals and their Products group, due to lower quotations for silver, copper, brass sheets, tin and zinc; the Non-Metallic Minerals and their Products group, due chiefly to

(Continued on page 854)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

* Prior to 1926 number of commodities was 236.

(Continued from page 846)

lower prices for fuel oil and cement; and the Chemicals and Allied Products group, because of lower prices for copper sulphate, calcium chloride, shellac and citric acid.

In the grouping according to purpose both consumers' goods and producers' goods were substantially lower, the former due mainly to declines in the prices of flour, tea, foreign fruits, eggs, milk and butter, and the latter due to lower prices for materials for the textile and clothing industries, for the metal working industries, for the meat packing industries, for the milling and other industries, as well as for miscellaneous producers' materials.

In the grouping according to origin, raw or partly manufactured goods declined because of lower prices for grains, tea, steers, milk, eggs, copper, tin and silver, which more than offset higher prices for hides, raw sugar and raw wool. Fully and chiefly manufactured goods were also lower, because of lower quotations for leather, butter, copper wire, brass sheets, cement, cotton yarn and bread. Domestic farm products, articles of forest origin and articles of mineral origin declined, while articles of marine origin were slightly higher.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of June, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry, starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the LABOUR GAZETTE a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the LABOUR GAZETTE, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1928, and monthly since January, 1929. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141·4; 1905, 135·6; 1910, 118·1; 1911, 113·4; 1912, 109·1; 1913, 100·0; 1914, 96·5; 1915, 90·3; 1916, 86·3; 1917, 84·6; 1918, 82·9; 1919, 81·6; 1920, 81·1; 1921, 81·4; 1922, 80·1; 1923, 77·7; 1924, 76·5; 1925, 73·8; 1926, 73·2; 1927, 70·9; 1928, 69·3; 1929, 67·3; 1930, 65·5.

CHANGES IN THE COST OF LIVING IN CANADA FROM 1913 TO 1930*

*The figures for "all items" were calculated by giving the following weights to each group: Food 35%; Fuel 8%; Rent 18½%; Clothing 18½%; Sundries 20%.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318) and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73·8; 1924, 72·2; 1925, 69·9; 1926, 68·7; 1927, 68·2; 1928, 67·1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98·3; 1915, 98·1; 1916, 96·3; 1917, 100·7; 1918, 107·4; 1919, 111·1; 1920, 125·4; 1921; 143·6; 1922, 140·6; 1923, 135·7; 1924, 134·6; 1925, 131·6; 1926, 131·1; 1927, 129·4; 1928, 127·8. Natural gas 1913, 100; 1914, 107·0; 1915, 112·5; 1916, 112·5; 1917, 113·9; 1918, 114·0; 1919, 116·1; 1920, 125·1; 1921, 137·6; 1922, 163·2; 1923, 163·0; 1924, 162·2; 1925, 179·3; 1926, 172·4; 1927, 165·9; 1928, 158·6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125·8; 1901, 125·8; 1902, 125·8; 1903, 125·2; 1904, 123·9; 1905, 120·1; 1906, 107·5; 1907, 108·8; 1908, 106·9; 1909, 105·7; 1910, 103·8; 1911, 99·4; 1912, 106·6; 1913, 100·0.

Retail Prices

The advance in beef prices, in progress since the beginning of the year, was continued in June, sirloin steak being up from an average of 37·3 cents per pound in May to 38 cents in June; round steak from 32·3 cents per pound in May to 32·9 cents in June; rib roast from 30·5 cents per pound in May to 30·8 cents in June; and shoulder roast from 24 cents per pound in May to 24·3 cents in June. Veal was down from an average of 24·4 cents per pound in May to 24·1 cents in June and mutton from 32·3 cents per pound in May to 31·9 cents in June. Fresh pork was slightly higher, averaging 30·8 cents per pound. In fresh fish halibut and white fish were lower.

Eggs showed a seasonal advance, fresh being up from an average of 35·1 cents per dozen in

May to 35·6 cents in June and cooking from 31·1 cents per dozen in May to 31·7 cents in June. Increases were reported from most localities. Milk declined from an average price of 12·4 cents per quart in May to 12 cents in June. Lower prices were reported from Three Rivers, St. Hyacinthe, Thetford Mines, Montreal, Hull, Ottawa, Oshawa, Toronto, Hamilton, Woodstock, Owen Sound, Sault Ste. Marie, Port Arthur, Fort William, Prince Albert, Edmonton, Calgary and Lethbridge. Lower prices for butter were reported from most localities, dairy being down from an average of 36·6 cents per pound in May to 34·8 cents in June and creamery fom 40·1 cents per pound in May to 38·7 cents in June. Cheese was also slightly lower at an average price of 32·6 cents per pound.

Lower prices for bread were reported from New Glasgow, Guelph and Owen Sound. Flour showed a slight decrease, averaging 4·9 cents per pound. Onions rose from 5·4 cents per pound in May to 6·5 cents in June. Potatoes also showed an increase, averaging $2.71 per ninety pounds in June, as compared with $2.66 in May. Granulated sugar showed a slight decrease in most localities and the price in the average was down from 6·9 cents per pound in May to 6·8 cents in June. Tea again showed a substantial decrease, declining from an average price of 65·8 cents in May to 60·5 cents in June. The price at the beginning of the year was 70·4 cents per pound. Anthracite coal was slightly lower at $16 per ton in June, as compared with $16.09 in May. Decreases were reported from Montreal, Belleville, Peterborough, Oshawa, Woodstock and Owen Sound. Rent was higher at Halifax, St. Hyacinthe and Owen Sound.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Wheat prices showed a substantial decline during the month, No. 1 Manitoba northern cash wheat, Fort William and Port Arthur basis, being down from $1.08 per bushel in May to $1.03 in June. More favourable crop conditions in the Canadian west and an increase in the visible supply of Canadian wheat were said to be the causes of the decline, together with poor export demand. Coarse grains also were lower, western barley being down from an average of 44·9 cents per bushel to 39·3 cents; American corn from 92·9 cents per bushel to 91·2 cents; flax from $2.19 per bushel to $2.12; oats from 49·9 cents per bushel to 47·6 cents; and rye from 62 cents per bushel to 53·8 cents. Flour prices also showed a sharp decline at an average price of $7.23 per barrel, as compared with $7.72 in May. Bran at Montreal fell from $32.40 per ton in May to $27.21 in June and shorts from $33.81 per ton in May to $29.21 in June. Raw sugar at New York advanced from $1·438 per hundred pounds to $1·563, while granulated at Montreal remained unchanged at $4.66 per hundred pounds. Ceylon rubber at New York fell from 14·6 cents per pound to 12·3 cents. Steers at Toronto declined from $10.70 per hundred pounds to $9.47; good veal calves from $10.84 per hundred pounds to $9.72, and lambs from $14.63 per hundred pounds to $13.95. Hogs, however, were higher, advancing from $12.13 per hundred pounds to $12.42. Price declines of from 2 to 5 cents per gallon for milk occurred at Montreal, Quebec, Toronto, Hamilton, Regina and Edmonton. Creamery butter at Montreal was down from 33·07 cents per pound in May to 30·1 cents in June, and at Toronto from 33·73 cents per pound in May to 31·7 cents in June. Fresh eggs at Montreal showed little change at 35·9 cents per dozen. Raw cotton at New York declined from 16·43 cents per pound to 14·4 cents. Raw wool at 17-18 cents per pound was ½ to 1 cent per pound higher than in May. Raw silk continued to decline, the price being down from $4.55 per pound in May to $4 in June. The price of common white pine declined $1 per thousand board feet to $42, while fir timber was down from $18 per thousand board feet to $17. In steel, automobile body plates declined in price from $3.80 per hundred pounds to $3.60, and black steel sheets from $3.50 per hundred pounds to $3.39. In non-ferrous metals tin declined from 34¾ cents per pound to 32¼ cents, and copper from $14.84 per hundred pounds to $14.28.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base of 1924=100, was 73.4 for May, a decline of 1.3 per cent for the month and continuing the steady decline since October, 1929, which in May amounted to 10.4 per cent. As compared with April, food was 1.4 per cent lower, declines in cereals, meat and fish being partly counteracted by an advance in other foods. Non-foods were 1.5 per cent lower than in April, with decreases in all groups with the exceptions of wool and miscellaneous commodities.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base 1867-1877 =100, was 98.8 at the end of May, which is 2.7 per cent lower than at the end of April and 12.6 per cent lower than at the end of May, 1929, and brings the index number of prices down to a level which is only 21.7 per cent higher than in June, 1914. The following paragraph is quoted from the *Statist*, June 21, 1930:—

"It is interesting to note that for the first time since January, 1915, the index number last month was below the figure of 100, i.e., it represented a level of wholesale prices actually lower than that which obtained on an average during the basic period of 1867 to 1877. The fall in the index number since the return to the gold standard in April, 1925, amounts to 30 per cent, while over the past two years alone the fall amounts to 22 per cent."

As compared with the previous month, the index numbers of all groups, with the exception of a slight advance in textiles, were lower at the end of May. Animal foods showed the greatest fall, amounting to 7.4 per cent.

COST OF LIVING.—The index number of the Ministry of Labour, on the base of July 1914 =100, was 154 at May 31, a fall of one point from May 1, which was entirely due to lower food prices, other groups being unchanged. The greatest decreases in the retail prices of foods were in bacon and butter.

Belgium

WHOLESALE PRICES.—The index number of the Ministry of Industry, Labour and Social Welfare, on the base of April 1914=100, was 774 for March, as compared with 791 for February. Of the 17 groups of commodities included, 15 were lower than the previous month, chemical products were unchanged and construction materials were slightly higher.

COST OF LIVING.—The index number of the cost of living of a middle class family of moderate income, on the base of 1921=100, was 236.27 for April, as compared with 241.25 for March. All groups were lower than in March with the exception of a slight advance in rent.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 125.7 for May, a fall of 0.8 per cent from the April level. Out of the 18 groups included in the compilation, 14 were lower than in April, the greatest falls being in non-ferrous metals and in rubber.

Australia

WHOLESALE PRICES.—The index number of the Melbourne Statistical Office, on the base 1911 = 1000, was 1647 for March as compared with 1674 for February and 1719 for January. As compared with February, price levels for jute, leather, wool, etc., agricultural produce, etc., groceries, and building materials were lower, while dairy produce and meat were higher; metals and coal and chemicals were unchanged.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1539 for April, as compared with 1542 for March. Foodstuffs of vegetable origin and animal products were lower than in March; textile manufactures, metals and their products and non-metallic minerals and their products were higher. Wood and wood products and the chemicals and manures were unchanged.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base of 1926 =100, was 89.1 for May, a fall of 1.7 per cent

(Continued from page 858)

from April and of 7 per cent from May, 1929. All groups were lower in May than in April with the exceptions that fuel and light were slightly higher and housefurnishing goods were unchanged.

The *Annalist* index number, on the base 1913=100, was 128.5 for June, a fall of 2.7 per cent from May. Every group was lower than in the previous month, substantial decreases being recorded in farm products, food products, textile products, building materials and miscellaneous commodities, with smaller decreases in fuels, metals and chemicals.

Bradstreet's index number, showing the cost of a list of 106 commodities, was $10.5611 at July 1, a decline of 1.9 per cent from June 1, and of 15.3 per cent from July 1, 1929, and is the lowest index number recorded since November, 1915. Small increases were noted in coal and oils; hides and leather were unchanged, while all the other groups were lower than at June 1.

COST OF LIVING.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 156.2 for May, a fall of 0.8 per cent from April. All groups were included in the general decline, the greatest fall being in coal, amounting to 3.5 per cent; clothing fell 2.4 per cent and food prices 0.7 per cent.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Employer not liable for damages caused by unauthorized driver of car

AN employee of a certain company allowed another employee of the same company to drive a car that had been entrusted to him by the company. While driving the car, the latter employee negligently injured a car driven by a third person. Action was brought by the third person against the company, and also against the driver of the company's car. The County Court allowed damages in both cases, but on appeal, the Ontario Supreme Court reversed the judgment of the lower court as against the company, holding that, in the absence of proof that the man who was driving the car at the time of the accident was then acting as the company's agent, the company was not liable in damages either at common law or by Section 41 of the Highway Traffic Act (Revised Statutes of Ontario, 1927, chapter 251, as amended). This section provides as follows:—

(1) The owner of a motor vehicle shall be responsible for any violation of this Act or of any regulation prescribed by the Lieutenant-Governor in Council, unless at the time of such violation the motor vehicle was in the possession of some person other than the owner or his chauffeur, without the owner's consent, and the driver of a motor vehicle not being the owner shall also be responsible for any such violence.

Tudhope versus Henderson, Henderson versus Tudhope, Ontario (1930) 3 Dominion Law Reports, page 245.

Federal and Provincial Jurisdiction in Sunday Legislation

The respective jurisdiction of the Dominion Parliament and the Provincial legislatures in regard to legislation on the subject of Sunday observance was again defined by the Saskatchewan Court of Appeal in a recent decision. The same question arose in a case concerning the validity of a Manitoba act of 1923 (LABOUR GAZETTE, May, 1927, page 587). The present action concerned the question of the validity of a by-law to compel the observance and prevent the profanation of the Lord's Day by ordering that dance halls should remain closed during Sunday. The Court declared that the by-law dealt with criminal law, a subject assigned exclusively to the Dominion Parliament. Mr. Justice Martin, in the course of his judgment said:—

"Legislation therefore of a prohibitive character, passed for the purpose of compelling observance of the Lord's Day, falls within s. 91 (27) of the B.N.A. Act, which confers upon the Dominion Parliament, exclusively, jurisdiction to legislate in respect of the criminal law. Following the reference to the Supreme Court, the Lord's Day Act was enacted, and appears as R.S.C. 1906, c. 153, now R.S.C. 1927, c. 123. The Act, by s. 4, prohibits the doing of certain things on Sunday, 'except as provided herein, or in any provincial Act,' and, under the provisions of s. 15, Acts in force in any Province of Canada at the time relating to the observance of the Lord's Day, are not in any way affected. The Lord's Day Act was an attempt to enact prohibitive legislation with regard to the

observance of Sunday for the whole Dominion; recognizing however the different circumstances which prevail in the several Provinces, Parliament delegated to the Legislatures the power to declare that any act prohibited by the Dominion Act might be exempted from the operation of the Act and allowed to be done by appropriate Provincial legislation, either existing at the time or subsequently enacted. This being so, in considering Provincial legislation with respect to Sunday, one must inquire whether it is legislation permitting something to be done on Sunday which is prohibited by the Dominion Act; if it is, the legislation is valid, because this power is delegated to the Province, by the Federal Act; if, however, Provincial legislation is prohibitive and not permissive, it is, so far as it is prohibitive, *ultra vires*. The by-law in question here is prohibitive in its character, and could not be enacted by the Legislature. It follows that it could not be enacted by the municipality under the power conferred upon it to 'license, regulate and control' places of amusement."

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 30] AUGUST, 1930 [NUMBER 8

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

THE number of workers on industrial payrolls in Canada at the beginning of July showed a further pronounced increase, according to the Dominion Bureau of Statistics, which tabulated returns from 7,283 firms (each employing a minimum of 15 persons) in all industries except agriculture, fishing, hunting and highly specialized business. The staffs of these firms aggregated 1,043,232 workers, or 21,296 more than the number they employed on June 1. The index (based upon the average for the calendar year 1926 as 100), rose from 116·5 in the preceding months, to 118·9 in the month under review, as compared with 124·7, 117·7, 109·7, 105·0, 98·0, 97·1, 100·7, 92·2, and 88·6, at the beginning of July in 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

At the beginning of July, 1930, the percentage of unemployment reported to the Department of Labour by local trade unions stood at 10·6, contrasted with unemployment percentages of 10·3 at the beginning of June and with 2·9 at the beginning of July, 1929. The July percentage was based on the returns tabulated by the Department of Labour from an aggregate of 1,688 labour organizations embracing a membership of 201,672 persons.

Reports received by the Department of Labour from the offices of the Employment Service of Canada indicated a decline in the volume of business transacted in June, as compared with May, and also in comparison with the transactions taking place during June last year.

The average cost of a weekly family budget of twenty-nine staple foods was $10.91 at the beginning of July, as compared with $11.10 for June; $10.98 for July, 1929; $10.80 for July, 1928; $10.92 for July, 1927; $11.07 for July, 1926; $10.49 for July, 1925; $9.91 for July, 1924; $10.17 for July, 1923; $10.27 for July, 1922; $10.96 for July, 1921; $16.92 for June, 1920 (the peak); $13 for July, 1918; and $7.42 for July, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 85·8 for July, as compared with 88 for June; 96 for July, 1929; 96·2 for July, 1928; 98·5 for July, 1927; and 100·1 for July, 1926.

The loss in working time caused by industrial disputes in Canada during July was considerably less than in June, and was practically the same as the similar loss in July, 1929. Six disputes existed at some time during the month, involving 240 workers, and resulting in the loss of 2,600 working days. Corresponding figures for June, 1930, were as follows: six disputes, 1,116 workers, and 3,351 working days; and for July, 1929, nine disputes, 370 workers, and 2,279 working days.

Industrial Disputes Investigation Act

The Department of Labour received in July the reports of three Boards of Conciliation and Investigation appointed to deal with disputes respectively between the Luscar Collieries, Limited, and their employees; the Canadian National Railways and the officers and crew of the steamship "Prince Edward Island"; and the Shipping Federation of British Columbia and the waterfront workers at Vancouver. Two new applications were received during the month. An account of the recent proceedings under the Act, including the text of the reports of the Boards, is given in this issue commencing on page 880.

Ontario Trade Disputes Act

The section of this issue entitled "Recent Industrial Agreements" contains an outline of an agreement in the bakery industry at Toronto, in which provision is made for the settlement of any future disputes in accordance with the provisions of the Trades Disputes Act (Revised Statutes of Ontario, 1927, chapter 178). This Act, which was first passed in 1894, was described in a supplement to the LABOUR GAZETTE, March, 1925, entitled "Government Intervention in Labour Disputes in Canada." It makes provision for councils of conciliation of four members nominated by the parties to the dispute after application by one or both parties to the

registrar for the appointment of a council. Two councils of arbitration were to be appointed on the nomination of employers and employees for a term of two years, one council to have jurisdiction in railway labour disputes, and the other to deal with disputes in other industries. Reference to the council of arbitration was to be made by joint agreement of the two parties or by one party after failure of a conciliation council or refusal of the second party to submit the case to a council of conciliation. An arbitration award was to be binding only by joint consent of the disputants.

In accordance with the Act, the councils of arbitration were appointed, but no dispute was at any time referred to the council for railway labour disputes, and in only one case was application made to the other council for arbitration. A tailors' union in Toronto applied for action by the council in 1896, but the employers refusing their consent to arbitration, the result was an abortive investigation by the council. This failure of the law led to an amendment in 1897 which required the council of arbitration to communicate with the parties involved in a dispute and to endeavour to effect a settlement by mediation. Information regarding a dispute was to be sent by the mayor of the municipality concerned to the registrar. The amendment provided further that the Lieutenant-Governor in Council might appoint the council of arbitration directly if nominations were not forthcoming from the employers or employees. These clauses extended the act beyond the purely permissive character of the original enactment, but increased the facilities for conciliatory methods rather than the provision for arbitration.

A further development in the direction of mediation was made in 1902 by an amendment which empowered the registrar under the Trades Disputes Act (the Secretary of the Bureau of Labour after its formation in 1900) to act as mediator when requested to do so by one party to the difference, or by the mayor of the municipality concerned.

New Minister of Labour of Canada

In connection with the change of the Dominion Government which occurred on August 7, the Hon. Peter Heenan was succeeded on that date as Minister of Labour by Senator the Hon. G. D. Robertson, who had previously served as Minister of Labour from 1918 to 1921.

Special session of Parliament to consider unemployment

The Parliament of Canada has been summoned to meet in a special session opening in September for the consideration of measures for the relief of unemployment in Canada during the coming winter. In view of this session the Department of Labour has been conducting an inquiry during the past month as to the number of unemployed workers throughout the country, having sent requests to the provincial governments and the larger municipalities for statements as to the extent of the problem in their several districts. On August 21, the Employment Service Council of Canada met at Ottawa for the purpose of investigating the situation and making recommendations to the Minister of Labour.

Unemployment inquiry by Canadian Manufacturers' Association

In the course of discussion on the "unemployment insurance" section of the report of the Industrial Relations Committee at the recent annual convention of the Canadian Manufacturers' Association (LABOUR GAZETTE, June, 1930, page 674), the following resolution was proposed, and was adopted by the convention:—

"Resolved that in order to provide as much employment as possible in Canada, especially before next winter, this Annual General meeting request the Industrial Relations Committee of the Canadian Manufacturers' Association, with power to add, to make a special investigation into conditions along the following lines:—

"1. To ascertain and to define the causes of the lack of employment, particularly at certain periods.

"2. To consult with members of the Association and others in regard to these causes.

"3. To secure part time employment at least for those who are now out of work.

"4. To suggest methods of providing additional opportunities which, with those existing, will furnish all the people of Canada who are willing to work with employment at fair wages and under satisfactory conditions; and

"Further be it resolved that the Executive Committee be asked to supply the necessary funds."

Unemployment Insurance bill in New Zealand

An Act establishing a system of contributory unemployment insurance was passed by the New Zealand House of Assembly in July. Its provisions mainly follow the recommendations

of the Unemployment Committee whose report is outlined elsewhere in this issue of the Labour Gazette. A fund is to be created and administered by a board of eight members, one half being formed by means of an annual levy of thirty shillings on all male workers of 21 years of age and over, and an equal amount being paid by the Dominion Government out of consolidated revenue. According to press reports, the scheme provides for the payment of a sustenance allowance of 21 shillings ($5.25) weekly to contributors during unemployment, for a period up to six months, and also for payment of 17 shillings (about $4.36) in respect of the wife of an insured worker, and four shillings ($1) weekly for each child.

British Unemployment Insurance system

The *Economist* (London), July 26, 1930, discussed the Unemployment Insurance (No. 4) Bill, then before the British House of Commons, this bill providing for an increase in the Government's borrowing powers by ten million pounds. It was suggested that the time has come for a full review of the whole position of unemployment insurance in Great Britain, with a view to the creation of a new system in which insurance proper should be kept apart from eleemosynary relief.

"In such a review, as we have previously urged, the basis of benefits should be reconsidered. Miss Eleanor Rathbone, in the debate on the bill, laid stress upon this point, and said:—

"'The problem is immeasurably aggravated, I suggest, by our adherence to the British method of flat rates of contributions and flat rates of benefit. I call it the British method because, as far as I know, it is unique. I do not know of any Continental country where unemployment insurance is carried on by this system of flat-rate contributions and benefits. They all either divide the unemployed into groups according to their industrial status, with a special rate of benefit and of contribution, or the rates of contribution and of benefit are expressed as a percentage of their rate of wages.'

"The point is a very material one, and must be fully considered before the next Unemployment Insurance Act, which cannot be far distant, is drawn up."

Suggested measures to relieve unemployment in U.S.A.

The New York State Convention of the Socialist Party of the United States, held at Schenectady in July, adopted a resolution making the following recommendations to relieve the existing situation in regard to unemployment:—

1. The immediate launching of public works on an extensive scale by the State, City and County Governments and the prompt introduction of long-range planning of all future public works.

2. The extension of State and city public unemployment offices, in connection with a Federal system, under strict civil service and adequately financed.

3. The shortening of the work day to a maximum of six hours a day and a five-day week; the ratification of the Federal child labour amendment; absolute prohibition of child labour up to 16; compensation upon discharge by public and private employers, dependent upon length of service; and an old-age pension at 60

4. State insurance against unemployment.

Permanent unemployment committee recommended

The appointment of a permanent Committee for the prevention and relief of unemployment in Lansing, Michigan, has been recommended by Professor William Haber of the Michigan State College. "The most unfortunate aspect of the entire question of unemployment," he points out, "lies in the fact that, although the situation is a recurring one, little advance preparation for its coming is ever made. Relief and stabilization programs are emergency arrangements begun too late to be of any great value to the workers affected, and abandoned immediately after the situation is improved. The next depression finds the community no beter prepared and the same feverish interest and activity takes place with the same result, namely, the abandonment of the plan when the situation shows any improvement." What is needed, Professor Haber suggests, is a permanent institution in the community, studying and planning the two phases of its task, prevention and relief.

Records of industrial accidents

In his annual report for 1929, Mr. M. L. Fraser, the field officer of the Nova Scotia Accident Prevention Association, called attention to the importance of securing more accurate statistics of industrial accidents. In his opinion a distinction should be carefully drawn between the cause of an injury and the cause of an accident, and he urged employers to make a more thorough investigation of their accidents so that the causes might be dealt with. Unfortunately, he said, nearly all the accident reports which employers submit to the Workmen's Compensation Board give only the immediate cause of the injury sustained by the workman concerned, and "on this account it is not possible

to compile a statement of accident causes which would be of much value."

Mr. Fraser attributes the almost universal increase in accidents in part to the "wholesale spirit of recklessness" everywhere evident, and urged employers to give attention to more careful methods. As to the extent of the benefits that have been secured by past efforts in this direction he pointed out that these results may be difficult to show in concrete form, and he suggested that a more encouraging inquiry might be to ascertain what would have been the increase in industrial accidents, and what would compensation costs have been, if no safety organization had existed.

Progress of accident prevention in Ontario

Some progress in accident prevention has been shown so far this year in the records of industrial accidents in Ontario, although the number of fatalities in July was augmented by the disaster which occurred on the St. Lawrence River near Brockville, by which thirty workmen lost their lives in an explosion caused by lightning. Particulars of this disaster are given in the report on Industrial Accidents during the second quarter of 1930, in the present issue of this GAZETTE. There were 6,141 accidents reported to the Ontario Workmen's Compensation Board during the month of July, a decrease of 166 from the number during June, and 2,397 less than July a year ago, in which the largest number of accidents were reported that have been reported during any one month since the commencement of the Act. This brings the total number of accidents reported to date this year to 42,439, as compared with 50,053 for the same period last year, and 42,590 for the corresponding period of 1928. Eighty-eight fatal accidents were reported to the Board during July, this being the largest number of fatalities during any month since the Act has been in operation, the increase no doubt being partially due to the recent explosion near Brockville. The total benefits awarded during July amounted to $660,844.16, of which $563,168.49 was for compensation and $97,675.67 for medical aid, as compared with $716,649.28 total benefits during July a year ago.

Ontario compensation system studied in New Zealand

A commission appointed last April by the Government of New Zealand to inquire into the existing legislation in regard to workers' accident compensation recently presented their report. This report includes an historical summary showing that the New Zealand statutes on this subject have mainly followed the lines of English legislation, and proceeds to recommend various changes that would bring the law into fuller conformity with conditions in New Zealand. Among other aspects of the subject the commission considered the question of a monopoly of Workers' Compensation insurance, with particular reference to the Ontario system of a "state accident fund." Their finding on this subject is as follows:—

"The Ontario system is to be distinguished not by the employments covered or excluded, or by the scale of benefits provided—both are details variable by law from time to time under any system—but by the principle of combining under a Board of Commissioners (*a*) Compulsory insurance by employers on a mutual or collective liability basis without State guarantee and with all common-law rights abrogated; (*b*) Final adjudication of claims 'upon the real merits and justice of the case' without being bound by the strict legal precedent, and without the intervention of solicitors; (*c*) Accident-prevention and merit rating; (*d*) Administration of compensation-moneys by way of pensions or lump sums to injured workmen or their dependants.

"It is obvious that such a system, efficiently managed and kept free of political or other outside influences, eliminates all profit, reduces working-expenses, and expedites the final settlement of claims without the legal expense which an appeal to the Court involves. The evidence before us leads us to believe that the system in the country of its origin is giving general satisfaction apart from its limited scope (which there is an agitation to enlarge), and is providing out of the assessments on employers, and interest on investments, a greater percentage for the injured worker who is covered than would be possible under any system of competitive insurance.

"The success of the system in Canada, however, does not by any means establish that a similar system would be equally successful in New Zealand. The psychology of the people has to be considered, and we are not certain that this Dominion would take kindly to an autocratic system, however well administered, which combined the present functions of an insurance office with the judicial authority of the Arbitration Court. In Ontario the collective liability system was established coincidentally with the workers' compensation law, and on its introduction there was practically no business lost to the insurance companies. In New Zealand, however, its establishment would displace a system of insurance which was operated not unsatis-

factorily to employers and workers for twenty-nine years, and would more or less adversely affect the livelihood of many thousands of persons. In Ontario the establishment of the system had the support both of labour organizations and of the largest association of employers in Canada. In New Zealand, evidence was given to the Commission that the majority of employers would oppose a monopoly, and that the workers would oppose the loss of the right of action at common law.

"On the important question of comparative cost, the evidence shows that the low working-expense ratio in Ontario (in 1927 it was 6·54 per cent, on the basis of comparison adopted in New Zealand) is due to a considerable extent to the fact that workers' compensation liability in that province (as in nearly all American States, irrespective of whether competitive or monopolistic insurance systems operate) is not imposed upon farmers, employers of domestic, or small employers.....

"In New Zealand, on the other hand, the liability extends not only over the whole industrial field, irrespective of the nature or size of the industry, but even beyond it, and the demand is for the removal of the few remaining exemptions. The administrative cost in New Zealand, therefore, of a collective-liability system on the Ontario model, applied to all employers under the Act, however distantly situated from the administrative centre and without regard to the smallness of the wage-sheet, must of necessity be much higher than in Ontario, and might be expected to approximate that of Queensland, where State monopoly (not a collective-liability system as in Ontario) operates over a field of coverage more comparable with that in New Zealand. The expense ratio in Queensland in 1929 was 15·6 per cent.

"It is clear that any saving which might be effected by the establishment of a collective-liability system in New Zealand would be counterbalanced by the loss of much of that service which the present system now supplies to the employer, and to a lesser extent to the worker. The change would be felt particularly in the country districts. In addition, it is reasonable to believe that the administration would be hampered by the antagonism of employers, solicitors, displaced agents, and others who so long have been interested in the maintenance of the present system."

Technical Service Council for Canada

A report on the first two years' work of the Technical Service Council was presented at the last annual convention of the Canadian Manufacturers' Association. This movement orginated with a group of engineers who desired to find a method of providing employment in Canada for highly trained technical men, graduates of the faculties of applied science in Canadian universities, or graduates of technical schools. The University of Toronto, the Canadian Manufacturers' Association and various other organizations gave their support, subscribing the necessary funds, and the Council was formed in 1928. Sir John Aird, of the Canadian Bank of Commerce became Honorary treasurer, and Sir Edward Kemp, the chairman of the Executive Committee, the other officials being prominent in education or industry. The objects of the Council are as follows: to retain in Canada the highly trained scientific and technical man; to co-ordinate industry and the universities; to bring suggestions from industry to the faculties of applied science; and to suggest to manufacturers how they might improve their products and methods of marketing by employing technical men. The report stated that during the past two years the Council received one thousand applications for men with specialized training, and as a result 550 highly trained university graduates and others were placed in the industries of Canada. In the four years preceding the formation of the Council it was claimed that 20 per cent of the graduates of Ontario universities left Canada in order to obtain a livelihood, whereas in 1929 barely 3 per cent of the graduates in applied science had to go outside Canada for employment. Moreover, 55 Canadians were brought back from the United States in the same period and placed in Canadian industries.

Joint Civil Service Council in Saskatchewan

The Legislature of Saskatchewan at its recent session made provision, in Part V of the Public Service Act, for the establishment of a Civil Service Joint Council. This Council is for the purpose of hearing and determining appeals from employees in the matter of classification or grading, and generally "for the purpose of hearing and adjudicating upon complaints of employees with respect to matters arising in the course of the duties of such employees." The composition of the Council is determined in the Act as follows—

"The joint council shall consist of the following members: Three members shall be appointed by the Lieutenant Governor in Council, of whom one shall be a member of the Executive Council, and four shall be elected by the employees of the public service in the manner hereinafter set forth, provided that not more than three members elected by the employees shall sit at a hearing of any appeal or complaint. The members elected to represent the employees shall by mutual agreement decide which one of them shall not sit at such hearing, and if they fail to agree, they shall make the decision by lot.

Of the members representing the employees, one shall be elected by and from the employees in the mental hospitals, gaols and other similar institutions; one shall be elected by and from the employees in or under the Liquor Board; one shall be elected by and from the employees of the Department of Telephones and Telegraphs, the Saskatchewan Power Commission and any other public utility branches of the public service, and one member shall be elected by and from the remainder of the public service.

Only employees on the permanent staff shall be entitled to vote in the election of members of the joint council. Each permanent employee shall be entitled to one vote. The voting shall take place in such manner as may be prescribed by the regulations of the commission, approved by the Lieutenant Governor in Council.

Persons appointed to the joint council shall hold office during pleasure. Persons elected thereto shall hold office for three years, and shall be eligible for re-election.

The *Saskatchewan Gazette,* July 12, 1930, contained the regulations governing the procedure to be observed in connection with the voting in the election of representatives to act on the Joint Council. These regulations were adopted by an Order in Council dated June 28, 1930.

South African "Labour Gazette"

The official organ of the Department of Labour of the Union of South Africa is henceforth to be published once in each quarter under its original title *The Labour Gazette.* It was at first a monthly publication, the first issue appearing soon after the Department was established in 1924 (LABOUR GAZETTE, *June,* 1925, page 549). The name of the magazine was changed in 1926 to *Social and Industrial Review,* but in future the earlier title will be resumed, the issues being quarterly instead of monthly for reasons of economy. In discussing the subject matter to be dealt with in the new magazine, the *Social and Industrial Review* in its final issue describes the recent growth of the functions of the Department as follows:—

"The initiation of the Ministry of Labour in July, 1924, marked an important stage in the administrative development of the Union. It indicated a sense of the growing importance of State intervention in industrial and social affairs, and the need for concentrated attention upon such by a Minister who would make this his special business. Previously, industrial matters, questions of unemployment, the improvement of social conditions, and kindred subjects had been regarded, administratively, as a sort of side-line of a Department engaged primarily on other important and well-established functions.

"With the passing in 1924 of the Industrial Conciliation Act, it was inevitable that a change should take place, for that Act was designed as, and has in fact proved, the dominant feature in controlling and regulating employment conditions in South African industry. The passing of the Wage Act in 1925 added another series of important and far-reaching functions, and completed, with the Workmen's Compensation Act of 1914, the Factories Act of 1918 and the Apprenticeship Act of 1922, the group of laws which constitute the major part of the Industrial Code of the Union. It is safe to say that there is no industry nor line of employment in any industrial area which has not been influenced directly or indirectly by the legislation referred to.

"On another side the Department has also a series of important functions, under the Juvenile Affairs Act, to establish contact with boys and girls in the last stages of their school life and guide and assist them to fit themselves into their life's occupation. . . . On yet another side the Department has been called upon to deal with all stages of unemployment, that is, to face a problem which has exacted the keenest attention of investigators, statesmen, and the whole of society in almost every civilized country. Unemployment in South Africa differs greatly in form from that prevailing in other countries; but, in proportion to the small white population, it is sufficiently serious, and unfortunately, shows signs of increasing in extent."

The government of Saskatchewan has announced that nurses in training, hospital orderlies, graduate nurses, and X-Ray operators are to be exempt for one year from the provisions on the One Day Rest in Seven Act, passed at the last session of the provincial legislature (LABOUR GAZETTE, June, 1930, page 656). It was further stated that firemen will be included after the end of the current year, when plans would be completed for the necessary additions to existing staffs.

On August 5 the New York Typographical Union, by a vote of 4,486 to 3,137, rejected a proposal to make compulsory a five-day working week for the purpose of providing work for its unemployed members. The number of chapels participating in the vote was 358. The question submitted to the members was in the following form: "Shall the union adopt a compulsory five-day law, applicable to the book and job and newspaper branches?"

Mr. William Green, president of the American Federation of Labor, states that the producing power of the average worker increased 11 per cent in the years from 1899 to 1919, but in the short space of ten years from 1919 to 1929, half as long a time, it has increased 53 per cent. President Green estimates that in the United States 6,000,000 new jobs are needed.

By an Order in Council of the government of Saskatchewan, dated June 14, 1930, the provisions of the Civil Service Superannuation Act (Statutes of Saskatchewan, 1926, chapter 2), were declared to apply to the permanent employees of the Public Service Commission. The provisions of this Act were outlined in the Labour Gazette, April, 1927, page 384.

British Co-operative Congress

The sixty-second Annual Congress of delegates from Co-operative Societies in the United Kingdom was held at York in June, and was attended by 1,572 delegates representing 574 societies. There were also representatives of co-operative organizations from South Africa, and from France, Germany, Russia, Sweden, and Switzerland. The Congress was convened by the Co-operative Union of Great Britain and Ireland, a federation of 1,239 societies, with an aggregate membership of over six millions. The Congress President was Mr. T. Liddle, O.B.E., J.P., a director of the Co-operative Wholesale Society, Ltd., and president of the Hartlepools Co-operative Society, Ltd.

The President, in his inaugural address, referred to the new policy of co-operative rationalization advocated by the President of the Congress of 1928. Societies he stated, are recognizing the wisdom of amalgamating with their neighbours as a first step towards the unification and consolidation of the movement nationally. He asked for greater loyalty in purchasing by the members of societies. The average weekly value of purchases during 1929, he said, was only 13s. 6d. per member; and the value of their own productions supplied by the two Wholesale Societies to the retail societies represented only 17.16 per cent of the movement's retail turnover.

The report of the Central Board of the Co-operative Union was presented to the Congress and discussed by the delegates.

In moving the adoption of the Labour Committee's section of the report, the chairman of the committee referred to the fact that, with the one exception of the dispute with the Co-operative Insurance Society's agents, the year had been free from disputes between the societies and their employees. He hoped that societies would do their best to carry out the committee's suggestions for mitigating the evil of "blind alley" occupations, and would co-operate with the Juvenile Employment Committees of the Ministry of Labour to that end.

The chairman of the Central Education Committee of the Union, in introducing the Committee's Report, referred to an arrangement which had been made with the Co-operative Wholesale Society whereby the technical education of apprentices and employees of higher grades would be directed by a joint committee of the two bodies. The report stated that the number of students enrolled in the various classes during 1929-30 was 49,665, an increase of 4,362 over the previous year.

In accordance with a resolution passed at last year's Congress, a committee had been set up to consider the milk problem of the movement; and the report of this committee was considered and approved. The report recommended the setting up of an association, to be called the National Co-operative Milk Trades Association, to centralize the organization of the co-operative milk trade.

Congress also approved the report of the Trade Advisory Committee, which had been appointed to consider a proposal to set up trades advisory bodies, "to encourage, strengthen and develop the business organization of the movement." The report recommended the setting up of trade associations in the various sections—meat, coal, bakery, etc.—on lines similar to those suggested for milk, to develop business in their several sections.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

THE Employment situation at the end of July was reported by the Superintendents of the Employment Service of Canada to be as follows:—

Haying was well under way in the province of Nova Scotia and additional farm workers were being placed for this purpose. Other crops, for the most part, were progressing satisfactorily and good yields were anticipated. Fishing was reported as fair. Activity in logging continued, with many crews cutting and peeling pulpwood. Operations in the iron and steel industry were somewhat varied, some departments working at capacity, while others were on part time and a few were idle. Sawmills and wood working factories were busily engaged, as were also manufacturers of bread, confectionery, mineral water and ice cream. The coal mining industry showed quite satisfactory production, some of the mines working full time. Salt mines were particularly busy. Due to fine weather, great progress was made in all building projects. Street paving and highway construction also offered employment to many. Transportation, both passenger and freight, was heavy, while trade was slightly improved. There was a good demand for women domestic workers, which in some quarters exceeded the supply.

As in Nova Scotia, haying was well under way in the province of New Brunswick, with applicants being referred and placed. Crop prospects, generally, were reported as favourable. Catches in the fishing industry in the Province were stated to be fair, though in the vicinity of Saint John salmon fishing continued good, as did haddock also. There was a continued demand for loggers, but owing to longshore work being brisk, it was difficult to obtain men to fill the vacancies offered in this industry. In the manufacturing division, sawmills and sash and door factories were busy, while ice cream and soft drink plants worked overtime. Pulp mills were fairly well employed, but foundries reported slack time. Highway construction was employing a substantial number of workers, while a more progressive program was planned for the near future. Building construction was largely confined to indoor work, with a large number of skilled and unskilled labour employed. Passenger traffic was heavy but freight was only fair, though longshoremen were busy. Trade was seasonally good. The demand for women domestic workers continued, and placements were made.

The agricultural situation in the province of Quebec was reported as normal, some offices noted an increased demand for workers in this industry, resulting in a large number of placements. There was a slight revival of activity in logging, bushmen and general hands being in demand. In manufacturing, no outstanding changes had taken place. Activity was reported in certain branches, while in others, the demand for employees was not very great. In Montreal, the boot and shoe industry, textiles and metallurgy showed no gain. Tobacco and cigar trades, also printing, were busy. The conditions amongst clothing workers were satisfactory. Quebec reported factories were operating at 60 per cent of their capacity, while in Sherbrooke, silk and cotton mills, and iron and steel were active. In Three Rivers, there was no favourable change in the situation from the preceding month but rather a slight curtailment in employment in the paper mills. Building and construction showed increased activity, conditions being satisfactory in the larger cities of the province, though there was still a number of unemployed. Transportation was fair, as was also trade. The number of orders received for domestic workers was numerous and placements in this group easily effected.

Hay cutting was practically general in the province of Ontario and created quite a demand for farm help which was filled in some instances by men soliciting work on their own behalf. Although occasional orders for bushmen were received, the logging industry was fairly quiet, not much activity being anticipated in that division until fall operations are resumed in September. Little employment was afforded by the mines in this province, though men were transferred to Manitoba for work there. Continued rains in the Cobalt area held up operations owing to the flooding of some of the mines in that district. Reports from manufacturing industries did not show much encouragement, as further reductions in staff were made and most plants working below normal capacity, there being no indication as yet of any industrial revival. The building group showed continued activity and a substantial volume of employment was afforded in this industry, prospects being good for further contracts opening up in the Niagara Falls and Brantford areas. The employment situation for women remained practically unchanged, many inexperienced foreigners applying for positions for whom none could be

found. Hotels and inns also had their quota of workers hired and few vacancies existed there. Out of town orders, however, continued to relieve the situation somewhat.

An increase in the demand for farm help was noted in the province of Manitoba and a number of placements made, though hail and rust had, in some districts, done con-

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

siderable damage to crops. There was no demand for loggers but new activities were reported in mining districts and a few men were placed. Manufacturing showed no change. Building construction was very quiet, except in the city of Winnipeg, where tenders had been called for several large contracts. Highway work was still being carried on in some parts of the province but not to any great extent. Trade showed slight improvement. The general situation throughout the province was far from satisfactory and there continued to be many unemployed who were anxious to work, but could find no employment. In the Womens' Domestic Section a number of orders had been received which were easily filled.

Farm orders registered at Saskatchewan Employment Offices showed an increase but no shortage of available applicants was in evidence. Storms in some portions of the province had damaged the crops but in other parts, harvesting of rye was well under way. Building construction, throughout Saskatchewan, was very quiet though Regina reported an increase in that group, as well as in highway and railroad construction. Employment conditions were reported as far from satisfactory in many centres, but some improvement was shown. More than sufficient applicants, however, were available for all work offered. In the womens' division, there was a slight increase in the number of orders listed, with scarcity of workers reported at one office only.

As in the provinces of Manitoba and Saskatchewan, farm help in the province of Alberta was in demand. All country towns, however, seemed plentifully supplied with available men. Although harvesting was not expected to begin for several days, prospects for a heavy crop in some localities were far from promising. Building construction showed some activity, still there was a surplus of tradesmen unemployed. At Calgary, contract work on the Glenmore Dam was to be started soon, with the proviso that none but local men should be employed, thus relieving the unemployment situation in that city, while other offices reported contracts finished, and men laid off. There was very little demand for loggers in the Edmonton district. At the date of this report, the coal mining industry was dull, but a reopening of two mines in the course of a few weeks is anticipated. The Womens' Domestic Division was quiet, with sufficient help to meet the demand.

The demand for farm workers in British Columbia had slightly increased, as haying had begun, but orders were easily filled. Fruit picking was not yet fully under way, but when fruit canneries opened, it was expected that all necessary help would be available locally. Logging was quiet in some portions of the province, while sawmills were running full time in others. Mining was also slack, with some mines working part time only. Construction showed new activity, the major part of the work carried on, being the finishing up of contracts already under way. There was little call for railway labourers. Highway work in the vicinity of Prince George, however, showed progress. Longshore workers were fairly busy. Retail trade was quiet, while wholesale was fair. Forest fires in some sections provided employment for a number of men but this work being of a temporary nature only, it did little to relieve the unemployment situation. With many women registering for domestic service, the supply far exceeded the demand. Employment conditions throughout the province showed no improvement, with many men still unemployed.

EMPLOYERS' REPORTS.

There were further pronounced increases in employment at the beginning of July, according to statements tabulated by the Dominion Bureau of Statistics from 7,283 firms employing 1,043,232 workers, or 21,296 more than on June 1. This advance brought the index number, (based upon the average in the calendar year 1926 as 100) to 118.9, as compared with 116.5 in the preceding month, and with 124.7, 117.7, 109.7, 105.0, 98.0, 97.1, 100.7, 92.2 and 88.6 at the beginning of July in 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Industrial employment was thus at a higher level on July 1, 1930, than at the beginning of July in any other year on record with the exception of 1929.

The trend was favourable in all provinces except Ontario, the most noteworthy expansion taking place in the Maritime provinces. In the Maritime provinces, construction recorded the greatest improvement, there being unusually large increases in highway construction, but there were also gains in logging, services, communications and trade; on the other hand, manufacturing and transportation were slacker. In Quebec, construction, transportation, trade and services reported the largest addition to staffs, but logging registered seasonal declines, and manufacturing also released employees. In Ontario, considerable gains were shown in construction, transportation, services and trade, but logging and manufacturing were seasonally quiet, and there were also losses in mining and communica-

tions. In the Prairie provinces, the most noteworthy advances were in construction, but manufacturing, transportation, services, trade and communications also showed improvement. In British Columbia, manufacturing, particularly of lumber products, was slacker, as was logging, but trade, services, transportation and construction recorded gains, that in highway construction being most important.

In Montreal, Toronto, Ottawa, Hamilton, Windsor and the adjacent Border Cities and Vancouver, reductions in employment were registered, while improvement was indicated in Quebec city and Winnipeg. In Montreal, employment showed a slight decline, there being losses in manufacturing and transportation; on the other hand, construction and trade reported heightened activity. In Quebec city, construction, services and transportation registered practically all the gain. In Toronto, trade, services and road construction reported increased activity, while there were losses in manufacturing and building construction. In Ottawa, most of the decline took place in construction. In Hamilton, manufacturing showed practically all the reduction. In Windsor and the adjacent Border Cities, further curtailment was noted, mainly in automobile plants. In Winnipeg, communications, construction and trade registered advances, while other industries showed only slight changes. In Vancouver, there were small gains in construction, services and trade, but manufacturing was slacker.

In manufacturing, seasonal curtailment was shown in textile and iron and steel plants, and there were also losses in leather, lumber, pulp and paper and some other groups. On the other hand, canneries and other food, rubber and building material factories recorded heightened activity, but the general trend in this division was downward. Apart from the manufacturing industries, there were declines in logging and mining, those in the former being seasonal in character; transportation showed practically no change on the whole, while trade, services and construction recorded important expansion, that in highway construction being particularly pronounced.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of July, 1930.

Trade Union Reports. There was a further though slight decline in the volume of employment reported by trade union members at the end of June, according to the reports tabulated from a total of 1,688 labour organizations with a combined membership of 201,672 persons. Of these 21,292, or a percentage of 10.6, were idle on the last day of the month contrasted with 10.3 per cent in May. Employment, however, showed a considerable drop from June of last year when 2.9 per cent of the members reported were idle. In comparison with the May returns, Quebec, with an unemployment increase of about 3 per cent, registered the most outstanding change while in Saskatchewan, New Brunswick and Manitoba also the situation declined slightly. In Alberta and British Columbia moderate improvement was reported while the increases recorded in Nova Scotia and Ontario were less than 1 per cent. The percentages of unemployment registered in all provinces except Nova Scotia exceeded those shown at the close of June a year ago, Quebec unions indicating the greatest contractions in activity, though in Alberta also marked employment reductions occurred. The Nova Scotia situation remained unchanged in both months of the comparison.

Elsewhere in this issue will be found an article in greater detail on unemployment among trade union members at the close of June.

Employment Office Reports. Reports from the offices of the Employment Service of Canada for the month of June, 1930, showed 26,150 references of persons to positions and a total of 24,884 placements. Of these the placements in regular employment totalled 14,589, of which 10,438 were of men and 4,151 of women, while placements in casual work were 10,295. Vacancies offered by employers to the Service numbered 26,221, of which 16,607 were for men and 9,614 for women. Applications for employment were registered from 27,921 men and 12,974 women, a total of 40,895. A decrease was shown in the volume of business transacted when the above figures were compared both with those of the preceding month and also with those of June last year, the reports for May, 1930, showing 31,449 vacancies offered, 46,507 applications made and 29,318 placements effected, while in June, 1929, there were recorded 36,744 vacancies, 44,365 applications for work, and 34,010 placements in regular and casual employment. A report in detail of the work of the offices for the month of June, 1930, and for the quarterly period April to June may be found elsewhere in this issue.

Building Permits and Contracts Awarded According to the monthly report prepared by the Dominion Bureau of Statistics the value of permits issued in 61 cities during June, 1930, was $17,935,478, as compared with $19,621,302 in the preced-

ing month and with $27,816,592 in June a year ago.

The *MacLean Building Review* reports that construction in Quebec and the Maritime Provinces was being carried on during the first seven months of 1930 in greater volume than last year, while that in Western Canada and Ontario was less than a year ago. On the whole, it is stated, Canadian construction is 17·3 per cent less than for the same period in 1929. Building, omitting engineering contracts, was down 28·5 per cent. Hospitals, public buildings, educational buildings, and theatres each showed increased activity, and engineering contracts were up 11·7 per cent. The total for July this year was $37,374,400. Of this total $14,413,400 was for engineering purposes; $14,030,700 was for business buildings; $6,623,700 was for residential buildings and $2,306,600 for industrial purposes. The apportionment of the contracts awarded during July by provinces was as follows: Ontario, $16,549,900; Quebec, $7,637,800; Saskatchewan, $3,696,700; British Columbia, $3,323,400; Manitoba, $2,941,200; New Brunswick, $1,510,900; Alberta, $1,346,200; Nova Scotia, $217,300; Prince Edward Island, $151,000.

Production and Trade

INDUSTRIAL PRODUCTION

Figures showing the volume of production in certain industries during recent months, and also in the corresponding months last year, are shown in the table on page 875.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business operations in Canada, measured by weighted indexes of physical volume, showed moderate recession during June from the levels of the preceding month. The output of automobiles was in considerably lesser volume even after adjustment for seasonal tendencies. Production of newsprint was not so large as in May, and the exports of lumber to external markets were reduced. According to the latest available statistics, sugar and flour were produced in greater volume, and the production of steel was greater than in May, while the output of pig iron showed recession. While the gain over May in the imports of crude petroleum fell short of the normal seasonal increase, receipts were in good volume. Imports of crude petroleum during the first six months of the present year were 17 per cent greater than in the corresponding period of 1929. Imports of raw cotton declined from the moderate level of the preceding month. The net result was that the index of manufacturing production in June showed substantial reduction from May.

Newsprint production in Canada amounted to 213,634 tons during June and shipments were only slightly less. The June output is normally less than in May, but even after adjustment for seasonal tendencies the decrease this year was 7·8 per cent. Canadian mills operated at 73 per cent of capacity during June, and stocks on hand at the end of the month totalled 45,229 tons.

Canadian coal mines produced 1,128,124 tons during June, a slight increase over the output in the preceding month, but a 10 per cent decrease from the 1925-1929 average for June of 1,257,384 tons. Bituminous coal mined during the current month amounted to 989,840 tons, sub-bituminous coal, 29,737 tons, and lignite coal, 108,547 tons. Production from mines in Nova Scotia was 545,791 tons, in New Brunswick, 14,918 tons, in Saskatchewan, 20,452 tons, in Alberta, 345,856 tons, and in British Columbia, 201,107 tons.

Coal imported into Canada during June amounted to 1,887,497 tons as compared with 1,754,500 tons imported in the corresponding month of 1929. Imports of anthracite totalled 406,065 tons; of bituminous, 1,481,138 tons and of lignite, 294 tons. Shipments of coal were received from Great Britain, the United States and Russia during June.

Canadian coal exported totalled 68,362 tons, a considerable increase over the May exports, but a 2 per cent decrease from the five-year average for June of 69,797 tons.

Coal made available for consumption in Canada in June was approximately at the same level as the average for the month in the five preceding years and amounted to 2,947,259 tons. This total included 1,059,762 tons of Canadian coal and 1,887,497 tons of imported coal. The tonnage of coal made available for consumption during the month is calculated by adding the Canadian production to the imports and subtracting the exports from this total.

Production of pig iron in Canada during June amounted to 66,081 long tons, a decline of 18 per cent from the 80,505 tons in the previous month and 27 per cent less than the 89,873 tons produced in June of a year ago. The decline from the May figures was due to the lowered output of the basic and malleable grades. Basic iron dropped to 45,349 tons from 56,482 tons and no malleable iron was reported for June as against 12,636 tons of this grade in May, while foundry iron rose sharply to 20,732 tons from 11,387 tons.

Production of ferro-alloys in Canada in June at 11,059 long tons was the highest monthly output on record, being 42 per cent

over the 7,766 tons reported for the previous month and 60 per cent greater than the total of 6,933 tons made in June of last year.

Production of steel ingots and direct steel castings in Canada during June amounted to 95,321 tons, a gain of 4 per cent over the 91,692 tons of the next preceding month but 20 per cent under the total of 119,505 tons made in June of a year ago. The gain in June over May was due to an increase in the output of steel ingots to 91,694 tons from 86,040 tons; steel castings dropped to 3,627 tons from 5,652 tons in May.

External Trade.

A summary of Canadian trade by the Department of National Revenue shows that in June, 1930, the merchandise entering Canada for consumption amounted to $91,543,981 as compared with $101,544,817 in the preceding month and with $111,949,272 in June, 1929. The chief imports in June, 1930 were: Iron and its products, $21,476,104; Non-metallic minerals and products, $16,036,229; Fibres, textiles, and textile products, $11,001,970.

The domestic merchandise exported during June, 1930, amounted to $78,703,281, as compared with $77,260,557 in the preceding month and with $112,176,179 in June, 1929. The chief exports in June, 1930 were: Agricultural and vegetable products, mainly foods, $25,238,293; Wood, wood products and paper, $22,357,790; Non-ferrous metals and their products, $8,963,073.

Strikes and Lockouts

The time loss due to industrial disputes in July, 1930, was appreciably less than that occurring during June, 1930, and approximately only one-fifth as many workers were involved. As compared with July, 1929, the figures for July, 1930, show that only six strikes occurred during the month as compared with nine during the same month last year, and there was a reduction in the number of workers involved but an increase in the time loss incurred. There were in existence during the month six disputes, involving 240 workers and resulting in a time loss of 2,600 working days, as compared with six disputes involving 1,116 workers and resulting in a time loss of 3,351 working days during June, 1930. In July, 1929, there were on record nine disputes, involving 370 workers and resulting in a time loss of 2,279 working days. At the end of the month there were on record two disputes recorded as strikes or lockouts, involving approximately 25 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off, or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again lower at $10.91 at the beginning of July, as compared with $11.10 for June; $10.98 for July, 1929; $10.80 for July, 1928; $10.92 for July, 1927; $11.07 for July, 1926; $10.49 for July, 1925; $9.91 for July, 1924; $10.17 for July, 1923; $10.27 for July, 1922; $10.96 for July, 1921; $16.92 for June, 1920 (the peak); $13 for July, 1918; and $7.42 for July, 1914. The prices of beef, pork, mutton, butter, cheese, bread, flour, potatoes, sugar and prunes were lower, while slight increases occurred in the prices of eggs. Including the cost of fuel and rent with that of foods the total budget averaged $21.26 at the beginning of July, as compared with $21.44 for June; $21.26 for July, 1929; $21.01 for July, 1928; $21.10 for July, 1927; $21.30 for July, 1926; $20.70 for July, 1925; $20.30 for July, 1924; $20.65 for July, 1923; $20.67 for July, 1922; $21.53 for July, 1921; $26.92 for July, 1920 (the peak); $20.66 for July, 1918; and $14.17 for July, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, continued toward lower levels, being 85.8 for July, as compared with 88 for June; 96 for July, 1929; 96.2 for July, 1928; 98.5 for July, 1927; and 100.1 for July, 1926. In the grouping according to chief component materials six of the eight main groups declined, while two were unchanged. The groups which declined were: the Vegetables and Vegetable Products group, due to lower prices for grains, flour, rubber and sugar; the Animals and their Products group, due mainly to declines in the prices of steers, hogs, lambs, fresh meats, milk and butter; the Fibres, Textiles and Textile Products group, because of reduced prices for cotton, silk and worsted cloth yarns; the Wood, Wood Products and Paper group, because of lower quotations for certain lines of lumber; the Non-Ferrous Metals and their products group, due to decreased prices for aluminium, antimony, copper and zinc, which more than offset a slight advance in the price of silver, and the Chemicals and Allied Products group, because of reduced quotations for bleaching powder, red lead and shellac. The Iron and Its Products group and the Non-Metallic Minerals and their products group were unchanged.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF JULY, 1930

DURING the month of July reports were received in the Department of Labour from three Boards of Conciliation and Investigation established to deal with disputes between (1) Luscar Collieries Limited and certain of its employees, being members of Luscar Local Unit No. 24, Mine Workers Union of Canada; (2) Canadian National Railways and certain employees comprising the officers and crew of ss. *P. E. Island,* being engineers, mates, quarter masters, deck hands, firemen, etc., members of the Canadian Brotherhood of Railway Employees; and (3) the Shipping Federation of British Columbia, Limited, and Vancouver and District Waterfront Workers' Association.

Applications Received

During July applications for the establishment of Boards of Conciliation and Investigation were received in the Department of Labour, as follows:—

(1) from certain employees of the Saint John Branch of the Canadian Construction Association and other contractors of the city and county of Saint John not members of the Canadian Construction Association, being members of Local 568 of the International Hod Carriers, Building and Common Labourers' Union. In this case a Board of Conciliation and Investigation could be established only by mutual consent of the parties concerned, and, the consent of the employers being refused, no action was taken looking to the establishment of a Board.

(2) from certain employees of the Hydro Electric Commission of the city of Hamilton, being members of Local Union No. 138, International Brotherhood of Electrical Workers. The dispute related to the employees' request for an increase in wages, etc., forty-five employees being directly affected. A Board of Conciliation and Investigation was established by the Minister of Labour on July 17 and Mr. Fred Bancroft, of Oakville, Ontario, was appointed as Board member on the recommendation of the employees.

Other Proceedings

Reference was made in the June issue of the LABOUR GAZETTE to an application received from certain employees of various electrical supply firms of Saint John, N.B., in which request was made for a Board of Conciliation and Investigation to deal with a dispute relating to a proposed new wage agreement. Word was received during the month from the employees withdrawing the application.

Report of Board in Dispute Between Luscar Collieries Limited and Its Employees

The findings of the Board of Conciliation and Investigation established to deal with differences between the Luscar Collieries Limited and certain of its employees as represented by Local Union No. 24, Mine Workers' Union of Canada, were received in the Department on July 7. The dispute related to wages and working conditions. The report was signed by the Chairman, Mr. Fraser MacLean, and the Board member representing the employees, Mr. J. O. Jones. Mr. Mayne Reid, K.C., the employer's member of the Board, submitted a minority report. The text of the majority and minority reports follows:—

Report of Board

In the matter of the Industrial Disputes Investiation Act and of a dispute between Luscar Collieries Limited, Employer, and certain of their Employees as represented by Local Union No. 24, Mine Workers Union of Canada, Employees.

EDMONTON, ALBERTA, July 3, 1930.

To the Honourable,
The Minister of Labour,
Ottawa, Canada.

SIR,—The Board of Conciliation and Investigation appointed by you on the 21st day of May, 1930, to enquire into the matter above set forth, which is composed of Fraser MacLean, Chairman, Mayne Reid, K.C., and John O. Jones, has the honour to submit its report.

The Board had its first meeting on the 27th of May in the Board Room of the Luscar Collieries, Limited, Tegler Building, Edmonton, for the preliminary organization and swearing in of members, and again on the 28th of May, to discuss method of procedure, and adjourn until June 10, to meet at Luscar, Alberta, where sessions were held by the Board on June 10 and 11.

(The Employers) Luscar Collieries, Limited, were represented by R. G. Drinnan, General Manager, and A. N. Scott, Mine Manager: On behalf of the (Employees) Local Union No. 24 Mine Workers of Canada, James Sloan, S. Vining and W. A. Hughes.

The Board agreed to proceed with the clauses in dispute as laid in the Application of the Employees. Eight witnesses appeared before the Board and were examined. The Board adjourned at Luscar on June 11 to convene at the MacDonald Hotel, Edmonton, Board Room C, on Monday, June 16. Sessions were held on the 16, 17, and 18, where eight more witnesses appeared before the Board and were examined.

The Board adjourned until June 20, to meet at the Board Room of the Luscar Collieries Limited, Tegler Building, Edmonton. The Board also met in the same offices on the 23rd and 24th of June, which completed the sessions.

I might state at the beginning the Board used its efforts to see if it would be possible for Employers and Employees to come to an agreement, also after all evidence was in, members of the Board met to see if they could agree on an unanimous report, but without success.

Settlement of Disputes:

In regard to Clause C in the Miners Application Re Settlement of Disputes, the Miners are asking that this clause should be amended to do away with the Independent Chairman and have it that a Board of Conciliation under the Industrial Disputes and Investigation Act should be established. The Company in their statement of reply objected to this change on the grounds that the decision of a Conciliation Board is not binding on either party. I feel that disputes which come up from time to time during the life of the agreement must be settled and a decision rendered which will be final and binding upon both parties. An official of the Union whose name was on the Application for the Board, and who was a witness, expressed himself as follows:—"Regarding this change to a Board of Conciliation from an Arbitration Board, I do not think the ideas of the Employees and of the District, were really that the decision should not be final, but we though that in an Arbitration Board there is one individual, and we would rather have the ideas of three men." I agree that it would be better and more satisfactory to both parties, that an Arbitration Board of three should investigate and decide these matters and a majority decision of the said Board should be final and binding upon both parties. Therefore I would recommend that Clause C in the Agreement be amended to read as follows:—

(c) "In the event of the failure of the Pit Committee and the Mine Management to settle any dispute so referred to them, the matter in dispute shall be referred to the Mine Management and one or more District Officers of the Mine Workers Union of Canada, who shall endeavour to settle the dispute as speedily as possible. If they agree, their decision shall be final and binding on both parties. In the event of their failure to agree, they shall proceed to form an Arbitration Board of three, one to represent the Employers, and one the Employees, these two shall endeavour to select a Chairman; failing to select a Chairman the two shall ask the Federal Minister of Labour to select such Chairman, and this Board shall without delay consider the matters in dispute and a majority decision of the said Board shall be final, and binding on both parties."

New Work:

I recommend that this clause in the Agreement be amended to read as follows:—

"Whenever any new work arises, a price for which has not been provided for in this agreement, on the request of the Company or the Local Unit of Mine Workers of Canada, a joint committee of six (6), of whom three (3) shall represent the Company, and three (3) shall represent the Local Unit, shall meet within fourteen (14) days after the request for a new price shall have been made. If they shall agree, their decision shall be final and binding upon both parties. Should the joint committee fail to reach an agreement, the matter in dispute shall be referred to a Board of three, one to represent the Employers and one representing the employees, these two should meet immediately and try and agree on the selection of a Chairman, and failing to agree on a Chairman, they shall ask the Federal Minister of Labour to appoint such Chairman, and the Board so constituted shall consider the matter in dispute and a majority decision of said Board shall be final and binding on both parties. Whenever any new system is inaugurated, or radical change in the present system is made, where there is a contract price fixed, the Company or the Local Unit may ask for a price to be fixed on the work as new work, as, for example, a change from Longwall to the Pillar and Stall, or vice versa, shall be considered as "New Work." Meantime if the work is continued until such a price has been arranged, all men shall be paid on the Day Wage Scale."

Preference of Employment:

I recommend this Clause to be amended and to read as follows:—

"In case it is necessary to lay off any men in the various classifications of work, they shall be laid off according to seniority and put back to work in the same order. This does not apply to men discharged for cause, or leaving on their own accord. Checkweighmen shall come under this clause, and retain their seniority in the classification of work at which they were engaged before becoming Checkweighmen."

Wet Places:

I see no great reason why this clause should be changed at this mine. Therefore I recommend, this clause should be left as it is in the Agreement which was in effect until March 31, 1930.

Re Adjustment of the Following Day Wage Rates

Evidence being submitted that several companies had increased these rates; some in the form of bonuses, and others in the form of extra shifts, which were not worked, in order to bring the rates up to an equitable basis. Therefore I recommend that the following adjustments be made in the Day Wage Rates:—

Mine drivers to be raised from	$4 90	to	$5 10
Roperiders to be raised from	4 90	to	5 10
Railway car handlers to be raised from..	4 45	to	4 70
Firemen to be raised from. ..	4 45	to	4 75
Engineers, second class licence, to be raised from	5 70	to	6 80

According to tonnage submitted by the Company for 1928 and 1929, which was 246, 472 and 291,859 tons respectively, these increases recommended amount to approximately $2,700 per year, which would be about an average of one cent per ton.

Re Statement of Reply to Application by the Luscar Collieries Limited

The Company ask consideration of Contract Rates, which they asked to be included in a new agreement, namely, a rate of 25c. per ton for Pillar Coal in No. 3 Level East and No. 4 Level East, and a rate per yard for angles. The Employees representatives objected to these demands being considered by this Board. However, I find that Section 23 of the Industrial Disputes Investigation Act would lead me to believe that the Statement of Reply should be considered by this Board:

(1) A rate of 25 cents per ton for Pillar Coal in No. 3 Level East and No. 4 Level East: According to evidence submitted, this issue has been a controversy since 1926, and I believe the Contract Rates should be as uniform as possible in the district; so I am convinced, in the interest of all concerned, that the contract rate of 56 cents should apply to all coal, other than coal from flat pillars and development work.

(2) *Rate for Angles:* The Company have asked that these angles be driven 8 feet by 8 feet and the price of $8.26 per lineal yard be established, having in mind the rate at the Cadomin mine, who are their closest competitors. I find that this rate asked by the Luscar Collieries is equitable and I therefore recommend this rate.

Respectfully submitted.

(Sgd.) FRASER MACLEAN,
Chairman,

(Sgd.) JOHN O. JONES,
Member.

Statement of Explanation by Member of Board Representing Employees, Re Statement of Reply to Application in Connection with Pillar Rate of Twenty-five Cents.

(1) Rate of 25 cents per ton for Pillar Coal in No. 3 Level East and No. 4 Level East. I believe the tonnage per man at this mine is amongst the highest, especially the cost of coal should be lower at this mine than many other steam coal mines who are competing in the same markets. The contract rates should be as uniform as possible. According to evidence submitted, this issue has been a controversy since 1926; also I understand that other Companies have tried, from time to time for many years past, to establish this contention, which the Employees have persistently objected to, and if this were granted it would be possible for several mines in the pitching seams, to drive development plans through any similar piece of coal that may be encountered in future, in such a manner as will enable total extraction of the coal to take place. If this present rate of 56 cents is not disturbed the benefit will apply in a general way, both Company and Employees participating; but on the other hand should this rate of 56 cents be disturbed and a lower rate established, there might be a tendency on the part of the Company to avoid development work, not only on a pocket of coal of this kind, but in all places where coal would cave or run from the face in the regular seam. Therefore no end of friction would ensue from such practice. So I am convinced in the interest of all con-

cerned, that the rate of 56 cents should apply to all coal, other than coal from flat pillars and development work.

(Sgd.) John O. Jones,
Member.

Minority Report

822 Tegler Building,
Edmonton, Alta.,
June 27, 1930.

The Minister of Labour,
Parliament Buildings,
Ottawa, Ont.

Dear Sir,—

Re: Industrial Disputes Investigation Act and re: Differences between Luscar Collieries Limited and certain of its Employees as represented by Local Unit No. 24, Mine Workers Union of Canada.

The Board of Conciliation and Investigation appointed in connection with the above matter has now concluded its Sittings.

I regret that the members of the Board have been unable to agree, and I accordingly now submit my report.

The Dispute

Luscar Collieries Limited and its employees represented by Local Unit No. 24 of the Mine Workers Union of Canada entered into an Agreement regarding wages and working conditions on May 2, 1928. This Agreement expired on March 31, 1930, but the parties have since been carrying on as if it were still in force. The Agreement provided that a conference should be held within sixty days of the expiry thereof to discuss a renewal of the Agreement. The Company indicated its willingness to meet in conference for that purpose, but the employees' representatives refused to discuss the matter until April 2, apparently because in the meantime the officials of the Mine Workers Union of Canada were making an endeavour, which however proved unsuccessful, to negotiate a joint wages agreement covering certain other coal mines in the province.

At the conference which took place between the representatives of the Company and of the employees, beginning with that on 2nd April, the employees requested certain changes in the method of settling disputes, in the definition of a "wet place" in the mine, and in the rates of pay for certain workers. The Company on the other hand indicated that it wished changes in the contract rates for certain mining work, but it offered to renew the whole Agreement for a further period of two years without any change. This offer was declined by the employees representatives.

The Application

Application was then made in writing on behalf of the employees for a Board of Conciliation and Investigation, in which application there were set out as claims or demands the changes desired by the employees and above referred to.

The Reply

As required by the Act the Company filed a statement in reply. This reply set out the reasons why the Company refused to accede to the claims of the employees as set out in the application, and it also set out the changes which the Company desired in the contract rates for mining above referred to.

Sittings of the Board

At the request of the employees' representatives the members of the Board proceeded to Luscar, Alberta, where the Company's mine is located. The Board held sittings at Luscar and on returning to Edmonton additional hearings took place there. Representatives of the Company and of the employees were present at all sittings at which evidence was taken.

Employees' Refusal to Deal with the Company's Claims

At the hearing at Luscar the employees' representatives intimated that they declined to deal with the Company's claims set out in its statement in reply, taking the stand that the Board had no jurisdiction to deal with them on the ground that they were not included in the employees' application for the Board as matters in dispute between the parties. The majority of the Board (the Chairman and Mr. Jones) took the stand that they would not hear the Company's evidence on these claims at Luscar and that they would reserve the matter for decision later. I took the stand that the Company's claims must be dealt with, but as the chairman seemed to have a doubt on the point, I suggested to him that he should wire the Minister of Labour for an expression of opinion on the point. He agreed to do so and I understand that he received a wire in reply advising him that as the object of a Conciliation Board was the settlement of all matters in dispute between the employers and the employees the Company's claims should be dealt with and referred him to Section 23 of the Act, which reads as follows:

". . . . . the Registrar shall forward to the Board a copy of the application . . . . . and of the statement in reply and the Board *shall* forthwith proceed to deal with the matters referred to *in these documents.*"

Notwithstanding your ruling and the fact that every opportunity was given to the employees' representatives to present their case in reply to the Company's claims they refused to meet the Company's case, still claiming that the Board had no right to deal with these claims.

The attitude of the employee's representatives in this connection is hard to appreciate. They apparently want the company to sign a new agreement granting them certain concessions but they will not even discuss the changes sought by the Company.

The Company, however, presented its case to the Board for the changes sought by it in the presence of the employees' representatives.

The Employees' Claims

The employees made four distinct claims. As a matter of fact they submitted five, but I am treating the first and second claims as one as they are really both concerned with the one matter—the settlement of disputes. They are apparently willing to accept a new agreement in similar terms to the one which expired on 31st March last, provided that the Agreement is altered to meet the new claims. The claims are as follows:—

(1)—Settlement of Disputes.

Under the old agreement it was provided that in the event of any dispute arising between an official of the Company in charge of the work and any employee, whether as to the wages to be paid for new work or otherwise the Mine Superintendent and the Men's Pit Committee should endeavour to settle it, and if they agree their decision would be final. In the event of their being unable to agree, however, the Agreement provided that the matter in dispute should be referred to the Mine Superintendent and one or more District Officers of the Mines Union. If they came to an agreement their decision was final; but if they failed to agree the agreement provided that they should endeavour to agree upon an independent chairman, and if they could not agree in the choice of a chairman, they had to ask the Minister of Labour to appoint one, and the decision of that chairman was final and binding on both parties.

It will be seen that the agreement thus provides an eminently fair method of finally disposing of all disputes. The employees now ask that the provisions of the agreement calling for the appointment of an independent chairman be struck out, and that instead the failure of the Mine Superintendent and the men's representatives to reach an agreement, either as to the wages to be paid for new work or any other matter shall constitute a dispute within the meaning of the Industrial Disputes Investigation Act of Canada, and be referred to a Board of Conciliation under the provisions of that Act.

There are two objections to this proposal:—

(*a*) A dispute cannot be referred to a Board of Conciliation unless at least ten employees are affected (Section 22). It is quite obvious that disputes may arise in some cases where there are fewer than ten or even only one employee affected. For instance, suppose an employee should be dismissed and that he should claim that he has been wrongly discharged. Obviously the dispute affects only himself. Moreover, the granting of a Board of Conciliation is more or less in the discretion of the Minister of Labour. The men's proposal makes no provision whatever for settlement of disputes where the Board is not appointed by the Minister, either because the number of employees affected is less than ten or the Minister does not see fit to appoint a Board.

(*b*) A Board of Conciliation appointed under the Act does not settle a dispute. It merely investigates and makes recommendations, but neither party is bound to accept the recommendations. The men's proposal, therefore, is one which makes no provision for the final settlement of a dispute. In reply to a question the men's representatives admitted that they wished to preserve the right to strike, and that they were not now satisfied to refer disputes to the final decision of an independent chairman. It seems unfortunate that the men should desire to take this retrograde step and no reason whatever was advanced for desiring the change.

I, accordingly, recommend that no change be made in the wording of the Agreement regarding the settlement of disputes or new work.

(2)—Preference of employment.

The clause in the old agreement reads as follows:—

"In case an employee is thrown out of employment unless discharged or has left of his own accord he shall be given preference over a new man. Checkweighmen who have been previously employed in the Mine to be given preference over new men."

This clause was drafted away back in 1907 by the present Premier of Canada, who was then Deputy Minister of Labour. It has

proved quite satisfactory and is incorporated in practically all the agreements between operators of the steam coal mines and their employees. Moreover, the Mine Workers' Union of Canada, of which the Luscar employees form a unit, have recently signed agreements with other coal mining companies containing the same clause, and in one case—the Agreement with Brazeau Collieries Limited—an Agreement containing this identical clause has been signed by the employees since the Luscar employees made application for the Board of Conciliation. The new clause which the employees seek to have inserted in the Agreement reads as follows:—

"In case it is necessary to lay off any men, they shall be from the last men hired, but the men laid off shall be given preference over new men when such are required. This will not apply to men who have been discharged for cause, or have left of their own accord. During any slackness of work, the Company shall not hire any more men if the present crew are capable of meeting all requirements. Check-weighmen shall come under this clause."

Apparently, however, this clause as drafted does not set out accurately the employees' wishes, as their representatives stated that they wished the seniority rule to apply only in each class of employment, and one of them stated that in his view seniority should apply in favour of a member of one class of workers as against a member of a lower class of employment if he was capable of handling the work.

The Mines Superintendent stated that in laying off and taking on men he has always respected seniority of employment, other things being equal, but that in some cases he has to break away from the rule for reasons of efficiency, e.g. If it became necessary to lay off a carpenter whose services might be of value to the company in the event of work becoming more plentiful, he might put him on as a car handler rather than lose him. The employees admit that they do not wish to take away from the management the right to hire and discharge men. They were asked to give any particular cases of which they complained. Only two were referred to and these were both satisfactorily explained by the Mine Superintendent.

There appears to be a sort of unwritten law in these steam coal mines that once a contract miner has been given a working place he shall be entitled to keep it until it is worked out, no matter how long or short a time it may run.

I was not satisfied from the evidence that the contract miners wish to abandon this arrangement, which, of course, conflicts with the clause proposed by the men.

The Company's officials take the view that the proposed clause will deprive the Company of its right to hire and discharge men and will unduly handicap them in the management of the mine.

I recommend that the existing clause in the Agreement be allowed to stand.

(3)—Wet places.

Under the old agreement an employee who had to work in a "wet place" was entitled to an extra allowance of seventy-five cents per day. A "wet place" was defined as one in which there was standing water over six inches deep. The employees are satisfied with the amount of this allowance but ask that a place in which there is over two inches of standing water instead of six inches be now treated as a wet place. One cannot readily understand the motive behind this demand in view of the following established facts:—

(1) That six inches is the standard in all other steam coal mine agreements.

(2) That it was admitted that Luscar is not troubled with standing water.

(3) That the employees of Brazeau Collieries Limited which operates a steam coal mine at Nordegg, Alberta, and which employees are also members of a Unit of the same Trade Union as Luscar employees, have since this Conciliation Board was applied for signed an Agreement under which the standard is set at six inches and the daily allowance at fifty-five cents as contrasted with seventy-five cents at Luscar.

The employees representatives were asked to explain why the one set of employees should be satisfied with fifty-five cents a day and a standard of six inches, while the other is not satisfied with seventy-five cents a day and the same standard of six inches. No satisfactory explanation was given.

I recommend that the clause in the old Agreement regarding "wet places" be allowed to stand.

(4) Increase of Wages.

The employees ask for the following changes in the wage schedule:

Mine Drivers to be increased from	$4 90 to $5.10
Roperiders to be increased from	4 90 to 5 10
Firemen to be increased from	4 45 to 5 00
Power House Engineers to be increased from	5 70 to 7 20
Railway Car Handlers to be increased from	4 45 to 4 70

The Luscar Mine is one producing steam coal. The output is practically entirely sold

to the Canadian National Railways. There are ten large mines in Alberta producing steam coal, of these five are in the Crow's Nest Pass, one at Canmore, one at Nordegg, and three at Luscar, Cadomin and Mountain Park on the Alberta Coal Branch of the Canadian National Railways. Except at Canmore, where physical conditions are somewhat different, the rates of wages paid to employees in these mines have been uniform. This is almost necessarily so, as the companies are all producing steam coal and competing for the only large market, the two transcontinental railway systems.

The employees at some of these steam coal mines have within the past month or two signed new agreements providing for the same rates of wages as Luscar is at present paying, indeed the employees at Nordegg, who are also members of a Unit of the same Trade Union as Luscar employees have, since the Board of Conciliation was applied for by the Luscar employees, signed a new Agreement providing for the same rates of wages (with the exception noted below) as the Luscar employees are complaining about. No satisfactory answer has been given by the employees' representatives as to why the Union should attempt to secure higher wages at Luscar and insist on this demand whilst at the same time accepting a new agreement at Nordegg calling for the same wages as are paid at Luscar.

With reference to the application for an increase for Drivers, Roperiders and Box Car Handlers, it appears that the rates paid by Luscar are the same as those paid by all the other steam coal mines. The Luscar men have the advantage over the men at quite a number of the other mines as they appear to have had steadier employment.

Although the Board made a special trip to Luscar for the purpose of taking evidence not a single member of these three classes of employees was brought before the Board to give evidence, and no satisfactory reason was advanced for the granting of the application or why Luscar should be handicapped in its wages costs as against its competitors.

With regard to the claim advanced on behalf of the firemen, the following arguments were advanced in support of the application for an increase:—

(*a*) That the work on the day shift is too hard. The mine is running continuously and the twenty-four hours are divided into three shifts of eight hours each, the men taking the forenoon, afternoon and night shifts alternately, so that they work on day shift once in each three weeks. One of the engineers gave evidence that the work was at times too hard for the men. He, however, admitted that if a man were being overworked it was his duty to report it, and that as a matter of fact he had never reported to his superior that in his opinion any fireman was being overworked. His statement was exploded by one of the firemen themselves, who said "No, I do not want an easier job. I am quite satisfied with the Job."

(*b*) That a higher wage is paid to firemen at Cadomin and Nordegg. It seems that at Cadomin a bonus is paid to firemen who remain in the company's employment for more than three months. It was, however, admitted by a witness produced by the employees and who had worked as a fireman at Cadomin that in addition to firing two boilers of the same horse power as those at Luscar the firemen at Cadomin have to look after three boilers fitted with chain grates and in consequence the work is much heavier than at Luscar. The only other case cited was Nordegg, where the work is particularly hard owing to the company using the refuse from the dry washery to fire the boilers.

(*c*) That the cost of living is high. It is, however, just as high at all the other steam coal mines, and it is common knowledge that we are over the peak and the cost of living is now on the down grade. It is interesting to note in this connection that one of the firemen stated that his wages for 1929 came to over $1,700.

With regard to the claim for an increase of wages advanced on behalf of the Power House engineers the following arguments were put forward by the employees' representatives:

(1) That the wages are too low in comparison with those paid for similar work in other industries. In support of this contention various affidavits were produced. In spite of the very reasonable objection that evidence by affidavit should not be admitted as the company's representatives were unable to cross question the persons making the affidavits, the chairman allowed the affidavits to be filed with the Board. I understand that these affidavits merely show that in certain Municipally owned Power Houses in the larger cities in the province the rate of wages paid to engineers is higher than at Luscar. It was however shown that the wages paid at Luscar are in line with those paid at all the other steam coal mines and that the horse power of the Municipally owned Power Plants is very much higher than that at Luscar. With one exception no evidence was brought as to the wages paid to engineers in other industrial power plants in the Province. This is not an application for an increase in the wages of engineers at Coal Mines generally, but at one particular coal mine, and surely

the company's reply that as the other Units of the Trade Union to which the engineers have belonged have recently signed an agreement calling for the same rate of wages as are paid by Luscar, it is unreasonable to ask them to pay a higher rate than their competitors.

(2) That the wages are too low in view of the high cost of living. The position appears to be that at Luscar the engineers requested the Mine Superintendent to allow them to work shifts of twelve hours each instead of eight hours each. One of the engineers admitted that the twelve hour shift had been agreed to by the company at the request of the engineers. This same engineer admitted that his wages for the year 1929 amounted to $2,978.25.

I consider that the employees have not made out a case for the increase of any of their wages, but I would recommend that the company check up to see if any of the firemen are being overworked. The remedy for overworking a man is not to give him higher pay but to so adjust conditions that he only has to do a reasonable day's work. If on checking up it is found that any of the firemen are overworked on the day shift the company should put on another fireman.

I think that the twelve hours shift for engineers should be dropped and that instead of having two power house engineers working twelve hours each the company should as soon as possible have three men working eight hours shifts.

The Company's Claims

In their statement in reply the company requests that rates be established for the following items in dispute in any new wages agreement:

(*a*) A rate per ton for pillar coal in No. 3 Level East and No. 4 Level East.

(*b*) A rate per yard for angles.

As mentioned above the employees representatives absolutely declined to reply to this part of the company's case and objected to the Board's jurisdiction. The only evidence, therefore, before the board on these matters is that submitted by the company.

(a) *Rate per ton for Pillar Coal in No. 3 Level East and No. 4 Level East*

The company's submisisons in respect of this mater appear to be fair and reasonable. They contended that a rate of twenty-five cents per ton is a fair rate, having been based on an estimated daily wage for contract miners of Ten to Twelve Dollars.

(b) *Rate per Yard for Angles*

The company clearly showed the necessity for establishing a rate for angles. It is unnecessary to go into a technical explanation of this work, but the present method of pricing the work results in inefficient mining. The company submitted that a rate of $8.26 per yard on an angle 7 feet by 9 feet is a reasonable rate. As this rate corresponds with the rate paid at the Cadomin mine for similar work it appears to be a reasonable one.

I, accordingly, recommend that in any new agreement there shall be included the rate for Pillar Coal in the above levels and the rate for angles asked by the company.

The proceedings of the Board were all conducted harmoniously. It was gratifying to find that the officials of the company and the employees appeared to be on friendly terms.

Yours faithfully,

(Sgd.) Mayne Reid.

Interim Report of Board in Dispute Between Canadian National Railways and Certain of Its Employees on the Railway Car Ferry, S.S. "P. E. Island"

An interim report of the Board of Conciliation and Investigation established to deal with differences between the Canadian National Railways and certain of its employees being officers and crew employed on the Railway Car Ferry, ss. *P. E. Island*, members of the Canadian Brotherhood of Railway Employees, was received in the Department on July 12. The personnel of the Board was as follows: Professor Herbert L. Stewart, of Halifax, N.S., Chairman, appointed on the joint recommendation of the other Board members, Mr. James Friel, K.C., of Moncton, N.B., and Mr. J. L. Cohen, of Toronto, Ontario, nominees of the employer and employes, respectively. The text of the report follows:—

Interim Report

Of Board of Conciliation and Investigation appointed to examine the dispute between the Canadian National Railways and Employees on the Car-Ferry "P. E. Island," presented to the Minister of Labour, July 10, 1930.

In November last, the employees on the car-ferry "Prince Edward Island" presented to

the Canadian National Railways a proposed schedule of wages and working conditions, with the request that in these matters the crew should be represented by Mr. W. C. Smith, of Halifax, N.S. It was submitted on their behalf to the Conciliation Board that this request had been prompted by various grievances in regard to wages and hours of labour, that the lack of a union of employees to bring forward such grievances had prevented them from being clearly understood and promptly adjusted, and that there was no reasons why the advantage of collective bargaining conceded to employers elsewhere should be withheld in this case.

The Canadian National Railways declined to agree, on the ground that the proposed schedule—copied, in the main, from an existing agreement between the Company and its employees on land—was inapplicable to the crew of a ship. It took no account of such special circumstances as, for example, the hazard of wind and weather, of ice and fog which might make a rigid eight-hour day rule lead at times to great inconvenience and even danger. The Company further objected that the disciplinary powers of the Master of the ship, and his discretionary rights in an emergency, should not be disturbed by any hard and fast agreement, and that an attempted agrement on such matters might easily conflict with marine law. Finally, the Company declined to accept Mr. W. C. Smith, of Halifax, N.S., as representative of the crew, not on any personal ground, but because he was an official of the Canadian Brotherhood of Railway Employees, whose proper concern, they argued, is with land workers only. It was impossible, in the Company's view, to admit interference by any such organization in adjusting relations with the crew of this car-ferry. However, no objection would be made on their part to meeting in conference such representatives as the crew might select from *men in actual service on the "S.S. P. E. Island."*

After eight sittings and various individual conferences, and having heard representations on both sides (as set forth in the accompanying record) the Board judged it best to draw up an interim report. Considering first the questions of organization and representation, the Board was able to decide unanimously on its recommendations. It seemed in the general interest to issue these and immediately adjourn, that the parties might have an opportunity to act upon them in drawing up together a schedule of wages and working conditions which the Board might consider at a later date.

The general conclusions reached unanimously by the Board are the following:

(1) That there is need to establish a channel of communication through which employees on the car-ferry may bring grievances promptly to the Company's notice; that this would be valuable not only to the crew for rectifying real hardships, but also to the Company for disposing of hardships which are imaginary; and that the best means of such communication would be provided, here as elsewhere, by a union of employees choosing representatives to negotiate and deal on their behalf.

(2) That the Company was justified in objecting to the schedule proposed by the employees last November, because it took insufficient note of the special features that distinguish the ferry service between Cape Tormentine and Borden.

(3) That, without delay, a new agreement should be drawn up, to be signed by the Company on the one side and on the other side by members of the crew authorized by the crew as a whole to sign on its behalf. That this agreement, besides specifying rates of pay and regulations of labour in normal circumstances, should include also a clause relating to the special risks and abnormal sailing conditions from time to time incident to this service. It should make clear that nothing in the agreement shall be so interpreted as to conflict with marine law and custom in exceptional circumstances of climate and weather, or to interfere with the captain's discretionary power to suspend ordinary regulations and impose such exceptional discipline as he thinks fit at a time of emergency.

(4) That the employees should be free to appoint any spokesman or negotiator they may choose to represent them in settling the terms of agreement; and that if they select Mr. W. C. Smith as personally best qualified for this, no insuperable objection should be taken to him by the Company on the ground of his official status in the Canadian Brotherhood of Railway Employees.

(5) That the parties in this dispute, if the above recommendations are accepted by them, should without delay meet to negotiate a schedule, and should communicate its terms, or any outstanding points of difference, as soon as practicable to the Chairman of this Conciliation Board.

The Board takes much pleasure in being able to intimate to the Minister, not only that this interim report is made unanimously, but also that the parties to the dispute have agreed to accept its recommendations on the

points of principle, and to proceed at once with carrying them into effect. Further, the Board has to express its appreciation of the spirit of good will and mutual sympathy shown on both sides, which contributed so much to the success of this conciliation, and gives such promise that the settlement will endure.

The Board adjourned on Thursday, 10th July, 1930, to meet again at Halifax, N.S., on Tuesday, July 22, for reception and consideration of the proposed schedule.

(Sgd.) Herbert L. Stewart,
Chairman

(Sgd) J. L. Cohen,
" James Friel,
Members of Board.

Moncton, N.B.,
10th July, 1930.

Reports of Board in Dispute Between the Shipping Federation of British Columbia, Limited, and the Vancouver and District Waterfront Workers' Association.

Mention was made in the July issue of the Labour Gazette of the receipt of an interim report from the Board of Conciliation and Investigation established in connection with the dispute between the longshoremen at Vancouver, as represented by the Vancouver and District Waterfront Workers' Association, and the employers as represented by the Shipping Federation of British Columbia. During the month a supplementary report was submitted and the final report of the Board was received in the Department on August 9. The dispute arose out of the employees' request for increased compensation and the employers' desire to have the working conditions adjusted in certain respects. The personnel of the Board was as follows: Mr. J. B. Thomson, of Vancouver, B.C., Chairman, appointed on the joint recommendation of the other Board members, Messrs. J. E. Hall and R. B. W. Pirie, both of Vancouver, B.C., nominated by the employers and employees, respectively. The texts of the interim, supplementary and final reports follow:—

Interim Report of Board

In the matter of the Industrial Disputes Investigation Act and in the matter of a Dispute between the Vancouver and District Waterfront Workers' Association and the Shipping Federation of British Columbia Limited.

Introductory

Application having been made, pursuant to the provisions of the Act, by the Vancouver and District Waterfront Workers' Association, on 19th April, 1930, for the establishment of a Board of Conciliation and Investigation, and a statement in reply having been transmitted by the Shipping Federation of British Columbia Limited to the Registrar on 20th May, 1930, a Board was duly established, consisting of the following:—

J. B. Thomson,
Chairman.
R. B. W. Pirie,
Nominee of Association.
J. E. Hall,
Nominee of Federation.

The Board held fifteen sittings, commencing on 4th June, 1930, and continuing until 19th June, 1930, in the course of which numerous witnesses testified and a large volume of documentary and statistical evidence was submitted.

After careful consideration thereof the Board unanimously finds as follows:—

1. That the agreement covering wage rates and working conditions which expired on December 1, 1929, should be renewed with the following alterations.

From the evidence it is agreed by both parties that the formation of the Federation and the Association has been distinctly beneficial not only to the parties themselves but also to the City and Port of Vancouver, and that the agreement made between them on 1st December, 1924, setting forth the working arrangements between the parties and having appended thereto a wage schedule, rules and working conditions, has been, on the whole, and as modified from time to time, very satisfactory to all concerned from the time it was entered into to the date of expiration.

Among the beneficial results accruing from this agreement are the following:—

(*a*) Co-operation and harmony between employer and employees;
(*b*) Guarantee to workers of employment;
(*c*) More satisfied and more efficient employees with increased earning power, by reason of such guarantee, tending to produce a much better type of worker

and citizen than when work is casual and uncertain;

(*d*) Greater honesty with consequent reduction of pilfering, damage and destruction of cargo, making Vancouver the model port of the Pacific Coast, and an attractive and satisfactory one to shipping interests, exporters and importers, redounding to the benefit not only of the City of Vancouver as a whole but also to Western Canada.

The Board feels that it has no power to direct that an agreement be entered into, but it also feels that it would be delinquent in its duty if it failed to point out how highly desirable it is in the interests of all concerned that a just and fair agreement along the lines of the existing one be entered into, especially as a clause similar to clause 14 of the existing agreement (see Exhibit 2, Schedule 1) will adequately protect both parties against any hardship which might result to either under such an agreement, due to unforeseen happenings or changed circumstances.

A. That an increase in wages be allowed to longshoremen engaged on ships (for loading and unloading vessels) of 3 cents per hour and an increase of 2 cents per hour to men working on the dock for loading and unloading ships. At present the wage rates are 87 cents and 83 cents, respectively.

The reasons therefor being set forth in the submission of the Association (see Exhibit 1, page 3), namely:—

(*a*) Increased cost of Living.
(*b*) Increased Hazard of Work.
(*c*) Present Basic Wage being less than that of other Pacific Ports.

Evidence was submitted by the Association, based on figures taken from the LABOUR GAZETTE for April, 1930, page 457 (see Exhibit 3), and a comparison is made between the cost of living figures for the month of March in each year from 1924 to 1930, inclusive. This, in the opinion of the Board, does not constitute nearly as sound a basis of determination as do the figures given by the Federation in Exhibit 17, which show cost of living as follows:—

1924..	$21 91
1926-7..	22 16
1927-8..	22 47
1928-9..	22 85

It has been brought out in evivdence that, as the result of negotiations between the Federation and the Association during the life of the existing agreement, advances in wages had been granted on two occasions, totalling seven cents per hour to ship men and four cents per hour to dock men, as compared with the 1924 rates.

Major Crombie for the Federation, in answer to Mr. Pirie (see transcript of his evidence, page 9) stated that the average hours of labour for a period of 365 days was 5·32 hours per day in 1929. This shows clearly to the Board that the increase in wages already granted more than meets the increased cost of living.

To be specific:—

5·32 hours per day at 7 cents increases ..	37·42 cents per day
Cost of living increase over 1925..	19·5 cents per day

Further, it appears to the Board from an examination of the figures compiled by the Dominion Bureau of Statistics (not submitted in evidence by either party) that the present cost of living figures show a tendency to a further decline, the wholesale commodity prices for May, 1930, being 89·9 as compared with 91·7 for March, 1930. A general index shows this to be the lowest since 1916, while the wholesale consumer division shows a substantial decline for each month of 1930. It is, therefore, certain that drastic reductions may be expected in retail prices. Some lines have already declined 10 per cent, and the prices of eleven staples, as per the figures of the Canadian Grocers, show a decline of 12 per cent. These facts, while not given in the evidence, are common knowledge, and have a distinct bearing on the case.

The Board, therefore, can see no justification for an advance in wages, either from the evidence submitted by the Association, or from other facts which could be applied as an indication of present cost of living.

The second reason submitted by the Association for an increase in wages in Increased Hazard of Work. The evidence given by both parties in this respect is in full agreement, that the occupation is one in which the hazard is greater than in the majority of working activities. The Board, however, is not called upon to deal with the hazard of this occupation as opposed to that of other occupations, but rather with the question of increased hazard in that particular occupation when compared with 1924 and 1928. The evidence of the Association, which is fairly well set forth in Exhibits 4, 4A, being extracts from the Reports of the Workmen's Compensation Board, is not, in the opinion of the Board, fair and conclusive ground for determination, for the reason that the relation between acci-

dents of a severe character and the number of men employed is not reliably ascertainable, so that the loss of earning power per man employed at different times is of a very vague and indeterminate character. The evidence of the Federation, as per Exhibit 23, submitted by Major Crombie, indicates an increase in accidents of from 3 days to 6 weeks severity of 24·7 per cent in 1929 over that of 1927.

The figures given in said Exhibit 23 are:—

1927	243
1929	303

On the other hand, a decline of 26·8 per cent is shown by the same Exhibit in accidents of a severity measured by 6 weeks to 6 months incapacitation, the figures being:—

1927	56
1929	41

The Board considers that it is only fair to point out that the number of men actually despatched has also increased from 232,488 in 1927, to 247,828 in 1929, an increase of about 6·6 per cent over 1927.

It is to be noted, also, that the statistics presented by the Association (see Exhibit 1, page 4, "b") are for the Province of British Columbia as a whole, the Workmen's Compensation Board not segregating Vancouver from the rest of the province, while the figures submitted by the Federation apply only to Vancouver, the subject matter under consideration.

Exhibit 24 indicates that in 1927, 0·132 per cent or 1·32 per thousand of men despatched sustained compensable accidents, while in 1929, 0·138 per cent or 1·38 per thousand suffered similarly, an increase of 0·006 per cent or 0·06 per thousand men despatched for 1929 over 1927. This can hardly be regarded as material ground for increased wages.

In order to ensure that no available evidence material to the case should be overlooked, the Chairman of the Board obtained from Mr. Winn, Chairman of the Workmen's Compensation Board, a letter dated 12th June, 1930, which was placed in evidence as Exhibit 38. This letter discloses the following:—

Cost Rates	
1926	6·50%
1927	5·25%
1928	6·00%
1929	6·00%

From these figures it again appears to the Board that the increased wages granted as the result of negotiation very adequately takes care of the increased hazard and, in fact, none of the figures presented as to increased hazard indicates otherwise.

A great deal of time was spent by the Board in listening to cross-examination on hazard and the Board would point out that, by the employment of a safety engineer, the Federation has gone a long way towards ensuring safety for the worker and to have its members adopt a safety-first policy.

The transcribed evidence of Mr. Burgess, witness for the Association, clearly indicates that the old type of ship is passing out of the picture and has been replaced by newer ships, the machinery of which is most modern and much safer, with consequent less hazard to the worker. His evidence (see pages 9 and 15 of the transcription thereof) stresses his firm conviction that hazard is created by longer hours of work, which tends to take from the workers the ideal efficiency and alertness which, in the opinion of the Board, they otherwise should have. It is the view of the Board that this hazard situation might better be improved and minimized by an attempt to decrease the hours of work than by putting a premium on longer hours by payment of overtime rates of wages.

Dealing with the third reason advanced by the Association as set forth in section C (see Exhibit 1, page 4) namely, that the present basic wage is less than that of other Pacific Ports. While the Board notes from page 5 of the same Exhibit that 3 cents per hour less for Ship Work and 7 cents per hour less for Dock Work is paid in Vancouver than in Seattle, Tacoma, Portland and San Francisco, which assertion is borne out by Exhibits 6, 7, 8 and 9, the Board feels so many other factors may enter into the determination of wage rates at these Ports, such as higher cost of living, a lower average of available work per day, and other considerations, touching which no evidence has been presented, that the mere fact of a difference in the rate of pay, taken by itself, and without evidence as to other concomitant circumstances and conditions, is not conclusive ground for an increase.

The Board, therefore, finds that on the evidence adduced no case has been made out for an increase in wages on the reasons advanced.

2. The second submission (see clause "b" of the Application) is that the maximum hours of labour in any one day shall be not more than ten hours, when other members of the Association are available.

It has been brought out clearly in the evidence of the witnesses for the Association

that the reasons underlying this submission were twofold, namely:—

(*a*) To attain a fair distribution of work among the Association's members; and

(*b*) To reduce hazard by the elimination of long hours of labour.

It seems necessary to point out at the beginning that the question before the Board is not what is commonly termed "a ten hours' day." At present the standard day is one of eight hours, and there is no indication of a disposition on either side to make any change in that respect. The real point at issue is a desire on the part of the Association to limit a maximum of ten hours the duration of any one day's work. That being so, it is not at all clear to the Board what bearing, if any, Exhibit 10, page 383, has on the question. At present, thirteen hours is the maximum agreed upon. The Association's claim is that a ten hours' maximum would work to better advantage, and would attain the desired results, and could be brought into effect without hurt to the Federation by modifying the Rules and Working Conditions in such manner as might be found necessary to safeguard the Federation against incurring "Penalty" rates of pay. It has been contended by the Federation that the adoption of a ten hours' maximum would result in loss of gear and in efficiency of work, due to having to change men more frequently, and to having to break into the third shift. At present, a shift consists of four hours, and ten hours would be the equivalent of two and one-half shifts.

The evidence of Captain Edmund Aikman, General Superintendent of the Canadian Pacific Steamships Limited, and of Major Crombie (see transcript of his evidence of 10th June, 1930, pages 26-31) shows very clearly the objections of the Federation, but, after giving every consideration to this evidence, it is the belief of the Board that the argument alvanced by both parties to this dispute tends to show that the lesser hours of work would bring about higher efficiency and reduction of hazard, and would realize the expressed aim of the Association to attain a fairer distribution of work and more equitable earning opportunity among its members.

The Board is satisfied from the evidence submitted that the ideal working day is not more than eight hours, and that the Federation should endeavour to have all its members recognize this and be governed accordingly. The Board feels, also, that the adoption of a ten hour maximum per day should at least be given a fair trial for a period, as there does not appear to be evidence of sufficient weight to the contrary, nor to justify the continuance of the present thirteen hour maximum per day. It is the opinion of the Board that any loss which might accrue to the Federation from the changing of men or loss of gear would be compensated for by the higher efficiency of the men on the job, and the probable reduction of hazard.

The third submisison of the Association, as per section C of clause 1 in its Application, is "That a system of rotation of employment be adopted whereby gangs will receive a more equitable distribution of work."

The Board visited the Federation Hall on Dunlevy Avenue, and observed in practical operation the method of selecting and despatching men, which considerably clarified the Board's conception of the meaning of the evidence given on this point by both parties.

It is admitted by the Federation in evidence that under the present system of selection certain of its members have been unfair in giving preference to certain gangs. The evidence also convinces the Board that the Federation has tried to be fair, and to impress on its members the necessity and desirability of their dealing fairly with the Association in this respect. The problem is one not entirely under the control of the Federation, which is not in a position in its relation to its members to enforce its policies and desires, and it is admitted by the Federation that a complete solution of the difficulty has not been arrived at so far. Major Crombie has suggested to the Board that certain changes might be made by having employers make written reports to the Federation in all cases where such employers consider they have grounds for complaint or dissatisfaction in respect of the work of any gang or gangs, so that the Federation would be warranted in taking as a working assumption that all gangs against whom no complaints were made were prima facie acceptable to the employers.

The Board takes the view that the procedure, in conjunction with the adoption of a maximum working day of ten hours—which would prevent members of the Association who had already worked ten hours from being eligible so frequently—would go a long way to mitigate or remove the grievance of the Association as to "preferred gangs."

Mr. Macaulay, testifying on behalf of the Association, admitted that some men are more efficient than others, in the work of longshoreing. This is true in all walks of life. The gangs, being composed of individuals who are by no means of uniform capacity and ability, must inevitably in some measure differ from each other as to the character and

class of work performed. For illustration: On the Board's visit to the Federation Hall, it was observed that automobiles of many different makes were used by the workers. Each man has his own idea as to what car will give him the best service, and it is his unrestricted privilege to buy the one he prefers. The same principle should be applied when considering the right of an employer to engage his men.

The Board finds that the solution of this problem is not to be found in the adoption of a rotation system, nor in any attempt to compel employers to engage men who, in their opinion, are not the most suitable for their requirements. It is one thing for employers to recognize an Association or Union, and to confine their source of labour supply to members of such Association. It is another and a very different thing to ask employers to deprive themselves of the right to engage such members of the Association as the employers may from time to time consider best to meet their needs, and this right the Board upholds.

Subject to the above finding, the Board strongly recommends that all posible means be employed by the Federation to avoid and remedy the abuses which have been admitted to have in some instances prevailed in the past, and to have its members observe the spirit as well as the letter of a working arrangement of this kind.

Clause 2 of the application, sections A to F. inclusive, is not, accurately speaking, a submission of the Association, but is, rather, in the nature of objections taken by the Association to certain proposals of the Federation in the direction of modification of the existing agreement. In all cases the ground of objection is that, in the opinion of the Association, the changes sought by the Federation, if adopted, will result in reduction of the earning power of the Association's members.

Section A. reads:—"An alteration in the custom regarding foreign coastwise vessels wherey all vessels sailing beyond Cape Flattery and proceeding to the West Coast of the United States would be recognized as coast-wise shipping."

Mr. A. L. Palmer, of the Kingsley Navigation Company, testified to the handicap under which his company suffered under the present definition. Exhibit 32, being a copy of 73 B, Canada Shiping Act, Masters and Mates, Chapter 180, was entered, indicating the very wide range of the definition of foreign coastwise shipping within the meaning of that Act.

The apparent extra cost to that Company, as shown by Mr. Lucas in summing up for the Federation, amounted to only some $780 in wages, which would be lost to the members of the Association by placing the Kingsley Navigation Company under the proposed changed definition.

Exhibit 33, being the "report of a Special Committee *re* Definition of a Deep-Sea Vessel", shows that under the proposed new definition the Kingsley Navigation Company would pay less than at present for wages in handling cargo.

The Board is of opinion that the definition of foreign coastwise shipping contained in the Canada Shipping Act (Exhibit 32) covers altogether too wide a range of shipping routes to be considered as material evidence bearing on the point in dispute.

The Board is satisfied that Mr. Palmer's evidence does not show in a sufficiently conclusive manner justification for the Federation's request to extend to Californian Ports the definition of coastwise shipping, and that the extra wage cost to the Kingsley Navigation Company does not appear to be a very serious handicap to any shipping company, nor to be of sufficient importance to warrant the Federation to seek to alter an agreement with the Association, an agreement which the evidence has shown to have worked, generally speaking, to the satisfaction of both parties. The same conclusions apply to the evidence shown by Exhibit 33, which in the opinion of the Board, constitutes no adequate ground for change. It is apparent to the Board that cargo must be more carefully stowed when destined to points south of Cape Flattery, and no evidence of any considerable weight has been given to justify a lesser rate than the present one for handling cargo loaded to California Ports.

On these considerations the Board finds that the present definition should stand.

In section B of Clause 2 of the Application, objection is taken to the Federation's suggestion for "An amendment to the clause 'Waiting Time', which would cause a substantial reduction in those rates", meaning the rates of pay for "Waiting Time."

Similar objection is taken to section C. of Clause 2, for "An amendment to the clause 'Suspended Time', which would result in the employees' earnings being substantially reduced."

In dealing with "Waiting Time", it is necessary to make clear that "Waiting Time" is an entirely new definition introduced into the proposed new "Rules, Working Conditions and Schedule of Wages" put in by the Federation as Schedule 3 appended to Exhibit 2. The existing "Wage Schedule, Rules and Working Conditions" (See Schedule 2, appended to Ex-

hibit 2) contains nothing which quite corresponds, so that "Waiting Time" is not, strictly speaking, an amendment to something now existing, but is, rather, a new term sought by the Federation to be introduced as a convenient expression to denote a condition in regard to which the existing Rules were silent, unless by vague and uncertain implication. The nearest implied reference in the existing Rules to "Waiting Time" is to be found in Clause 6 under the heading "Stand-by Time", and nothing is expressly contained therein which meets the circumstances sought to be dealth with.

In order to make clear the distinction—and it is a very important one—it is desirable to set in contrast the existing definition of "Stand-by Time" (Schedule 2 to Exhibit 2) with the definitions of "Stand-by Time" and "Waiting Time" given in Clauses 11 and 12 respectively of the proposed new Rules (Schedule 3 to Exhibit 2) as follows:—

Schedule 2 to Exhibit 2 (Existing Rules).

Clause 6. Stand-by Time: When men are ordered for definite time and place and report ready for work, and no work is provided, but instead men are released, the following will apply. . . .

Schedule 3 to Exhibit 2 (proposed New Rules).

Clause 11. Stand-by Time: Stand-by Time applies when men are definitely ordered for work and no work is provided and men are released. . . .

Clause 12. Waiting Time: Waiting Time applies when men have been definitely ordered for work and have been despatched to work and/or report direct to the job and are waiting for the work to commence and are eventually put to work. . . .

From the above it will be seen that "Stand-by Time" as defined in the Existing Rules (Clause 6) and "Stand-by Time" as defined in the proposed New Rules (Clause 11) are, in effect identical, each providing for the contingency of men being definitely ordered for work, no work provided, and men eventually released.

The new expression "Waiting Time" (Clause 12) provides for the treatment of men who have been definitely ordered for work, despatched to work and/or report direct to the job, and, after waiting for work to commence, are eventually put to work.

The essential difference is in the eventual happening. In the proposed new "Stand-by Time" no work is provided and the men are released. In the proposed new "Waiting Time" work is provided (at a later time than anticipated), and the men are put to work.

It is quite apparent that the existing Rules are defective in making no explicit provision for "Waiting Time," and that the proposed new Rules, have, at least, the advantage—to all concerned—of recognizing and dealing plainly and explicitly with what is doubtless a frequent occurrence. Dealing first with "Stand-by Time" as defined in the proposed new Rules:—

Under the existing Rules "Stand-by Time" during normal working hours has to be paid for at approximately one-half normal pay. (See section A of Clause 6). Under the proposed new Rules "Stand-by Time" during normal working hours will be paid for in full. (See section B of Clause 2).

The provisions of the existing Rules (sections B and C of Clause 6) for the payment of "Stand-by Time" outside of normal working hours seem to be very unsatisfactory and capable of being interpreted and applied unfairly in practice. For example, Clause B provides that "If released between 5 p.m. and 1 a.m. and 7 a.m. and 8 a.m. two hours' time allowed," while an over-riding sentence, applicable to clauses A, B and C, alike, states that "The rate of pay is straight or overtime as the case may be." Under the provisions of Clause B a man might conceivably be held on "Stand-by Time" from 5 p.m. until 12.59 a.m. —a period of seven overtime hours—and yet paid only two overtime hours. Sections A to E inclusive of Clause 11 of the proposed new Rules are clear and explicit, except that the meaning of section D might be better expressed if the beginning thereof were modified to read, "If released after 1 a.m. *and before 7a.m. . . .*" On the whole, these provisions in the proposed new Rules give the men more generous treatment than those of the existing Rules, and have a marked advantage in being free from ambiguity, uncertainty of interpretation and application.

Under the provisions of Section E of Clause 6 of the existing Rules, when men were picked on Sunday or Holidays, payment was at one-half overtime rate from the time of picking until they are released or start work. Overtime being the equivalent of time-and-half, one-half thereof is the equivalent of three-quarters straight or normal time. While no special provision is made in the proposed new Rules for "Stand-by Time" on Sundays and Holidays (except in Section E of Clause 11, which provides for payment when men are released between 7 a.m. to at or before 8 a.m.)., the provision of sections C to E inclusive really attain the same end, and even better, by specifying "Full overtime" rates of pay.

A careful examination of the wording of section E of Clause 11 of the proposed new

Rules reveals to the Board a possible source of trouble in construing the same. The section reads:—

E. "If released between the hours of 7 a.m. and at or before 8 a.m., one hour overtime and one hour straight time (clause .. page ..) to be allowed. . . ."

Now a man may have earned stand-by time from say 4 a.m. to 7.30 a.m., that is, 3 hours at overtime rate and half-an-hour (presumably) at straight time rate, but because of the fact of his having been *released* at 7.30 a.m., a literal application of the terms of section E as it stands might yield him only one hour overtime and one hour straight time, which, clearly, is not the intention. The Board suggests that, to make the meaning and application clear, this section should be altered to read:—

E. "If released between the hours of 7 a.m. and at or before 8 a.m. one hour overtime and one hour straight time be allowed for this period, in addition to any stand-by time earned prior to 7 a.m."

The Board suggests that the word "when" might advantageously be substituted for the word "If" in all these sections, thus stating definitely what has to occur to make the clause effective.

The Board finds from the evidence that there is a real necessity to amend the existing Rules as to "Stand-by Time" (Clause 6, sections A to F inclusive), by reason of the very evident ambiguity and uncertainty in the interpretation and application thereof, and concurs with the Federation's desire to substitute therefor the proposed new Rules (Clause 11, Sections A to E inclusive), which are not only lucid and explicit (when the modifications above suggested are given effect to), but are not designed nor calculated to adversely effect the earning power of the members of the Association. We come now to the consideration of "Waiting Time" (Clause 12, sections A and B of the proposed new Rules).

We have already seen that the existing Rules seem to contain nothing which properly or clearly covers the happenings described under this definition, which is quite a new, but obviously a very necessary one. It seems to be quite clear that the intention of the Federation is to pay for "Waiting Time" as defined in clause 12 at one-half of the normal or overtime rate, whichever is applicable to the particular day (normal working day, Sundays or Holidays) or hours of the day (normal 8 a.m. to 5 p.m., all other hours being overtime hours) in which the "Waiting Time" occurs. If this is the intention, the Board thinks that section A of Clause 12 in the proposed new Rules would be made clearer and free from possible misconstruction if the words "Whether on week-days, Sundays or Holidays" were deleted. They seem to serve no useful purpose, but, on the contrary, tend to make uncertain the interpretation and application of this section.

Under the existing Rules, where there was no clear-cut distinction between "Stand-by Time" and "Waiting Time," and where uncertainty and ambiguity prevailed, to the constant anoyance of all concerned, the members of the Association may have enjoyed better remuneration for "Waiting Time" than the one-half of normal or overtime pay (as the case may be) provided in the proposed new Rules. The Board feels that there is considerable doubt if this is so, and the evidence submitted does not prove that the adoption of this clause will mean less wages to the men. The evidence of Major Crombie, transcript page 46, clearly indicates that it is practically impossible, until the change has been tried for a period, to determine how it will affect the workers. His testimony contained in transcript pages 47-51 shows forcibly the difficulty and troubles encountered in interpreting and applying the existing Rules as to "Suspended Time," which had to apply as far as it could be to "Waiting Time," and the abuses and loss to the members of the Association in some instances, and to the members of the Federation in others, resulting therefrom, and for which neither the Federation nor the Association could be blamed. The final submission of the Association (Exhibit 39, page 4) admits the sincerity of the Federation in its assurance to the Board that the motive underlying its desire to introduce this new clause, "waiting time" is to clear up an ambiguous and unsatisfactory situation, and not to reduce the earning power of the men.

The Board does not ignore the submission of the Association (Exhibit 21, pages 1 B.) in which it is pointed out that under the existing Rules whereby "Waiting Time" was not distinguished from "Stand-by Time," the men were paid one-half straight time but full overtime, and that it is now proposed to pay one-half straight time and one-half overtime, which evidently will mean a loss to the men of one-half overtime. It feels, however, that, even so, the Federation is not unfair in desiring to pay only one-half instead of full overtime for "Waiting Time." The men lose no work on this account, the work being merely deferred and still remaining to be done, while the employers can have no possible interest in deferring work, if it can be avoided.

On the whole, the Board approves of the suggested change as being in the best interest of both parties when everything is taken into account.

The next question in dispute is that of "Suspended Time." The Federation desires to modify the existing Rules (Clause 7, Schedule 2, Exhibit 2) in manner set forth in Clause 13, sections A, B and C of the proposed new Rules (Schedule 3, Exhibit 2). The essential change desired here is that, whereas at present one hour's suspended time carries no pay when the cause of suspension is shifting ship, under the proposed new Rules other two causes are added, namely, "weather conditions, or switching cars." It is contended by the Association (Exhibit 21, page 2 E.) that these provisions as set forth in section B. of Clause 13 of the proposed new Rules are capable of great abuse, in so far as by taking advantage of the provisions as to "weather conditions" the Federation might suspend work which had commenced only say one hour ago, hold men for one hour without pay, recommence work thereafter for any period, however short, again suspend work and hold men for another hour without pay, and so continue throughout the day.

This would, clearly, be most unjust, and operate strongly to the disadvantage of the men, and the Board feels sure that no such procedure is for a moment contemplated by the Federation. After careful consideration of the clause in question, the Board suggests that, in order to remove any possible misconception or abuse, the real spirit and intent be made clearer. As the Board understands the intention, "Suspended Time" can occur only during normal working hours, that is from 8 a.m. to 5 p.m. on ordinary working days, and that it is absolutely excluded during overtime hours, Sundays and Holidays. It also construes section B. of Clause 13 of the proposed new Rules—and section B. appears to be the crux of the whole question—as meaning that not more than one hour of Suspended Time without pay is expected in any one normal day, that is, between the hours of 8 a.m. to 5 p.m. in any ordinary working day. If so, the Board suggests that an addition to the definition of "Suspended Time" be made along the following lines, namely:—

"Suspended Time" can occur only between the hours of 8 a.m. and 5 p.m. on ordinary working days, and is expressly excluded from overtime hours on such days and from Sundays and holidays, which are deemed to be overtime hours."

Section B could also be clarified by adding thereto:—

"Not more than one hour of 'Suspended Time' without pay shall occur in any one day."

The Board views sympathetically the Federation's natural desire to broaden the probable causes of "Suspended Time" so as to include "Weather conditions and Switching cars" as well as "Shifting Ship," all of which are occurrences beyond the control of the Federation whose members should not justly be the sole loser by reason of such.

On the other hand, the Association members have a right to be protected against possible abuses due to lack of clarity in expressing the Federation's intention.

Accordingly, the Board is unanimous in approving the changes suggested by the Federation as to "Suspended Time", subject to the addition in the interests of clarity hereinbefore outlined.

The alterations sought by the Federation under the heading of "Special Commodities" (Clause 14 of Schedule 3 to Exhibit 2), are entirely in the nature of correction of an arithmetical error in the existing Rules (Schedule 2 to Exhibit 2, pages 6 and 7, Columns 7 and 8). The error is admitted by the Association, which agrees to the suggested change. (See Exhibit 21, page 2 D). The Board, therefore, concurs with both parties that the alterations be adopted.

In Section E. of Clause 2 of the Application, objection is taken by the Association to a proposal of the Federation to secure:—

E. "An amendment to the clause 'selecting hours' which would result in the employees' earnings being reduced."

The point in dispute under this head is obscure until a careful comparison is made between the provisions of the existing Rules and the proposed new Rules. The following extracts from the existing Rules will elucidate the contentious matter (see Schedule 2 to Exhibit 3):

Clause 5, Picking: (Foot of Page 5)

"For work commencing at any time after 8 a.m. on a Sunday or holiday, men will be picked at 8 a.m., 1 p.m., or 5 p.m., as the case may be, and *stand-by time shall be paid under Clause E, page 9.*"

Clause 6, Stand-by Time:

E. "When men are picked on Sundays or holidays, they shall be paid half overtime rate from the time of picking until they are released or start work."

The following is an extract from Clause 21 of the proposed new Rules:—

21. Selecting Hours—Dock Work:

"Foremen will be in the Despatching Hall at hours specified below to select men, . . ."

B. Sundays and Holidays:

8 a.m. for work commencing after 8 a.m. and before 1 p.m.

12.15 p.m. for work commencing on or after 1 p.m. and before 5 p.m.

4.15 p.m. for work commencing on or after 5 p.m. and up to 7 a.m. the following morning."

It will be seen that under the existing rules when men are picked on Sundays or holidays half overtime rate is paid from the time of picking until the men are released or start work. Under the proposed new rules nothing whatever is payable for any time elapsing between the hour of picking (on Sundays or holidays) and the time of starting work. Thus, men could be picked at say 8 a.m. and not start work until 12.59 p.m.—a period of five hours—and receive no pay. Manifestly, it is proposed to deprive the men of earning power which, rightly or wrongly, they now enjoy.

The evidence of Major Crombie as recorded on pages 54 to 58 of the transcript throws much illumination on the point of view of the Federation. In particular, on page 55, his testimony is that during the negotiations the Federation offered to pay "Waiting Time," which provides for one-half of straight time or overtime, as the case may be. On Sundays and holidays this would, of course, be one-half of overtime rate. Inasmuch as the definition of "Waiting Time" given in Clause 12 of Schedule 3 to Exhibit 2 reads: "Waiting Time applies when men have been definitely ordered for work *and have been despatched to work*. . . . ." it is more than doubtful if this clause would be deemed to apply to the conditions above stated, and it seems to the Board that if it is the intention of the Federation to pay for the time elapsing between picking and starting work on Sundays and holidays, then section E. of Clause 6 of the existing Rules should be added as a footnote to section B of Clause 21 in the proposed new Rules, so as to leave no doubt as to what is intended.

Major Crombie's evidence already referred to, makes it quite clear that the Federation aims at ultimately abolishing the picking system on Sundays and holidays at least, if not altogether. By the formation of ship gangs this has already been accomplished in the case of ship workers, and has much to recommend it from the standpoint of both the Federation and the Association. The picking system now applies to dock workers only, and the Federation, very naturally, desire to bring the gang system into force for dock workers also. No evidence has been submitted to the Board as to whether or not there are any serious difficulties in so doing, but on the face of it it seems possible that such a plan could be evolved and made to work satisfactorily. However, until this is an accomplished fact, or until some scheme is brought into force to obviate the necessity of men having to attend at the Hall at selecting hours in the hope of being selected, and to wait more hours between the time of picking (or "selecting," to use the new term), and commencing work there appears to the Board to be no justification for depriving the men of the benefit accrueing to them under existing rules, and the Board is unanimous in so finding.

The final section of Clause 2 of the Application is an objection by the Association to a proposed amendment sought by the Federation, namely:—

F. "An amendment to the clause affecting transportation and travelling time, which would also mean a reduction in wage rates."

During the morning session of 10th June, 1930, the Board listened attentively to statements made by Mr. Chance, District Assessor of North Vancouver, and Mr. T. H. Baird, Lumber Manufacturer, North Vancouver. Both gentlemen sought to show the Board that their particular section of the Harbour was labouring under a serious handicap, by reason of higher charges for stevedoring, brought about, they alleged, by the payment of travelling time and transportation to longshoremen. For instance, they asserted that these extra expenses increased the cost of lumber to the extent of over seven cents per thousand feet board measure.

Captain Baird, of the V. V. Stevedoring Company Limited, a witness for the Federation, gave evidence as to the additional cost to his Company in loading cargo at Barnet and other points, due to having to bear travelling time and transportation of ship and dock workers. He testified that the time required to reach certain sections of the Port where no travelling time or transportation was allowed was as much as that absorbed in going to non-travelling time points, contrasting the Pool Elevator with Barnet.

The evidence as a whole impressed the Board that the time is close to hand, if it has not already arrived, when the Port, notwithstanding its extensive area and somewhat widely-separated docks, must be viewed as a unit, in the interests of the community, and that no reasonably developed section should be placed at any disadvantage as compared with another. On the other hand, it has to be taken into consideration that, until development is further advanced at some of the out-

lying points, access and transportation facilities thereto will be and are correspondingly good, bad or indifferent.

There is no doubt that in time, possibly a very short time, the Harbour will have to be regarded as a purely local area, and that travelling time and transportation within its boundaries will have to be curtailed if not abolished. When this has been said, however, due and sympathetic consideration shall be given to the position in which the members of the Association find themselves in this respect in having to carry on work at comparatively widely scattered sections, access and facilities of transport to which, while much improved in recent years, still leave much to be desired, particularly in the way of frequency and convenience. It is quite evident to all concerned that out-lying points are not yet sufficiently developed to warrant the Association in establishing and maintaining branches or affiliations at such, so the question of travelling time and transportation is still something of a problem, in regard to which much could be said for both sides.

It is the desire of the Board to face and, if possible, to settle amicably, this question now, and on such a basis as may be calculated to remain undisturbed in principle as the Harbour expands and develops. In searching for a basic principle, the Board is unanimous in saying that the time absorbed in travelling should be regarded as a reliable guide to determine where travelling time should become operative. This leads quite naturally to the questions of determination of the starting point and a fair and just time limit. The practice of other and more fully developed ports is useful and helpful in this respect, although differences in geographical contour should not be ignored. Exhibit 6, "Wage Scale and Rules of the Port of Seattle," shows that no payment is made to the worker within the Harbour, which is defined as "all the navigable water within the city limits." Exhibit 7, "Wage Scale and Rules of San Francisco," provides for no travelling time to the worker so long as the work to be performed is inside what is termed "the City and County of San Francisco."

From Exhibit 6, "Wage Scale and Rules of Tacoma," it appears that time in excess of half an hour is paid as travelling time. Finally Exhibit 9 shows that in Portland no travelling time is allowed but transportation to Vancouver, Washington and all other points outside the city limits.

Taking all the circumstances into account, the Board is unanimous in finding that travelling time should not apply to points within the Harbour which can be reached by available public transport in a time not to exceed thirty minutes, according to the regular schedule, or by other transport provided by the Federation, when the time taken is within said limit, the starting point to be the nearest point of departure (from the Federation Hall) of available suitable transportation. Travelling time and transportation in excess of thirty minutes to be allowed in proceeding to all points within the Harbour which cannot be reached in compliance with the foregoing provisions.

Pursuing the matter a little further, the Board is unanimously of the opinion that consideration might be given by the Federation to the question of providing transportation or defraying the cost thereof to North Vancouver as well as the points named in clause 25, section A of the proposed new rules.

The foregoing completes the Board's findings and recommendations in respect of strict adherence to the actual points in dispute as per the submission and evidence made and given.

The Board has been much impressed with the reiterated assurances of the Federation that the last-named has no motive or desire whatsoever to interfere with or reduce the earning power of the workers, and with the spirit of moderation, broad-mindedness and sincere endeavour to preserve and foster harmonious relations which has been shown by both the Federation and the Association. The Board takes cognizance of the fact that during the negotiations which preceded the establishment of this Board, the Federation gave ample evidence of a willingness to deal justly and fairly with the Association.

It is sincerely hoped that this admirable spirit will continue and that the general lines of possible agreement indicated hereinbefore may even yet be developed by further negotiation, so as to bring about lasting harmony and mutual satisfaction.

A few concluding remarks may not be out of place.

The Port of Vancouver has been fortunate in the inception and organization of the Federation and the Association, both of which are to be congratulated on that attainment, and on the peaceful and harmonious manner in which, by friendly co-operation, they have on the whole so efficiently discharged their duties as Trustees in this particular sphere of the development and the welfare of the Port and City of Vancouver. It is only necessary to contrast the admirable condition of local shipping interests and dock workers today and for the past five years with the state of affairs prior to 1923, to realize the marked improvement which has taken place, an improvement the credit for which must be given

largely, if not almost entirely, to the exemplary attitude of each Body to the other, whereby the Port of Vancouver has enjoyed for this comparatively long period industrial peace on the Waterfront, to the great benefit of all concerned and to the City and Western Canada. The highest praise is due to the Administrative and Executive Officials of the Federation and also to the members of the Association, and to their worthy President and Secretary who, by their mutual tolerance and sympathetic appreciation of each other's difficulties, have brought about and maintained this happy state of affairs. The Federation Administrative Officials have shown admirable judgment and have been particularly happy in their choice of Major Crombie as their Chief Executive, having in him a man with the sympathetic touch and understanding disposition to which a body of workers readily respond.

It speaks volumes for the loyalty of the members of the Association one to another that they seek to equalize, as far as possible, the opportunities to work and, while the method suggested to attain this end can hardly be regarded as practicable at present, there is little doubt that, with a continuance of the same spirit of good-will and desire to act in harmony the Association, by striving constantly to admit and keep within its ranks only the best type of worker, and the Federation's members, by being willing to give every good man a chance, will jointly achieve the desired end. It is encumbent on the Association to aim at giving the best possible service, but it is equally encumbent on the members of the Federation to avoid the preference and discrimination which at times have occurred in the past. The key-note of modern business is co-operation and a recognition on the part of employer and employee that their interests are identical, not in opposition. In a very real sense they are partners. On the prosperity and success of the one depends the happiness and contentment of the other. A Chinese doctor is paid just so long as he keeps his patient well. When the patient gets sick the doctor's pay stops. The significance of this short story will be apparent to the Executives of both bodies.

The Board canot refrain from expressing its keen appreciation of the very evident consideration of the Federation for the comfort and welfare of its employees as indicated by its provision of an Employment Hall, equipped with shower baths, drying rooms, sanitary conveniences, a lunch room serving meals at reasonable prices, and a billiard and pool room to afford the men opportunity for recreation. These things indicate the high conception of the Federation of the ideal relationship between employer and worker. With so many evidences of common understanding existing between the two Bodies, it is unconceivable that all differences can be not adjusted amicably. The Board feels that their services will not longer be required but, if such is the case, gladly tender the same if it is felt they can be of assistance.

In conclusion, the Board would revert briefly to the question of safety and reduction of hazard. Longshoring is admittedly one of the most hazardous occupations and employers and workers should co-operate to the fullest extent in instituting and constanlty observing rules of safety. The Federation has at its own expense provided a very efficient Safety Engineer who, from all accounts, is an exceptionally good man with unlimited energy. In a letter dated June 18, 1930, addressed by Mr. Winn, Chairman of the Workmen's Compensation Board, to the Chairman of this Board Mr. Winn sets forth that since 1919 his Board has endeavoured to have a Tackle Inspector, otherwise a Safety Engineer, appointed by the Dominion Government (the Harbour being outside the jurisdiction of the Provincial Government), but without success. This Board takes the opportunity to place itself on record as endorsing Mr. Winn's idea, and feels that if a Safety Engineer were armed with Government authority to enforce suitable regulations the hazard to the worker would be substantially reduced. This Board now transmits Mr. Winn's letter to the Minister of Labour with the request and suggestion that he place this letter in the proper hands for what, it is hoped, will be favourable consideration.

Respectfully submitted,

(Sgd.) Jas. B. Thomson, *Chairman.*
(Sgd.) J. E. Hall, *Member.*
(Sgd.) R. B. W. Pirie, *Member.*
Board of Conciliation and Investigation.

The Workmen's Compensation Board
Vancouver, B.C.,
June 18, 1930.

James B. Thomson, Esq.,
Chairman, Board of Conciliation
and Investigation,
Vancouver Waterfront Workers,
Vancouver, B.C.

Re: Tackle Inspector

Dear Sir:—

Referring to your telephone conversation today; we find on looking up our records that as far back as 1919 we endeavoured to obtain the appointment of a Tackle Inspector for this Port. In recent years we have also taken up such an appointment with the Vancouver Harbour Commissioners.

The Board is without jurisdiction to deal with such matters as come under the heading of Navigation and Shipping, that being distinctly a matter over which the Federal Government, either through its various Departments or

through the Harbour Commission, has sole authority.

It is, we believe, self-apparent that an indipendent Inspector having to do with the inspection of tackle, equipment and proper lighting and having authority to enforce regulations is the one who should deal with all Accident Prevention matters.

The chief efficacy of such an Inspector is that he would be an independent arbiter as to the means to be used to safeguard the life and limbs of workmen. One cannot get the same independence of thought and action from an employee that one would expect from an independent official.

We have undertaken to supervise, without cost to the Department or Commission making the appointment, the work of such an Inspector so as to ensure uniformity of direction as well as fair treatment to all. We have on our Commission and staff competent engineers who, by reason of their accident-prevention experience, would be able to hold a firm hand on any official so appointed and in this way ensure competency. Inasmuch as our Board is the one to collect funds and to pay for disabilities, we are naturally more able to keep close supervision over those matters which go to Accident Prevention.

As it is now, a foreign boat may come into the Harbour with defective tackle and equipment; may employ its own longshoremen, kill or maim them and then leave (unless it is libelled by the injured workman or his representative) without in any way accounting for its casualties, thus leaving the cost to be borne by our citizens. The average longshoreman in case of serious disability—and I take it we would be in much the same position—does not think of his legal rights until he feels the pinch of need. By that time the ship has gone.

On the other hand, if the boat in question employs one of our Stevedoring Companies, then the Stevedoring Company and its employees are covered by the Workmen's Compensation Act and the result is that in event of accident the workman is compensated.

We trust we have covered your inquiry.

Yours very truly,
(Sgd.) E. S. H. WINN,
Chairman.

Supplementary Report

Supplementary to the findings of the Board in the matter of the Industrial Disputes investigation Act, 1907, and in the matter of a dispute between the Vancouver and District Waterfront Workers' Association and the Shipping Federation of British Columbia Limited, the Board are unanimous in agreeing to amend their finding in respect to travelling time as indicated on page 25 of the Interim Report of the Board, dated June 25, as follows:

"That the starting place should be from the Shipping Federation Hall to the place of employment, instead of from the nearest point of departure."

The Board are also unanimous in agreeing that their Interim Report be added to by the inclusion of the following clarifying clause in respect to payment of overtime:

"That full time be paid for all time in excess of one-half hour spent in travelling to or from points inside the harbour which come under the definition of 'travelling points'".

The Board are likewise unanimous in agreeing to the inclusion of the folowing definition of the arrangement in regard to Travelling Time, supplementary to the recommendation contained on page 25 of the Interim Report of June 25:

"That to all points where 'travelling time' applies as defined transportation be paid both ways by the Federation".

(Sgd.) JAS. B. THOMPSON, *Chairman.*
(Sgd.) R. B. W. PIRIE.
(Sgd.) J. E. HALL.

July 17, 1930.

Final Report

300 PENDER STREET, WEST,
VANCOUVER, B.C.
August 4, 1930.

The Deputy Minister of Labour and Registrar,
H. H. WARD, Esq.,
Department of Labour,
Ottawa, Ontario.

DEAR SIR,—The Board beg to report that they have been notified to-day by the Shipping Federation of British Columbia Limited and the Vancouver and District Waterfront Workers' Association that they have decided to come to an agreement based on the findings of the Board as set forth in our Report dated June 19, 1930, and as modified by our supplementary Report dated July 17, 1930, with the proviso that the Japan Dock and the Midland Pacific Elevator on the North Shore be considered as within the thirty minute radius for the purpose of dealing with travelling time.

A formal agreement is being prepared along these lines, to come into effect on August 15, 1930, and to remain in force for a period of three years.

The Shipping Federation of British Columbia Limited will forward you a copy of the Wage Schedule, Rules and Working Conditions (which are referred to and will form part of the Agreement) immediately on the signing of the agreement.

The Board requests that you will kindly inform the Hon. The Minister of Labour that the Interim and Supplementary Reports above referred to constitute the Board's final Report.

Yours faithfully,
(Sgd.) JAS. B. THOMSON, *Chairman.*
(Sgd.) J. E. HALL, *Member.*
(Sgd.) R. B. W. PIRIE, *Member.*
Board of Conciliation and Investigation.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Second Report of Proceedings of Board Covering Period January 1, 1928, to December 31, 1929 *

Official statement over signatures of Chairman and Vice-Chairman of Board with record of cases dealt with

Room 313, 360 McGill Street, Montreal.
January 23, 1930.

The following is the report of proceedings of the Canadian National Railways Employees' Board of Adjustment No. 2 covering the period from January 1, 1928, to December 31, 1929.

This Board was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees.

The members of the Board are appointed for a term of one year, subject to re-appointment, and it is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time in only one case has it been found necessary to appoint an arbitrator.

The Memorandum of Agreement constituting the Board reads as follows:—

Memorandum of Agreement Made Between the Canadian National Railways on the one part, and its Employees Covered by Schedule for "Clerks and Other Classes of Employees as Herein Named," as Represented by Their General Chairmen, Members of the Employees' Committee Which Negotiated This Schedule, on the Other Part.

The parties hereto agree to the establishment of a Board composed of members to be selected as hereinafter prescribed for the purpose of disposing of outstanding grievances or disputes that may arise from the application, non-application or interpretation of the schedule of wages and working conditions now in effect or hereinafter established, which are not promptly adjusted between the officers of the Railway and the Representatives of the Employees.

1. Now, therefore, it is agreed by and between the parties as follows:—

There shall be created, as soon as practicable, a Board to be known as "Board of Adjustment for Employees covered by Schedule for 'Clerks and Other Classes of Employees as Herein Named';" hereinafter referred to as the "Board" composed of eight (8) members, four (4) to be selected by the Railway, and four (4) to be selected by the Employees. The members shall be appointed for a term of one year, subject to re-appointment. Should a permanent vacancy occur on the Board such vacancy shall immediately be filled by the same authority as made the original selection, and in case of a temporary absence of any member, a substitute will be appointed by the same authority as made the original appointment. The employees' representatives on the Board shall be employees of the Railway. When necessary, and when mutually agreed, ex-employees may be named to represent employees.

2. The Board shall meet in the City of Montreal within fifteen (15) days after the appointment of its members, and select a Chairman and Vice-Chairman who shall be members of the Board. The Chairman or the Vice-Chairman shall preside at meetings of the Board, and both, if present, will be required to vote upon the adoption of all decisions by the Board.

3. The Chairman and Vice-Chairman shall serve for periods of twelve (12) months, and representatives of the Railways and of the Employees shall alternate in filling the positions. When the Chairman is a representative of the Railway, the Vice-Chairman shall be a representative of the Employees, and vice versa.

4. Unless otherwise decided by the majority of the Board, all meetings of the Board shall be held in the City of Montreal.

5. The Board shall render decisions on all matters of controversy as provided in the preamble hereto and when properly submitted to the Board. A majority vote of the full Board will be necessary for a decision which shall be binding upon both parties.

6. Cases not decided under Rule 5 at one session may be placed on the table for reconsideration at the next succeeding session. If no decision is reached by the Board, either the members of the Board selected by the Railway, or the members of the Board selected by the Employees may request that the case be submitted to an arbitrator, and in that event the Board shall at that session select the arbitrator.

7. Disputes arising will be handled as heretofore up to and including the general manager or corresponding officer of another department. If decision given is not satisfactory to

*The first report, covering the period from September 1, 1925, to December 31, 1927, was published in the Labour Gazette, October, 1928, page 1060.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

REPORT OF PROCEEDINGS—Summary of Cases Submitted to the Board from January 1, 1928, to December 31, 1929

Case No.	Case heard	Decision rendered	Department affected	Question	Synopsis of Decision
29	Feb. 21, 1928	Feb. 22, 1928	Operating Department, Atlantic Rgn.	Dispute *re* case of Mr. W. L. Pratt, Clerk, Freight Office, Campbellton, N.B.	Claim of employees denied.
30	Feb. 21, 1928	Feb. 23, 1928	Operating Department Atlantic Rgn.	Controversy regarding position of Checker at Long Wharf, Saint John, N.B.	Withdrawn.
31	Feb. 22, 1928 May 15, 1928 Aug. 21, 1928	Aug. 22, 1928	Operating Department Atlantic Rgn.	Controversy regarding position created in Division Engineer's office.	Employees' contention sustained: rate of position to be determined in accordance with Rule "C" of Article 11, and position bulletined in accordance with Rule "D" of Article 3.
32	Feb. 22, 1928	Feb. 23, 1928	Operating Department Atlantic Rgn.	Dispute regarding salary of stenographer, Sydney Freight Office.	Claim of employees sustained.
33	Feb. 22, 1928	Feb. 23, 1928	Operating Department Atlantic Rgn.	Claim of four freight truckers, Saint John, for time lost.	Claim of Employees denied.
34	Feb. 22, 1928 May 15, 1928	May 15. 1928	Operating Department Western Region.	Controversy regarding abolition of certain crew clerk position in West Yard Office, Winnipeg.	Board decides that dispute does not come within jurisdiction of the Board.
35	Feb. 22, 1928	Feb. 3, 1928	Operating Dept., Western Region.	Controversy regarding removal of Miss Mary A. Stark from the position of Bridge & Building Master's Clerk at Dauphin, Man.	That Miss Stark be given another trial as B & B Master's Clerk at Dauphin.
36	Feb. 23, 1928	Feb. 23, 1928	Account. Dept., Montreal.	Claim of Mr. F. P. Connolly, Auditor of Psgr. Accounts' Office, Montreal, for position bid in.	That the senior qualified applicant should be awarded the position.
37	Feb. 23, 1928	Feb. 23, 1928	Accounting Dept., Montreal.	Claim of Miss P. S. Crockett, Auditor of Psgr. Accounts' Office, Montreal, for position bid in.	That the senior qualified applicant should be awarded the position.
38	Aug. 22, 1928	Aug. 23, 1928	Operating Dept., Central Region.	Claim of employees of the Stores Dept., Montreal, to right to perform work formerly assigned to two positions classified as Storemen at Turcot Roundhouse, Montreal, Que.	That the dispute does not come within the jurisdiction of the Board.
39	Feb. 19, 1929	Feb. 19, 1929	Traffic Central Region.	Claim of Mr. Paul Ledoux, Ticket Office, Bonaventure Stn., Montreal.	That Mr. Ledoux be permitted to displace the fourth bookman at Bonaventure Stn Ticket Office.
40	Feb. 20, 1929	Feb. 20, 1929	S. D. & P. C. Central Region.	Claim of Porter John Lewis regarding his dismissal.	Claim of employees not sustained but Board recommended that consideration be given to employment of Porter Lewis in some other capacity than that of Porter-in-Charge.
41	Feb. 19, 1929	Feb. 19, 1929	Stores, Atlantic Region.	Claim of Mr. Frank J. Gallagher, Lumber Yard, Moncton, N.B.	Claim of employees denied.
42	Feb. 20, 1929	Feb. 20, 1929	Stores, Atlantic Region.	Claim of Mr. Alfred Pellerin and Francis Dever, Reclaim Plant, Moncton, N.B.	Claim of employees sustained.
43	Feb. 20, 1929	Feb. 20, 1929	Operating, Atlantic Region.	Dispute *re* back time for Chas. Paige, Advice Note Messenger, Sydney, N.S.	Claim of employees sustained.
44	Aug. 21, 1929	Aug. 21, 1929	S. D. & P. Car, Central Region.	Claim of Dining Car Employees Toronto Dist. *re* number of dining car crews assigned to Montreal-Toronto-Chicago Dining car run, trains 14, 15, 21 and 16 and with regard to number of additional days' layover required to conform to schedule.	That the employees' claim for seventh crew on this run be denied, and that the Dept. be requested to give the crews on this run the accumulated days of rest.
45	Aug. 21, 1929	Aug. 21, 1929	S. D. & P. Car, Central Region.	Claim of A. W. Hall, Sleeping Car Conductor, Toronto, Ont.	Claim of employees denied.
46	Aug. 21, 1929	Aug. 21, 1929	Operating Central Region.	Claim of Messrs. J. W. Malloy & J. H. Coughlin, Clerks, Supt.'s Office Saguenay Division, Que.	Claim of employees denied.
47	Aug. 22, 1929	Aug. 22, 1929	S. D. & P. Car, Atlantic Region.	Claim of Mr. Leo Marshall, Dining Car Steward, Halifax, N.S.	That Steward Marshall be returned to duty as a Steward, without loss of seniority, the time he has been off to count as suspension.
48	Aug. 22, 1929	Aug. 22, 1929	S. D. & P. Car, Atlantic Region.	Claim of Mr. Geo. A. Fraser, Sleeping Car Porter, Halifax, N.S.	Claim of employees denied.

Receipts and Expenses, January 1, 1928, to December 31, 1929

Receipts			*Expenses*	
January 1, 1928	Balance on hand	$178 64	Stationery and Printing	$ 10 50
June 15, 1928.	From Railways	200 00	Stamps	2 00
	From Employees	200 00	Secretary's Salary	600 00
October 15, 1929	From Railways	200 00	Balance on hand	366 14
	From Employees	200 00		
		$978 64		$978 64

the employees, the case may be appealed to the Board.

8. The Board shall have authority to make its own regulations as to when they shall meet and what records they shall keep, and all other matters pertaining to their activities, except such as are specifically covered by this agreement. The records to be kept shall include all matters submitted for consideration and all decisions made by the Board.

9. Each party hereto will compensate its own appointed representatives on the Board, and personal expenses will be cared for in the same manner. Any general expenses which may be incurred will be divided equally between the parties hereto.

10. (*a*) In each case presented to the Board an effort will be made to present a joint concrete statement of facts, but the Board is authorized to require information in addition to the statement of facts, and may call for additional evidence either oral or written, from either side. Either party shall be entitled to an oral hearing before the Board upon request.

(b) No grievance outstanding prior to January, 1925, shall be submitted to this Board for adjustment, unless by mutual consent of both parties to the agreement.

11. All disputes arising out of proposed changes in rates of pay, rules or working conditions, are specifically excluded from the jurisdiction of the Board.

12. This agreement shall become effective as of September 1, 1925, and shall remain in full force and effect until cancelled by thirty (30) days' notice given at any time by either party to the other.

On behalf of the Railways.

(Sgd.) W. U. Appleton,
General Manager,
Atlantic Region.

(Sgd.) A. E. Warren,
General Manager,
Central Region.

(Sgd.) W. A. Kingsland,
General Manager,
Western Region.

On behalf of the Employees.

(Sgd.) W. C. Smith,
General Chairman,
Atlantic Region.

(Sgd.) J. E. McGuire,
General Chairman,
Central Region.

(Sgd.) R. Dykes,
General Chairman,
Western Region.

Note.—On November 17, 1925, it was agreed that cases arising under schedules covering Sleeping, Dining and Parlour Car employees could be dealt with by the Board.

During the period covered by this report the following change took place in the personnel of the Board:—

Jan. 4, 1928: Mr. T. H. Cooper, Montreal, succeeded Mr. J. F. Aitchison as representative of the railway.

Officers Elected During Period

Mr. M. M. Maclean, elected Chairman, February 21, 1928.

Mr. H. Morton, elected Vice-Chairman, February 21, 1928.

Mr. H. Morton, elected Chairman, February 19, 1929.

Mr. C. H. Minchin, elected Vice-Chairman, February 19, 1929.

The Board at present consists of the following members:—

Employees' Appointees

Mr. M. M. Maclean, Ottawa, Ont.
Mr. A. R. Mosher, Ottawa, Ont.
Mr. N. L. Preston, Winnipeg, Man.
Mr. C. H. Minchin, Calgary, Alta.

Railways' Appointees

Mr. H. Morton, Moncton, N.B.
Mr. Geo. Turvey, Toronto, Ont.
Mr. G. S. Jessup, Montreal, Que.
Mr. T. H. Cooper, Montreal, Que.

The accompanying condensed statement of the cases which have been submitted to the Board for consideration and the decisions rendered in regard to them, as well as the financial statement covering the period from January 1, 1928, to December 31, 1929, are issued as a matter of record for the information of all concerned.

(Sgd.) H. Morton,
Chairman.

(Sgd.) C. H. Minchin,
Vice-Chairman.

Recent Cases Settled by the Canadian National Railway Employees' Board of Adjustment No. 2

Reports have been received of six cases recently settled by the Canadian National Railway Employees' Department No. 2. An outline of other recent cases was given in the LABOUR GAZETTE, April, 1930, page 377, and in previous issues. The origin, constitution and purposes of this Board are stated in the foregoing article in this issue.

Case No. 54.—Stores Department, Atlantic Region.

The position of storeman in the Moncton Stores having become vacant, the company appointed a "stockkeeper's helper," at wages of 52 cents an hour. The employees protested that the position should have been bulletined as "storeman," at the rate of $116 a month, the schedule classification for this postion. They cited Article 11 Rule (d) of the schedule, and claimed that the classification had been arbitrarily changed for the express purpose of reducing the rate of pay. On the other hand, the management claimed that the appointment was in line with the policy of the management in connection with appointments in other District stores.

The Board sustained the claim of the employees.

Case No. 55.—Stores Department, Atlantic Region.

This case related to an appointment to the position of storekeeper, which had been created recently in the Moncton General Stores. The employees objected to the appointment of a labourer to this position at the rate of 50 cents an hour, claiming that according to the schedule a newly created position should be advertised and awarded to the senior qualified applicant, and that this position should be rated at $116 a month, the rate for storekeepers. The general storekeeper then bulletined the position under the classification of stockkeeper's helper at the rate of 52 cents per hour. The company denied that the position of storekeeper had been established, and contended that stockkeepers were doing the required work in the other regions.

The Board sustained the claim of the employees.

Case No. 56.—Operating Department, Lines in Canada.

This case related to the claim of the hourly rated employees in the Motive Power, Car and Stores Departments, that their hours of service were reduced contrary to Article 3, Rule P of the schedule for "clerks and certain other classes of employees." Notice had been given by the company to the employees that, from May 1, 1930, their weekly hours of assignment would be reduced from 48 to 40 hours. The article referred to reads as follows:—

"When the management desires to effect a reduction in expenses, in order that the senior employees on the particular staff may be given full-time employment, the staff will preferably be reduced where it is considered practicable to do so, and when the interests of the railways will not suffer thereby, unless otherwise desired by the employees locally and arranged through mutual understanding with the General Chairman and the proper officers of the Railways."

The employees contended that this article provides that when the Management desires to effect a reduction in expenses, the staff will preferably be reduced where it is considered practicable to do so, unless otherwise desired by the employees locally, in which event there shall be a mutual understanding between the General Chairman and the proper officers of the railway. They further claimed that in arbitrarily reducing the hours of the hourly rated employees in these departments to forty hours per week, the company violated Article 3, Rule P, in two particulars:

1. That it had not been shown that it was not practicable to reduce the staffs at roundhouse points where a seven day service is required; and (2) that as there was no request from the employees concerned for a reduction in hours to forty hours per week in preference to a reduction in staff, the reduction in hours should only have been made after a mutual understanding had been reached between the Management and the General Chairman. They contended, therefore, that employees in these departments at roundhouse points should be restored to the 48 hour week, and that the employees who lost time as a result of the reduction in hours, should be compensated therefor at their regular rate of pay.

On the other side, the company contended that the conditions prevailing were such that under Article 3 Rule P (quoted above) they were justified in reducing the working hours of the employees from 48 to 40 hours per week.

The Board was unable to reach a decision in the case, and the question of reduction in hours instead of reduction in staff was referred to an arbitrator under the provisions of the agreement constituting the Board. Mr. G. S. Currie, of Montreal, was appointed arbitrator, and he heard the case in Montreal on June 10, 1930. He rendered the following decision on July 2, 1930:

"The working hours of classified labourers and common labourers at roundhouses and outside car repair points, also Stores Department employees at such points should be restored to forty-eight hours per week."

Case No. 57.—Accounting Department—Headquarters.

The position of assistant sub-chief clerk at Montreal was bulletined as vacant on July 2, 1929, and was awarded to a junior applicant. The employees contended that under Article 2, Rule (E) of the schedule covering the Headquarters Staffs, the position should have been awarded to another applicant, who was senior to the successful applicant. The company contended that although the complainant had the longer service of the two, he was not the "senior qualified applicant," and that the appointment was in accordance with the above mentioned article, which requires applicants for supervisory positions to have the ability to supervise the work of other employees, and that in making such appointments the General Auditor of Revenues shall be the judge.

The Board denied the claim of the employees.

Case No. 58.—Accounting Department, Headquarters.

This case concerned the claim of employees in the Auditor of Agencies Office, Accounting Department, Montreal, respecting the refusal of the management to bulletin position of "Checker, Freight Government" rate $130 per month, when it became vacant.

Following a conference of the parties to the dispute on May 22nd, and with the approval of the Board, this case was withdrawn by the employees.

Case No. 59.—Sleeping, Dining and Parlour Car Department, Halifax, N.S.

A dining car waiter was laid off for two days, his place being filled by a junior waiter. He claimed pay for these two days, the claim being based on Article 2 Rule J of the Schedule governing employees in the Sleeping, Dining and Parlour Car Service, effective September 1, 1927, which reads in part as follows:

In the event of a reduction of staff, senior qualified employees shall be given preference of employment, and employees laid off will be given preference of re-employment when staff is increased.

The company stated that the employee had been displaced owing to the introduction of a new rule of the Sleeping and Dining Car Department to the effect that one of the waiters on certain trains must be able to speak French, and that the waiter in question could not speak that language. The employees contended that this new rule involved an unwarrantable expansion of the term "qualified waiter," and that ability to speak French had never been considered a necessary qualification for a waiter. They claimed further that the language qualification had not been considered by the Negotiating Committee in drawing up the schedule. Such innovations, they claimed, should be made only by agreement with that Committee.

The Board decided that the waiter should be allowed pay for the days on which he was held out of service.

COMPULSORY ARBITRATION IN GERMANY

ACCORDING to the July 14 issue of *Industrial and Labour Information,* published by the Industrial Labour Office at Geneva, an arbitration award reducing wages in the iron and steel industry was recently declared binding by the German Minister of Labour.

In April, 1930, the trade unions of metal workers notified their intention of terminating the collective agreement with the employers of the north-west group of the German iron and steel industry, unless their demands for improved conditions of work were accepted. They demanded the 48-hour week, and new regulations governing overtime and holidays with pay. Direct negotiations between the parties failed and the dispute was submitted to the official conciliation officer. The employers claimed that the state of the industry was such that production costs must be reduced, and that this could not be done without a reduction in wages. On May 26, an arbitration award was issued conceding the employers' demand for the abolition of the clause of the award made in December, 1928, which provided that the prevailing piece rates might not be changed except as a result of improvements in technical processes or organization, and authorizing a reduction of the total wages bill by 10 per cent.*

* The collective agreement fixes the proportions between the wages of all classes of workers, according to sex, age, experience, skill and district, and the appropriate wage of any worker is expressed as a percentage of one basic wage. Rates for piece workers are fixed locally, and must be such as to enable the workers to earn at least 15 per cent more than the minimum time rate for the corresponding group.

The workers' representatives rejected the award, whereupon the employers applied to the Federal Minister of Labour to declare it binding. In the discussion at the Ministry no agreement could be reached. Eventually the employers agreed to limit the reduction to 7½ per cent of the wages and salaries bill. On this basis the award was declared binding by the Minister of Labour. Employers are thus entitled to reduce all rates in excess of the basic wages to such an extent that a saving of 7½ per cent of the total wages bill will result. The cut is to be conditional upon a reduction of prices to become operative one month before the reduction of wages. The Minister may, with the assistance of experts, ensure that the price reductions are adequate. Generally, the basic rates remain unaffected by the award, but slightly increased minimum rates are provided for auxiliary and juvenile workers. This is the first time that an attempt has been made to influence prices by means of the official arbitration machinery. It seems to be supposed that the fall in wages will utimately be counter-acted by a fall in the prices of consumers' goods.

The Minister of Labour, Mr. Stegerwald, is reported to have stated that he declared the award binding because the trade unions had given notice of terminating the collective agreement at the wrong moment; the award did not change the basic wages, and in the interest of the State it would have been undesirable to leave one of the most important industries without an agreement, which would have led to disputes; moreover, the employers had undertaken to reduce the prices of iron and steel to an extent exceeding the reduction of wages of piece workers.

The award accords certain advantage to the workers in connection with family allowances.

In trade union circles it is reported that the award is regarded as marking the beginning of a general campaign for the reduction of wages, and it is therefore likely to be opposed.

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1930

THE number of strikes and lockouts in existence in Canada during July was six, the same number as during the preceding month. The time loss for the month was appreciably less than that occurring during June, and the number of workers involved was much smaller than in the latter month during which a short strike involving some eight hundred coal miners at Glace Bay caused a substantial increase in the number of workers involved. As compared with July, 1929, the figures for July, 1930, show that, while only six strikes occurred during the month as compared with nine during the same month last year, there was very little difference in the number of workers involved and the time loss incurred.

Date	Number of disputes	Number of employees involved	Time loss in working days
*July, 1930	6	240	2,600
*June, 1930	6	1,116	3,351
June, 1929	9	370	2,279

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Five disputes, involving 195 workers, were carried over from June but detailed information as to only one of these was included in the July issue of the LABOUR GAZETTE because particulars as to the others had not been received and one dispute commenced during July. Of these six disputes four terminated during the month, two being in favour of the workers and two in favour of the employers. At the end of July, therefore, there were on record two disputes recorded as strikes or lockouts, namely, men's clothing factory workers at Montreal, P.Q., and motion picture projectionists at Vancouver, B.C.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is avail-

able as to three such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; plumbers, Kingston, Ont., April 2, 1928, several employers; and photo engravers, Toronto, Ont., January 7, 1929, one employer; coal miners, Mercoal, Alberta, one employer.

A minor dispute occurred on July 7, 1930, when fifteen to twenty messenger boys employed by a telegraph company at Ottawa ceased work for two or three hours because they were not allowed to wear the flannel shirts provided by the company for hot weather instead of tunics on that particular day and during the rest of the summer. Their demand being refused, work was resumed within a short time.

Information has reached the Department as to a dispute on April 16, 1930, involving thirty employees of a lumber company at Extension, B.C., against a wage reduction of 25 cents per day. Work was resumed the next day at the reduced rates.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

Coal Miners, Mercoal, Alta.—In the last issue of the Labour Gazette reference was made to a strike of coal miners at Mercoal, Alta., in June, as to which no particulars had yet been received. Reports later secured indicate that on June 14 about thirty men out of eighty ceased work when the company renewed an agreement with the United Mine Workers of America providing for the "check off," the collection of union dues from the workers' pay, and the same wages and working conditions as in the previous agreement. The men ceasing work were members of the Mine Workers' Union of Canada and claimed that the majority of the workers belonged to that union. The employer reported that the mine continued in operation and the men were replaced by July 4. The Mine Workers' Union of Canada still regards the dispute as in progress, and in connection with picketting, the provincial police were dispatched to the scene toward the end of July.

Hat Factory Workers, Montreal, P.Q.—In the last issue of the Labour Gazette reference was made to a dispute involving

STRIKES AND LOCKOUTS IN CANADA DURING JULY, 1930

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress prior to July, 1930.			
Mining, Non-Ferrous Smelting and Quarrying—			
Coal miners, Mercoal, Alta....	30	100	Commenced June 14, 1930; against agreement with another union. Workers replaced by July 4, 1930. In favour of employer.
Manufacturing—			
Clothing (including knitted goods)–			
Hat factory workers, Montreal, P.Q.....	15	150	Commenced June 27, 1930; for union wages and working conditions. Terminated July 15, 1930. In favour of workers.
Men's clothing factory workers, Montreal, P.Q.....	21	500	Commenced about June 15, against changes in working conditions; unterminated.
Construction—			
Buildings and Structures—			
Painters, Halifax, N.S.....	125	1,750	Commenced May 1, 1930; for increase in wages. Terminated July 18, 1930. In favour of employers.
Service—			
Recreational—			
Motion picture protectionists, Vancouver, B.C.....	4	32	Alleged lockout, commenced June 23, 1930; against reduction in wages; unterminated.
(b) Strikes and Lockouts Commencing during July, 1930			
Construction—			
Buildings and Structures—			
Carpenters, Quebec, P.Q.....	45	68	Commenced July 22, 1930; against violation of agreement as to rate for overtime. Terminated July 23, 1930. In favour of workers.

hat factory workers in an establishment in Montreal, commencing in June, as to which particulars had not been received. Later reports show that employees ceased work owing to a dispute as to the interpretation of the union agreement, and this having been settled, work was resumed on July 15.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—Employees in a men's clothing factory ceased work during June against changes in working conditions from those provided for in the union agreement. At the end of the month the dispute was unterminated. No information as to this dispute had been received in time for the July issue.

PAINTERS, HALIFAX, N.S.—The strike of painters in Halifax, commencing May 1, 1930, to secure an increase in wages from 73 cents per hour to 90 cents, was terminated on July 18 by the return of the workers at 73 cents per hour. As stated previously, a number of strikers secured work for a considerable time during the dispute at 80 cents per hour, a rate at which the union was willing to settle.

MOTION PICTURE PROJECTIONISTS, VANCOUVER, B.C.—Motion picture projectionists in two theatres in Vancouver ceased work on June 23, 1930. The employer had proposed a wage reduction from $65 per week to $50 and the union agreed to accept $57.50. After conferences between the parties the employees were notified on June 23 that their services were no longer required and they were replaced. At the end of the month no termination had been reported.

CARPENTERS, QUEBEC, P.Q.—Carpenters working on one building ceased work on July 22, 1930, to secure time and one-half rates for overtime in accordance with an agreement providing for a nine hour working day, the contractor wishing to work ten hours with straight time for the tenth hour. Work was resumed the next day on the understanding that time and one-half would be paid for all time worked over nine hours.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1930, in the review of Strikes and Lockouts in Canada and Other Countries, 1929. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes reported as beginning in June was 33, and 12 were still in progress from the previous month, making a total of 45 disputes in progress for the month, involving 52,300 workpeople and resulting in a time loss of 429,000 working days for the month. Of the 33 disputes beginning in June, 3 were over demands for increases in wages, 5 over proposed reductions in wages, 9 over other wages questions, one on a question of working hours, 7 on questions respecting the employment of particular classes or persons, 6 on other questions as to working arrangements and 2 on other questions. Settlements were reached in 23 disputes, of which 6 were settled in favour of workpeople, 9 in favour of employers, 8 ended in compromises; in 2 other disputes, work was resumed pending negotiations.

Irish Free State

A strike of 100 omnibus drivers in Dublin, which lasted for several weeks, at one time threatened to develop into a general strike of all railway workers in the Irish Free State. The omnibus drivers went on strike for recognition of their union as affiliated with the railwaymen's union. About 600 railway workers refused to handle goods consigned by the omnibus company and most of these were dismissed. A general strike of all railway workers on the Great Southern Railway lines was called for July 23, but through the intervention of the government, the dispute was settled, the companies agreeing to recognize the affiliation between the omnibus drivers' and railwaymens' unions and to reinstate all dismissed employees.

France

On July 1, a new social insurance law came into effect in France (LABOUR GAZETTE, June, 1930, page 623), providing for a national and

compulsory system of insurance paying benefits in case of death, disability, maternity and old age, and applying, it is estimated, to 9,000,000 workers. The government pays one-half of the premiums, the employers one-quarter and the workers one-quarter, which would amount to about 4 per cent of their earnings. In some districts, the workers alleged that the cost of living was raised following the enforcement of this law, and they demanded increases in wages to cover the increased cost of living and their premiums under this law. Strikes began of textile workers in North Eastern France during the latter part of July and the beginning of August. Iron and steel workers also became involved. It was estimated that between 100,000 and 150,000 were involved by August 5.

United States

The number of disputes beginning in May was 57 and 38 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 5,594 and the time loss 284,056 working days.

COMBINES INVESTIGATION ACT

Investigation into Alleged Combine of Electrical Contractors

AN investigation under the Combines Act into an alleged combine of electrical contracting firms in the city of Toronto was completed during the month of July. The report of Mr. T. N. Phelan, K.C., who was appointed as a commissioner under the Combines Investigation Act to conduct the investigation, had not been received at the end of July.

Practically all of the larger firms engaged in the electrical contracting business in Toronto were found to have been members of the alleged combine, which operated through an organization formed in 1927 for the purpose of allotting contracts among its members by a system of agreement on tenders. The membership of this organization, known as the Electrical Estimators' Association, consisted of seventeen electrical contracting firms. A secretary was employed by the Association and an office was maintained in Toronto where meetings of members were held and where the business of the Association was carried on. The Association was financed mainly by a levy of two per cent of the contract price on each job awarded through the system adopted by its members.

Preliminary inquiries into the alleged combine were commenced in October, 1929, following the receipt of complaints relating to its operations. The commissioner, Mr. T. N. Phelan, K.C., of Toronto, was appointed in May, 1930. The evidence of witnesses was taken in private hearings in Toronto by Major N. F. Newton, barrister ,of Parkhill, Ont., as counsel for the commission. A public hearing of the representations of counsel for members of the alleged combine and counsel for the commission was conducted before the commissioner from July 15 to July 18 in the City Hall at Toronto.

The type of work carried on by the members of the Electrical Estimators' Association was that of installing electric wiring and fittings in the process of building construction or elsewhere. The principal method used in the allotment of available contracts was stated to be that of averaging tenders. Only contracts amounting to over $1,000 were dealt with by the Association. Of these there were approximately sixty during the period of the alleged combine's operations, including contracts for school, library and church buildings. Before tendering, according to this system, each contractor submitted to the secretary of the Association an estimate of his cost, including material and labour. At a specially arranged meeting of the members of the Association who were interested in a particular contract these estimated costs were averaged by the secretary, and the contractor whose costs were nearest to the average was allotted the job as far as members of the Association were concerned. This contractor then added an agreed percentage to cover overhead and net profit. His tender price, which was thus made known to other contractors who were members of the Association, was designed to be the lowest tender, and the bids of the other contractors were later submitted to the architect or owner at various figures, all of them higher than that of the contractor to whom the job was allotted. The tenders of those whose estimated costs were below the average were therefore increased.

Another method used by the members of the Association was that known as "protected" jobs. This method was used in cases where one member of the Electrical Estimators' Association had special relations with

the owner of the building. In such cases, it was stated, he applied to the Association for protection and in a number of instances his request was granted. Where it was granted, according to the evidence of the members of the Association, his costs were submitted to inspection by one or more of his fellow members and the tender he was to present to the architect or owner was agreed upon. In such cases other contractors, members of the Association, who put in tenders, did so at figures above the agreed tender.

Through the above system, it was alleged, electrical contracting costs in building construction were greatly increased in some instances. It was claimed that tenders under such methods were plainly fictitious, and that the architect or owner, knowing nothing of the secret arrangement, ordinarily did not protect himself by inviting outside competition. As a result, it was stated, owners in some cases paid prices far in excess of cost plus a reasonable margin for overhead and profit, and in such lessening of competition and enhancement of prices the alleged combine had operated against the public interest and was likely to continue in this detrimental course of action.

The findings of the commissioner will be reported in a later issue of the LABOUR GAZETTE.

Court Proceedings Against Plumbing Combine

Preliminary hearings in the charges laid in Windsor against members of an alleged combine in the plumbing and heating industry in Ontario were completed on July 17 in the Police court at Windsor, Ontario. The prosecutions in these cases, which followed an investigation under the Combine Investigation Act into the Canadian Plumbing and Heating Guild, the Amalgamated Builders' Council, and other related organizations, an alleged combine of plumbing and heating contractors and others, were reported also in the June and July issues of the LABOUR GAZETTE.

Thirty-one defendants in Windsor were each charged with eight counts, four being laid under the Combines Investigation Act and four under section 498 of the Criminal Code. The charges related to the lessening of competition and enhancing of prices to the detriment of the public in connection with plumbers' or other builders' supplies or services. Seventeen of the thirty-one defendants were Windsor plumbing or sheet metal contractors. The remaining defendants in the Windsor cases were the president and vice-president of the Canadian Plumbing and Heating Guild and Amalgamated Builders' Council, the commissioner of these two organizations and a lawyer associated with the commissioner, all of Toronto; the Canadian Plumbing and Heating Guild, the Dominion Chamber of Credits, Limited, four plumbing supply companies and the managers of the Windsor offices of these four companies.

The hearings taking place in July occupied four days, from July 14 to July 17. During this period the evidence for the defence was concluded, and argument of counsel for the prosecution and the defence was submitted. At the conclusion of the hearings, the charges against the four Windsor plumbing supply houses and their local managers were dismissed by Magistrate D. M. Brodie, whose judgment in the remaining twenty-six cases is to be delivered on September 4.

Mothers' Allowances in Alberta

The twentieth and twenty-first annual reports of the Superintendent of Neglected Children of the Province of Alberta for the years 1928 and 1929, have recently been published together in one volume. In addition to the Children's Protection Act of Alberta, the Superintendent's branch administers the Mothers' Allowance Act, the Juvenile Courts Act of Alberta, the Dominion Delinquents Act, and the Children of Unmarried Parents Act, the proceedings under these acts being outlined in the present reports.

The statistics in regard to the administration of the Mothers' Allowance Act indicate that in 1928 the total number of mothers in receipt of allowance was 1,029, while in 1929 there were 1,266 mothers who received benefits. In 1929 the total amount expended in payment of allowances was $374,377, of which sum the municipalities refunded $180,065. In 1928 the payments totalled $364,604 of which amount $130,162 was refunded by the municipalities.

The number of mothers benefiting in each previous year since the Act came into operation in 1919 was as follows: 968 in 1927; 907 in 1926; 828 in 1925; 742 in 1924; 758 in 1923; 721 in 1922; 562 in 1921; 477 in 1920 and 245 in 1919.

PROPOSALS FOR DEALING WITH UNEMPLOYMENT IN NEW ZEALAND

A COMMITTEE was appointed by the Government of New Zealand in October, 1928, and reappointed in 1929 after the general election, for the purpose of considering and reporting upon the question of unemployment. This committee presented a preliminary report in August, 1929, and in January this year a second report containing its recommendations as to the proper methods of dealing with the problem of unemployment. The committee was composed of seven members, including two workers' and two employers' representatives, the Government Statistician, the Secretary of Labour, and the under-secretary for Immigration.

Summary of Recommendations

In the second report the committee summarizes its recommendations as follows:—

"In the foregoing recommendations there are three outstanding features:

"First, the treatment of unemployment as a social problem, and the consequent provisions designed to spread the responsibility for and also the cost of measures taken toward a solution of this problem as widely as possible over the whole community;

"Second, the establishment of a permanent non-governmental board of citizens as an organization with authority to deal with all matters pertaining to the relief of the unemployed and the provision of special works for their absorption (this organization to act also as an advisory body to the Government on industrial and economic questions which require from time to time to be dealt with by legislation and which inevitably affect the development of industries); and

"Third, the establishment of a fund for the purposes of the employment board to which, with very few exceptions, every citizen of the country will contribute.

"Our very definite and unanimous conclusions are—first, the problem of unemployment for its solution requires an organization of a nature different from anything which has previously been provided—in other words, the board which we recommend; second, the organization can not work without funds; third, the responsibility for providing the funds must be as widely spread as can possibly be made effective."

Causes of Unemployment

In the first report the committee discusses the conditions under which unemployment arises as follows:—

"The immediate cause of unemployment in New Zealand or elsewhere is the failure of the consumption of certain goods to keep pace with the production, or the failure of the demand for certain services to equal the supply. The underlying cause of this failure may be the high cost of the goods or services, or it may be one of several other things which we shall discuss later on. The conditions of trade which give rise to unemployment arise from no one simple cause, nor is there any one simple remedy. The problem is an exceedingly complex one, involving the life and activities of the people in many ways. Conditions of life are constantly changing; the luxuries of yesterday are the necessities of to-day, and the necessities of to-day may be obsolete to-morrow. Methods of trade and business have to be changed to meet changing conditions. There is a continuous demand for better standards of living for the mass of the people, and the satisfaction of this demand is possible only if all who are able to work are usefully employed and earning wages of high purchasing power. The purchasing-power of earnings depends upon the price of the goods and services which go to make up the standard of living. High money wages do not mean a high standard of living if prices are disproportionately high.

"There are therefore two strongly opposing forces always in operation: on the one hand a continuous demand by all workers for higher money wages (and by 'workers' we mean workers of any kind—not only those who belong to trade-unions): on the other hand a continuous demand by all workers, when converting their earnings into the goods and services they require, to obtain those goods and services at the lowest possible money prices. There is thus a constant pressure upon all who supply goods or services to find methods of reducing their costs, and so upon every worker the two opposing forces operate—the desire to obtain more money for his work, and the need to reduce the cost of what he is helping to produce. The pressure of these opposing forces tends to produce industrial troubles, economic bad times, and unemployment as surely as the pressure on opposite sides of a geological fault produces earthquakes."

Principles of Investigation

After a discussion of the special circumstances existing in New Zealand the Committee lays down the following rules to be followed in considering the problem of unemployment:—

"(1) Our principal business is the production of exportable farm products. It is a pro-

fitable business, and capable of steady expansion in volume, though prices tend to be lower in the future than in the last few years.

"(2) It follows that in primary production and incidental industries we should engage the largest possible proportion of our population and of our capital.

"(3) There will always be a proportion of the population and of capital which cannot be employed in primary production but which can be usefully employed in other industries.

"(4) The costs in both primary production and other industries must be kept low enough to permit of the expansion of our export trade.

"(5) Cost of local government and State services are just as much a factor in our costs of primary production as the costs involved in privately owned industries, and should be as carefully controlled.

"(6) Changes in industrial method and other causes will lead to the unemployment of groups of workers from time to time, and for their relief some provision must be made.

"At this point, however, we wish to emphasize three points in connection with the relief of temporary unemployment: First, any relief work provided should be useful and productive work, otherwise it is a waste of capital and of labour; second, care is needed to avoid providing permanent relief work for inefficient labour; third, the cost of necessary relief work must be spread as evenly as possible over the whole community. If it be made a tax upon industry or sections of industry it may have a boomerang effect and increase rather than diminish our problem."

Classification of Unemployment

The report divides unemployment according to the following classification:—

(1) Seasonal unemployment in the primary industries—butter and cheese making, shearing, meat-freezing, harvesting.

(2) Unemployment in other industries because of the seasonal nature of the primary industries—as, for instance, in connection with the transport and shipment of butter and cheese, wool, and meat.

(3) Unemployment arising out of the permanent replacement of manual labour by the use of tractors and other improved appliances for the loading and unloading of ships and cargo handling on wharves, the use of steam shovels and other plant in roadmaking, and the use of more effective machines generally in connection with manufacturing.

(4) Unemployment arising from the substitution of new materials—as, for instance, the use of oil in place of coal as ships' fuel, the use of electric power in place of steam, and the use of brick, concrete, and steel in place of timber in buildings.

(5) Periodic general unemployment arising from general depression of trade, as occurred particularly in 1921-22 and again in 1926-27.

(6) Unemployment arising from incapacity or from improper training.

Discussing heads (3) and (4) in the above classification observes that "unemployment is a continuing problem inevitably bound up in the development and progress of our western civilization, and that some permanent organization is required to watch developments and assist in absorbing elsewhere those temporarily displaced by new discoveries, advanced knowledge, improved mechanical and other processes, and more efficient organization in industry"

Recommendations

In its second report the committee states that any satisfactory treatment of the situation requires that industry should be so organized hat it will furnish profitable employment to all workers. If this is not done, and if, as a result, workers for whom no work is available continue to register at the employment exchanges, then support should be provided for them during their periods of unemployment. A constructive treatment of the problem demands three lines of activity:

1. The provision of employment between seasons for those workers who are regularly employed in seasonal work connected with the primary industries.

2. The provision of employment for those workers who are displaced by changes of industrial methods, increased use of labour-saving machinery and changes in the demand for commodities.

3. The provision of sustenance payments for unemployed workers willing to work and capable of working during periods when employment can not be found for them.

To carry out this program, the committee feels that two things are essential:—

Permanent Unemployment Commission.—First, a permanent body to deal with the whole subject of unemployment, and, second, a fund for the use of such a body. For the first, it is proposed that a permanent board shall be created consisting of six members appointed by the Governor-General. Two are to be appointed from nominations made by employers' organizations, and two from nominations made by workers' organizations, and two are to be selected by the Government, one of whom is to represent the taxpayers not found in either the employers' or the workers' organizations, and the other is to be chairman of the board. This body is to function continuously, and to act in an advisory and consultative capacity to the Government on all questions affecting the

welfare and development of industry. It is to be empowered to plan and co-ordinate necessary public works; to compile schedules of works suitable as relief schemes; to assist farmers in bringing deteriorated land into production with the aid of unemployed labour; to make loans, when this is desirable, for the purpose of establishing the unemployed in productive occupations or businesses under the supervision of local committees; to establish bureaus for the registration of the unemployed and for organizing employment; to undertake relief works if and when these are found necessary; and to make sustenance payments to the unemployed for whom work is not available.

Employment Fund.—These activities are to be financed by a special fund, the employment and sustenance fund, which is to be raised, in the main, by direct taxation. Unemployment, the committee insists, is a social problem, and its cost should be borne by the community as a whole, instead of by merely that part of the community immediately engaged in industry. Raising the fund by indirect taxation is not desirable, since in that case the burden is not realized and the individual taxpayer feels no personal interest in the question. It is proposed, therefore, that the fund shall be raised by a flat-rate employment tax on all workers, ranging from 12s. to 24s. annually, a penny per pound tax on individual incomes and undistributed company profits, an equivalent addition to the land tax, and a 1 per cent levy on the local general taxes. From these sources, it is calculated, about £700,000 a year would be raised. This may be insufficient to meet current expenses and to build up a reserve for times of stress, so it is proposed that one-third of the board's expenses each year shall be met by the General Government, and two-thirds by the fund.

PROGRESS OF HEALTH INSURANCE IN CANADA

THE Canadian Manufacturers' Association adopted at its recent annual convention (Labour Gazette, June, 1930, page 674) the following report on the subject of a proposed public system of health insurance for Canada.

"Your Committee finds that there is growing interest among employers in the subject of health insurance. A special commission appointed by the British Columbia Government in a recent interim report stated that an overwhelming majority of the employers of the Province, including 90 per cent of the manufacturers, are strongly in favour of the introduction of a system of state health insurance. Experience in England, Germany and the United States shows that sickness causes more lost time than all other causes put together—it is said to cause five times as much as accidents. The cost to the community both directly, by way of expenditure on hospitals and medical services, and indirectly, by way of loss of productive capacity, is estimated, for Canada, at 300 million dollars. In view of the fact that a very large proportion of this could be saved, it for the present haphazard system there were substituted a system of state health insurance contributed to by employees, employers and the state, and primarily directed not so much to relief, as to cure, and above all to prevention, of sickness, your Committee feels that the question is one which should engage the attention of all members of the Association.

It will be recalled that the Standing Committee of the House of Commons made a report on this subject at the last session of Parliament, containing the following paragraphs:

"Your Committee submits the following recommendations:—

(*a*) That with regard to sickness insurance, the Department of Pensions and National Health be requested to initiate a comprehensive survey of the field of public health, with special reference to a national health program. In this, it is believed that it would be possible to secure the co-operation of the provincial and municipal health departments, as well as the organized medical profession.

(*b*) That in the forthcoming census, provision should be made for the securing of the fullest possible data regarding the extent of unemployment and sickness, and that this should be compiled and published at as early a date as possible.

(*c*) That the Federal Government be requested to bring the subject matter of this reference before the next Federal-Provincial conference; and your Committee suggests, when the agenda for such a conference is being arranged that the provincial governments be invited to send representatives of the Employer and Employee to discuss the subject matter of this report.

The report of the British Columbia Royal Commission on State Health Insurance and Maternity Benefits, recommending the establishment of such a scheme in the Province, was outlined in the Labour Gazette, April, 1930, page 400. The views of the medical profession in the same province were stated by Dr. J. H. MacDermott in a paper outlined in the Labour Gazette, May, 1930, page 507.

The Alberta Legislature at its late session, while rejecting a proposal to consider the institution of a state system of health insurance, recommended that the provincial government, in co-operation with other provinces, should continue its studies of this subject (Labour Gazette, March, 1930, page 254).

The Legislature of the Province of Quebec, at its last session (Labour Gazette, May, 1930, page 516) passed an act providing for the establishment of a commission to study a system of social insurance.

English Health Insurance Scheme

The English system of National Health Insurance was established by the National Insurance Act of 1911, which was described in the Preamble of the Act, as "an Act to provide for insurance against loss of health and the prevention and cure of sickness and for purposes incidental thereto." The system has been modified by several subsequent Acts, the most important of which was the consolidating Act of 1924, but the modifications have for the most part dealt with matters of detail, the chief object being to simplify administration and adapt the scheme to the changed conditions due to the war. The main framework of the scheme still stands.

An exception to this statement should, perhaps, be made in regard to the Widows', Orphans' and Old Age Contributory Pensions Act, 1925, which increased the contributions paid by insured persons, and in return entitled them to old age pensions, and provided pensions for the widows and orphans of deceased insured persons. But this Act, though adding substantially to the advantages accruing to the insured population, did not modify, except in points of detail, the general scheme of administration.

The following summary of the special characteristics of the English scheme of National Health Insurance, with special reference to its medical aspects, is taken from a memorandum by Dr. G. F. McCleary, a medical officer of the English Ministry of Health, recently published by the Ministry:—

1. Insurance is on a compulsory basis, and covers practically the whole of the wage-earning population.

2. The contributions differ according to sex, but do not vary with age or with the earnings of the insured person.

3. Sickness and disablement benefits are uniform for all ages and do not vary with earnings. Sickness benefit, but not disablement benefit, differs according to sex.

4. Disablement benefit, which is the English form of an invalidity pension in respect of total incapacity for work, is a continuance of sickness benefit and forms part of the Health Insurance Scheme.

5. Unlike most English public health organizations the insurance system is not a product of gradual growth, such as, e.g., the organization for dealing with infectious disease by notification, disinfection, isolation and supervision of contacts, which began in certain local areas and gradually spread all over the country. It did not begin by the inclusion of the workers in certain industries and gradually extend to other industries. The scheme came into operation in the whole country on a certain date, and the definition of the persons insurable under the scheme has substantially remained unchanged from that date to the present time.

6. The bodies established for the administration of the cash benefits, i.e., the Approved Societies, are not organized on a local basis, and have no direct administrative relation to the insurance practitioners. Many of the largest societies have their central offices in London, but their membership extends all over the country, and an official in the London office may on the same day have to consider and decide on claims for benefit received from areas as widely removed as Northumberland and Cornwall and from claimants of whom he has no personal knowledge. Further, the claims are supported by medical certificates given by doctors who may be unknown to the society's officer dealing with the claim, and in no direct relation to him, since the certificate is issued by the doctor not to the society but to the patient. The non-localized character of the approved societies, the large scale on which some of them work, and the indirect relation of societies and practitioners combine to make it necessary that the circumstances attending the issue of medical certificates of incapacity should be clearly defined. It has accordingly been laid down that the certificates must be given on the forms prescribed by the Minister (the forms are supplied by the Insurance Committee to the Practitioners) and in accordance with rules similarly prescribed.

7. Every qualified doctor has a right to become an insurance practitioner (unless he has been removed from a medical list by the Minister), and an Insurance Committee cannot terminate the contract of an insurance practitioner with them, except by proving to the satisfaction of the Minister that his continuance as an insurance practitioner would be prejudicial to the insurance medical service.

8. The insured person has free choice of doctor, and the insurance practitioner has the right to accept any insured person up to the limit of 2,500, or such lower limit as may be fixed by local agreement.

9. Medicines and appliances are supplied by pharmacists on the doctor's prescriptions, and not by doctors, except in rural areas where pharmacists are not readily available, and in emergencies; and the insured person may take his doctor's prescriptions to any insurance pharmacist he chooses.

10. The medical profession takes an important part in the administration of the scheme.

Every Insurance Committee must have medical members; in no case can the number be less than three, and in the Committee's Medical Service Sub-Committee, the body that investigates complaints against practitioners, one-half of the membership (exclusive of the chairman) must be doctors. In every insurance area (county and county borough) there is a Local Medical Committee, recognized by the Minister as representative of the local medical profession, and also a Panel Committee representing the insurance practitioners of the area, both of which have important duties to discharge in the administration of medical benefit. In addition, a central committee of doctors, the Insurance Acts Committee, represents the collective views of insurance practitioners to the Minister on all matters relating to National Health Insurance. Although the Insurance Acts Committee is not a statutory committee, and is constituted on a purely voluntary basis, it is regarded by the Minister as representative of insurance practitioners generally, and it is consulted by him whenever he contemplates making any changes in the terms of service of insurance practitioners.

11. The medical services made available under medical benefit are limited to those that can be given by ordinary general practitioners as a class. Consultant and specialist services are not included.

12. But by the constitution of the Regional Medical Staff provision has been made for second medical opinions to be obtained in certain circumstances. The staff form a body of whole-time medical officers to whom approved societies and insurance practitioners can refer patients who have been certified as incapable of work, but in regard to whose incapacity some doubt is felt, or, in cases of admitted incapacity, when it is thought that a second medical opinion might conduce to the restoration of capacity to work. The Regional Medical Staff is an element of great importance in the English insurance scheme.

13. The insurance scheme does not include the dependants of insured persons, but under the Widows', Orphans' and Old Age Contributory Pensions Scheme, which applies to all insured persons, the widows and orphans of insured persons become eligible, under the conditions of the Pensions Scheme, for pensions.

LABOUR LEGISLATION IN NOVA SCOTIA IN 1930

A NUMBER of laws of labour interest were enacted by the Nova Scotia Legislature during its recent Session which opened on March 5 and closed on April 30, 1930. These included a Mothers' Allowances Act, and amendments to the statutes dealing with workmen's compensation, protection of children, education, woodmen's liens and public utilities.

Mothers' Allowances

The Mothers' Allowances Act provides for the payment of an allowance not exceeding $60 per month to a mother who is a widow and has two or more dependent children under the age of 16 years. The mother of one child is eligible if she is permanently disabled and incapable of earning sufficient to maintain the child, or if she has residing with her and under her care another child over 16 years of age who is incapable of supporting himself owing to mental or physical infirmity.

In all cases the Advisory Commission appointed under the Act must certify in writing to the Director of Child Welfare that the mother is a suitable person to have the custody of her children, is without adequate means of maintaining them, and that they are in her actual care and are legitimite. The Commission must also certify that the mother is a British subject and is not an Indian as defined by the Indian Act of Canada, that she was residing in Nova Scotia at the time of her husband's death and also at the time of making application for an allowance, and for three years immediately prior thereto or since her marriage; and that her husband was a resident of Nova Scotia at the time of and for at least three years immediately preceding his death. The granting of the allowance must be approved by the Director and the mother and children must continue to reside in the province.

The Act is administered by the Director of Child Welfare acting under a Minister designated by the Lieutenant-Governor in Council and assisted by an Advisory Commission of not less than three members two of whom are women. The Commissioners, who are appointed by the Lieutenant-Governor in Council, serve without salary but may be paid a *per diem* allowance for expenses. Subject to the approval of the Lieutenant-Governor in Council the Director may make regulations for the carrying out of the provisions of the Act.

The Act came into force on May 1, 1930, but allowances are not to be paid for any period prior to October 1, 1930.

Children's Protection

An amendment to the Children's Protection Act empowers the councils of cities and incorporated towns to pass by-laws or ordinances for the regulation and control of children engaged as express or dispatch messengers, and vendors of newspapers and smallwares. Such ordinances or by-laws must, however, be approved by the Lieutenant-Governor in Council before having the force of law. The Children's Protection Act defines a "child" as "a boy or girl actually or apparently under the age of 16 years."

Workmen's Compensation

An amendment to the Workmen's Compensation Act removes the industry of dredging from Part I and places it under Part III of the Act. "Dredging" is defined to include the operation of dredges, tugs, scows, and any and all craft usually employed or intended to be employed in the conduct of said industry, or in or about any work incidental thereto. Part III of the Act, which hitherto applied only to the fishing industry, provides for compensation to be paid on the same scale and in like manner and under like circumstances as under Part I, but does not include burial expenses, medical aid, artificial appliances, the right to rehabilitation or any benefit excepting the compensation payments. The employer must secure the payments by insuring and keeping insured to the extent of his liability with some reliable insurance carrier or underwriter who is liable equally with the employer for the payment of compensation. Liability in the case of an accident to all or any members of the crew of a vessel, dredge, etc., is limited to $50,000 exclusive of costs and expenses. The judge of the county court of the district in which the employer resides has authority to decide all questions that may arise between a claimant and the employer or insurance company and his decision is final and without appeal. The judge is vested with the same powers as are conferred on the Workmen's Compensation Board by Part I (except where these are at variance with the provisions of Part III) and during a period of temporary disability may review a case as often as may be necessary. The provisions of Part III of the Act were fully described in the LABOUR GAZETTE for September, 1928, page 962.

Woodmen's Liens

The Woodmen's Lien Act was amended to provide for the filing of statements of claim within 60 days after the last day on which labour or services or some part thereof were performed. Formerly statements were to be filed within 30 days.

Shares in Public Utilities

An amendment to the Public Utilities Act authorizes an issue of shares (not exceeding 5 per cent in number of the shares previously issued) in any calendar year, without offering such issue to the shareholders, provided they are issued for certain purposes among which is the provision of shares to be sold for cash to employees or to or for an employees' benefit fund.

Education

A number of changes were made in the provisions of the Education Act which deal with school grants. A school section providing a department for the teaching of mechanic science or domestic science with adequate equipment for at least twelve pupils, and employing a teacher or teachers duly licensed by the Council of Public Instruction, and causing instruction in mechanic science to be given for a session of two hours per week, receives an annual grant not exceeding $250 for each teacher so employed, with an additional payment of 15 cents for every two hours lesson to each pupil. The total amount may not exceed $500 in any school year in sections where one teacher is employed, or $1,000 where there are two or more teachers. Where the trustees or commissioners of a school section in which, previous to July 31, 1930, no instruction was given in mechanic or domestic science, establish a department for the giving of such instruction with adequate equipment, a sum equal to half the cost of such equipment, but not exceeding $500, may be paid.

A Bill to provide for holidays with pay was submitted to the Grand Council recently by the Council of State of the Swiss Canton of Bâle Ville. The measure seeks to enact that any person who works without interruption for the same employer shall be entitled to an annual holiday of six days after one year of service and of twelve days after ten years. Apprentices and young persons under 18 shall be entitled to a holiday of twelve days every year. The Bill does not apply to Federal public servants, or to workers whose conditions of labour are governed by the Federal Factory Act.

MALE MINIMUM WAGE ACT OF BRITISH COLUMBIA

Order Respecting Licentiates of Pharmacy

THE Male Minimum Wage Board of British Columbia issued an order, dated July 31, 1930, fixing a minimum wage of 80 cents an hour for licentiates of pharmacy. It will be recalled that the application of the drug store employees was at first refused by the Board, which ruled that these employees belonged to the professional class, and were therefore not subject to the provisions of the Male Minimum Wage Act. The British Columbia Court of Appeal subsequently set aside this ruling, finding that drug store employees belonged to an "occupation" within the meaning of the Act. This decision was outlined in the Labour Gazette, June, 1930, page 730. The text of the new order is as follows:

Pursuant to the provisions of the "Male Minimum Wage Act," chapter 43 of the Statutes of British Columbia, 1929, the Male Minimum Wage Board constituted under that Act, having made due inquiry into the circumstances surrounding the employment of employees in the occupation hereinafter mentioned, hereby orders:

1. In this Order the expression, "licentiate of pharmacy" means a person who is the holder of a certificate as a licentiate of pharmacy issued to him under the provisions of the "Pharmacy Act."

2. This Order shall apply to every employee within the meaning of the "Male Minimum Wage Act" who is engaged in the occupation of a licentiate of pharmacy in the selling, dispensing or compounding of poisons, drugs, medicines, of chemicals, or in the dispensing of prescriptions of medical practitioners, whether in a drug-store dispensary, pharmacy, laboratory, office, or elsewhere and whether by retail or wholesale.

3. Subject to the provisions of section 6 of the "Male Minimum Wage Act," the minimum wage to be paid to every employee to whom this Order applies shall be eighty cents an hour.

Dated at Victoria, B.C., this 31st day of July, 1930.

Male Minimum Wage Board,
J. D. McNiven,
Chairman.
Adam Bell,
Member.

Regulations of Saskatchewan Workmen's Compensation Board

An additional Regulation under the Workmen's Compensation Act of Saskatchewan, was published in the *Saskatchewan Gazette,* July 12, 1930. Earlier regulations were outlined in the Labour Gazette, July, 1930, page 765; April, 1930, page 392. The new regulation is as follows:—

Regulation (a19).

"The application of the Act to the wholesale distribution of gazoline, oils, greases and other petroleum products is except as otherwise dealt within the regulations of the Board limited to those Companies, Partnerships and Individuals who are distributors of such products and who obtain such goods directly from producers within the Province or are direct importers of such products and is further limited in its application to such distributors as above defined to those employees who are employed exclusively in connection with such distribution and are not engaged in any other employment and who are employed on stated and agreed wages or salaries and the employment by such distributors of commission men or commission agents and the employment of others by such commission men or commission agents and all the operations in the distribution of such products except by distributors as herein defined and limited are wholly excluded from the operation of the Act."

Causes of Industrial Accidents in New York

The New York State Department of Labour, in Special Bulletin No. 164, analyses the chief causes of industrial accidents as recorded in the State during the three years ending June 30, 1929.

Accidents are considered under nine main classifications, and in all but two of these classes, the total number of accidents increased during the three years of the study. About 35 per cent of the compensated accidents during the three years were due to handling objects and tools. This was also the chief cause of injury in each of the industries considered: manufacturing, construction, transportation and public utilities, service, trade, "other industries."

Mechanical apparatus was the next most important cause of accidents, though it was responsible for only 15 per cent of the total number. Falls to a different level and falls on the same level were each responsible for about 9 per cent of the accidents. The analysis brings out the importance of the different causes of accidents in the individual industries. Thus falls to a different level, which caused only 9 per cent of the total accidents, were responsible for 15 per cent of the construction accidents. Falling objects, which caused 6 per cent of the total accidents, caused 11·5 per cent of the accidents in construction.

REPORT OF THE COMMISSIONER OF LABOUR OF ALBERTA 1929-30

THE Commissioner of Labour of the Province of Alberta, in his annual report submitted to the Provincial Legislature at its recent session, reviews the activities of the Bureau of Labour during the fiscal year ending March 31, 1930. The report also contains an account of the proceedings under the Labour Disputes Act during 1929. In addition to statistics of trades and industries, the publication of which are entrusted to the Bureau under the Bureau of Labour Act of 1922, the Bureau also conducts the provincial Employment Offices and administers the Factories Act, the Minimum Wage, the Boilers Act, and the Theatres Act.

Trades and Industries

The report indicates an expansion of business during the first half of the year, but a marked decline during the latter half. Returns from 2,468 firms covered 49,464 male employees over eighteen, 1,020 males under eighteen, 7,853 females over eighteen, 467 females under eighteen and 703 apprentices. Total payments for wages and salaries were $85,317,134.78, of which sum $75,324,757.14 was paid to wage earners. The returns, when considered as to employment by months for males, do not show as great a difference as the previous year. March was the month of least employment, when 43,591 were employed, and July the month of greatest, when 51,502 were employed. Heavy declines followed the peak month, and during December the total employed was 45,276. It is pointed out that "as in previous years the returns, when considered by individual industries, show great fluctuations, and when this is considered with the grouped totals it is apparent that for the unskilled work in the various industries men interchange from one to the other, thereby maintaining a better general balance."

The returns of female monthly employment show an increase in the number employed throughout the year. January was the month of least employment, when 6,616 were employed. Following this there was a fairly steady increase, with December the month of greatest employment, when 8,291 were employed.

The accompanying tables based on returns from 2,468 firms, give in detail the industrial returns:

STATISTICAL TABLE OF TRADES AND INDUSTRIES

PAY ROLLS

Superintendents, officers and managers	$ 9,992,357 64
Clerks, stenographers and bookkeepers, etc	10,990,581 91
Wage-earners (including piece-workers, salesmen, etc)	64,334,195 23
Total	$85,317,134 78

CLASSIFIED WEEKLY WAGE RATES (WAGE-EARNERS ONLY)

Total	49,464	1,020	7,853	467	703

Factories Act

The report states that the policy of using all inspectors appointed within the Bureau of Labour for general inspections under the Factories Act and Minimum Wage Act was continued. The returns from inspectors indicate further increases in business activities. New industries were established and a number of existing industries increased staffs. The increase in male employees was 1,788, or 7 per cent, and in female employees 986, or 10 per cent. Under the provisions of The Factories Act 4,561 inspections were made of 4,284 factories, shops, hotels, offices and office buildings in which were employed 27,867 males and 9,348 females.

Recommendations relative to safety, sanitation, hours and wages and the employment of children to the number of 1,460 were made, all of which were fully carried out by employers. In connection with his activities the chief inspector stated: "An endeavour was made to have inspectors pay at least one visit to all establishments within the scope of the Act. The expansion of business generally and the inclusion of elevators, hotels and oil well drilling operations has increased the number of places to be visited to such an extent that this is not possible with our present staff. We also made 599 inspections of 583 elevators in connection with which 193 safety recommendations were made. Of the elevators inspected 166 were passenger, 398 freight, 16 Humphrey and 3 escalators. This phase of our safety work is becoming more important each year. New types of elevators are being installed and the older types are being changed."

Minimum Wage Act

Under the provisions of The Minimum Wage Act, 3,228 inspections were made of 2,890 businesses, in which were employed 9,310 experienced females and 750 learners. These involved 200 orders for adjustments of wages, 53 for adjustments of hours and 99 for adjustment of staff (so that not more than 25 per cent would be in receipt of apprentice wages.) The total increase under all orders was 1,212 or 14 per cent.

Inspectors found a number of females in receipt of wages less than the minimum rate and a number who were working longer hours than the maximum fixed by the board. All wages and hours were adjusted by employers when the infractions were brought to their attention by the inspector.

Six court cases were taken against employers for failing to pay minimum wages. Five convictions were obtained and employers were ordered to pay back wages; one case was dismissed, the employer having made the necessary adjustments after information was laid.

A number of permits were issued for overtime to be worked to take care of emergencies that had arisen. The number of employees coming under each of the seven orders of the Board were as follows:—

—	Experienced	Apprentices
Order No. 1— Manufacturing	1,082	138
Order No. 2— Laundries, dyeing and cleaning	405	93
Order No. 3— Hotels and Restaurants	1,331	67
Order No. 4— Personal service	252	20
Order No. 5— Office occupation	3,743	173
Order No. 6— Retail establishments	2,335	219
Order No. 7— Fruit and vegetable canning	162	40
Total	9,310	750

Boiler Inspection

According to the report of the chief boiler inspector there was a steady increase in the number of pressure vessels placed in service together with other machinery and equipment during the year. The various boiler accidents which occured during the year were outlined. No serious personal injury was reported as due to the failure of a pressure vessel or machinery governed under the Act. Summary tables are furnished in the report, showing the inspections undertaken by the staff during the year. Referring to the examination of candidates for engineering certificates, it was stated that a majority of the most successful candidates for first, second and third class certificates are those who availed themselves of the engineering courses arranged by the Provincial Institute of Technology and Art, at Calgary. A table showing the number and class of certificates issued to the successful candidates resulting from examinations undertaken by the staff is also included in the report.

Employment Offices

An account is given of the work of the Alberta Government Employment Offices during the year. Industry generally throughout the province was reported active during the first few months, a marked increase being shown in building construction. Development slackened with the advent of the severe drought which extended over large areas of the province. This was reflected in the work of the employment offices, and the number

of vacancies filled dropped from 72,924 in the previous year to 52,100 in the current year. The director points out that owing to an Order in Council passed by the Federal Government in August, 1929, restricting the admission of contract labour in Canada, the employment offices are now consulted before permission is granted foreign workers to enter the Dominion. Charts and tables are given which show the business transacted by the Employment Service for the period under review, by occupations, months and offices.

Theatre Inspection

This section of the report refers to the considerable increase in the number of halls inspected, machines examined and certificates issued. The increase in certificates issued was attributed to the additional installations of sound picture equipment and the need of two projectionists during the time the theatre is open to the public. The cost of permanent sound installation was stated to be prohibitive in rural districts, which had the effect of centralizing the picture industry in cities and larger towns.

MINING IN ALBERTA IN 1929

Annual Report of the Mines Branch of the Province

The annual report of the chief inspector of mines of Alberta reviews the activities of the mining industry in the province during the calendar year 1929. The report chiefly consists of tables, giving statistics of coal production; number of workmen employed in each mine; annual consumption of coal in the Dominion; the number of accidents, fatal, serious and slight; the number and nature of the prosecutions under the Mines Act, the certificates issued, etc.

Production in 1929.—There were produced during the year a total of 7,147,250 tons of coal with a value of $22,491,061. Of this output, 1,446,555 tons were sold for consumption in the Province of Alberta, 2,336,068 tons in other provinces in Canada, 51,625 tons for consumption in the United States, 2,923,827 tons were sold to railroad companies, 26,180 tons were used in making briquettes, 243,647 tons were used under colliery boilers, 7,315 tons were used by colliery locomotives, 58,991 tons were put to stock, and 111,145 tons were put on the waste heap. In addition to the coal mined, there were 77,197 tons of shale mined, from which 26,077,733 bricks were manufactured. It was stated that while there was a reduction in output from that produced in 1928, it was the second largest output that has been produced in the province.

There were in operation during the year, 1 shale mine and 2 open pits producing shale for brick-making; also 300 coal mines. Of the latter, 28 were opened, 25 re-opened and 18 abandoned. In addition to the mines abandoned there were 37 closed temporarily, leaving 248 mines in operation at December 31, 1929.

The production of domestic coal amounted to 3,385,749 tons; sub-bituminous, totalled 668,108 tons; and bituminous coal 3,093,393 tons. No anthracite coal has been produced in Alberta since 1923. During the year 1929, 55,335 tons of Alberta coal was disposed of in the Province of Ontario as compared with 44,265 tons in the previous year.

Per Capita Production.—The number of tons mined per man underground since the year 1919 was as follows:

1919	958
1920	1,055
1921	824
1922	971
1923	893
1924	982
1925	834
1926	991
1927	970
1928	1,107
1929	1,004

Number of employees.—The total number employed in all the coal fields as at December 31, 1929, was 11,520, which is an increase of 47 over the corresponding month in the previous year. There were 8,815 employed under ground and 2,705 above ground. Of these totals, domestic fields provided employment for 5,718 below ground and 1,381 above ground; sub-bituminous coal mines for 580 under ground and 374 above ground; and bituminous mines for 2,517 under ground and 950 above ground.

Prosecutions.—There were 43 prosecutions instituted for contraventions of the provisions of The Mines Act, all of which were successful.

Accidents.—There were 31 fatal accidents during the year, in addition to which there occurred 69 accidents classed as "serious" and 98 as "slight." In 1928, the corresponding accident totals were 28, 71, and 122. The number of tons of coal mined per fatal accident was 230,556; per serious accident

103,583 tons; per slight accident 72,931 tons. Of the accident total, 28 of the 31 fatal accidents; 63 of the 69 serious accidents; and 85 of the 98 slight accidents occurred below ground. The greatest factor in the causation of accidents was haulage which accounted for a total of 56 accidents of all classes both above and below ground. Falls of rock was listed second in causing 37 accidents, and shot firing 23.

Safety Measures.—The report states that in addition to regular inspections of the mines, samples of mine air have been taken at intervals by the inspectors from mines in the bituminous areas in addition to tests made by Burrell gas detectors. These samples were forwarded to the Chemistry Branch of the Department of Mines, Ottawa, for analysis. In all bituminous mines that are dry and dusty, rock-dusting with crushed limestone has been continuously carried on. Samples of rock dust used have been collected and forwarded to the Provincial Analyst and tested for silica content.

Examinations for certificates of competency as coal miners have been conducted by the inspectors at various centres throughout the province, there having been 1,373 certificates issued during the year, making a total of 11,319 certificates issued to December 31, 1929.

The report states that the use of purchased electric power by the mines in the province is still increasing, there having been 23,510,-529 k.w. hours purchased as against 22,416,009 in 1928.

Coal Mining in Canada in 1929

Canada's coal output of 17,496,557 tons in 1929 was within 0·4 per cent of the record production of 1928 and exceeded the average for the past five years by 11·8 per cent, according to finally revised statistics recently issued by the Dominion Bureau of Statistics. An increase of 4·6 per cent was recorded in Nova Scotia, 5·3 per cent in New Brunswick, and 23 per cent in Saskatchewan. Alberta's production was 2·5 per cent lower than the high mark for the province of 7,336,330 tons which was set up in 1928. British Columbia's output of 2,490,378 tons showed a decrease of 11·2 per cent.

The completion of the carbonizing and briquetting plant in Saskatchewan and the commencement of commercial operations at this plant was an important development in the coal industry in 1929. Another feature of the industry in that year was a continuance of investigational and development work in connection with the Ontario lignite deposits. Some test shipments were made from these deposits during the year. It is pointed out that Nova Scotia, New Brunswick, British Columbia, and the Yukon produce only bituminous coal; Saskatchewan mines yield lignite only; and Alberta produces bituminous, sub-bituminous and lignite.

Railroads in Canada consumed 5·2 million tons of Canadian coal in 1929; this tonnage represented 32·9 per cent of the total shipments from the mines. Quebec provided the largest market for Canadian coal during 1929; exclusive of coal for the use of railroads, 2,372,541 tons of Canadian coal were shipped to Quebec points.

Exports of Canadian coal in 1929 amounted to 842,972 tons, a decrease of 2·43 per cent from the 1928 total of 863,941 tons. Coal cleared through Nova Scotia and British Columbia ports accounted for 96 per cent of the Canadian exports. The United States and Newfoundland provided the principal markets for Canada's external shipments of coal.

The imports of anthracite, bituminous and lignite coal into Canada in 1929 were recorded at 18,619,300 tons, as compared with 17,714,296 tons in the preceding year. Receipts from Great Britain consisted of 729,458 tons of anthracite and 115,368 tons of bituminous, making a total of 844,826 tons, an increase of 25·98 per cent over the 1928 imports of 670,612 tons. The principal supply of coal imported into Canada came from the United States; this tonnage was made up of 14,469,831 tons of bituminous, 3,173,043 tons of anthracite, and 14,108 tons of lignite. Shipments of anthracite coal from Russia to Canadian points commenced in December, 1928, and during the calendar year 1929 the tonnage received assumed important proportions amounting to 117,304 tons. Small quantities of coal were also received from Newfoundland and Japan.

The coal mining industry furnished employment to 29,739 employees during 1929. It is stated that in eastern Canada steady employment was afforded the 13,929 men working in or about the coal mines; in western Canada the usual summer seasonal decline was apparent. Salaries and wages paid in this industry amounted to $42,376,378 as against $43,320,811 in 1928. There were 28,227 wage-earners working in the coal mines of Canada in 1929; of these 6,323 worked on the surface and 21,904 underground. An average of 275

man-days work was furnished surface men while underground men worked 246 days.

Records for the industry show 7,117,692 man-days work done during the year and from this total it has been computed that the average daily earning power per man was $5.49. Calculated on the same basis, the average in 1928 was $5.57 and in 1927 it was $5.03.

Capital employed by the companies operating in the coal mining industry in Canada in 1929 was $141,766,727. The value of fuel used in the operation of Canadian coal mines in 1929 was $3,087,105, and consisted principally of bituminous, sub-bituminous and lignite coal, although small quantities of gasoline, kerosene and wood were also used. Electricity purchased amounted to 40,326,458 k.w.h. valued at $570,250, in addition to which 108,944,704 k.w.h. were generated by the operating companies for their own use. A further quantity of 6,554,222 k.w.h. was produced and sold for use apart from coal mining operations.

TRADE UNIONISM IN CANADA

Résumé of the Nineteenth Annual Report on Labour Organization

THE Nineteenth Annual Report on Labour Organization in Canada, being for the calendar year 1929, which has just been issued by the Department of Labour, states that the trade union movement of the Dominion is made up of the following classes:—

(1) Local branches of international craft organizations, having headquarters in the United States;

(2) The One Big Union, an international industrial union, with headquarters in Winnipeg;

(3) Local branches of the Industrial Workers of the World, a revolutionary industrial union which seeks to abolish the wage system, with headquarters in Chicago;

(4) Canadian central labour organizations;

(5) Independent trade union units, and

(6) National Catholic unions.

The international craft union group consists of the Canadian members of 85 organizations, two more than in 1928, and has 1,953 branches in the Dominion, a gain of 80, with a combined membership of 203,514, an increase of 16,597. The One Big Union reported 43 local units in Canada, a loss of 3, with a membership of 22,890, an increase of 2,861. The Industrial Workers of the World claims 6 branches in the Dominion, a loss of 1, with 3,975 members, a decrease of 425. The group of Canadian central organizations, numbering 25, a loss of 2, comprises 639 branches, a gain of 53, with a combined membership of 53,277, an increase of 1,419. The independent units number 31, a loss of 5, the combined membership of which is 10,820, a decrease of 578. The National Catholic group of unions number 106, a gain of one, their combined membership being reported at 25,000, a decrease of 1,000. The net increase in branches for 1929 was 125, and the gain in membership was 18,874, making a grand total of 2,778 branches of all classes of unions in Canada, with a combined reported and estimated membership of 319,476, which figures, according to the latest estimate of population, indicate that trade unionists represent 3·26 per cent of the people in the Dominion; adding 103,811, the number of members comprising the non-trade union associations, organized wage-earners at the close of 1929 represented 4·32 per cent of the population.

The accompanying chart, which is taken from the report, indicates the fluctuations in the number of trade unionists in Canada from 1911 to 1929, the period covered by these annual reports on labour organization.

Another chart published in the report shows that the 319,476 trade union members in the Dominion are divided by trade groups as follows:—

Railroad employees, 98,736 members, or 30·91 per cent of the total;

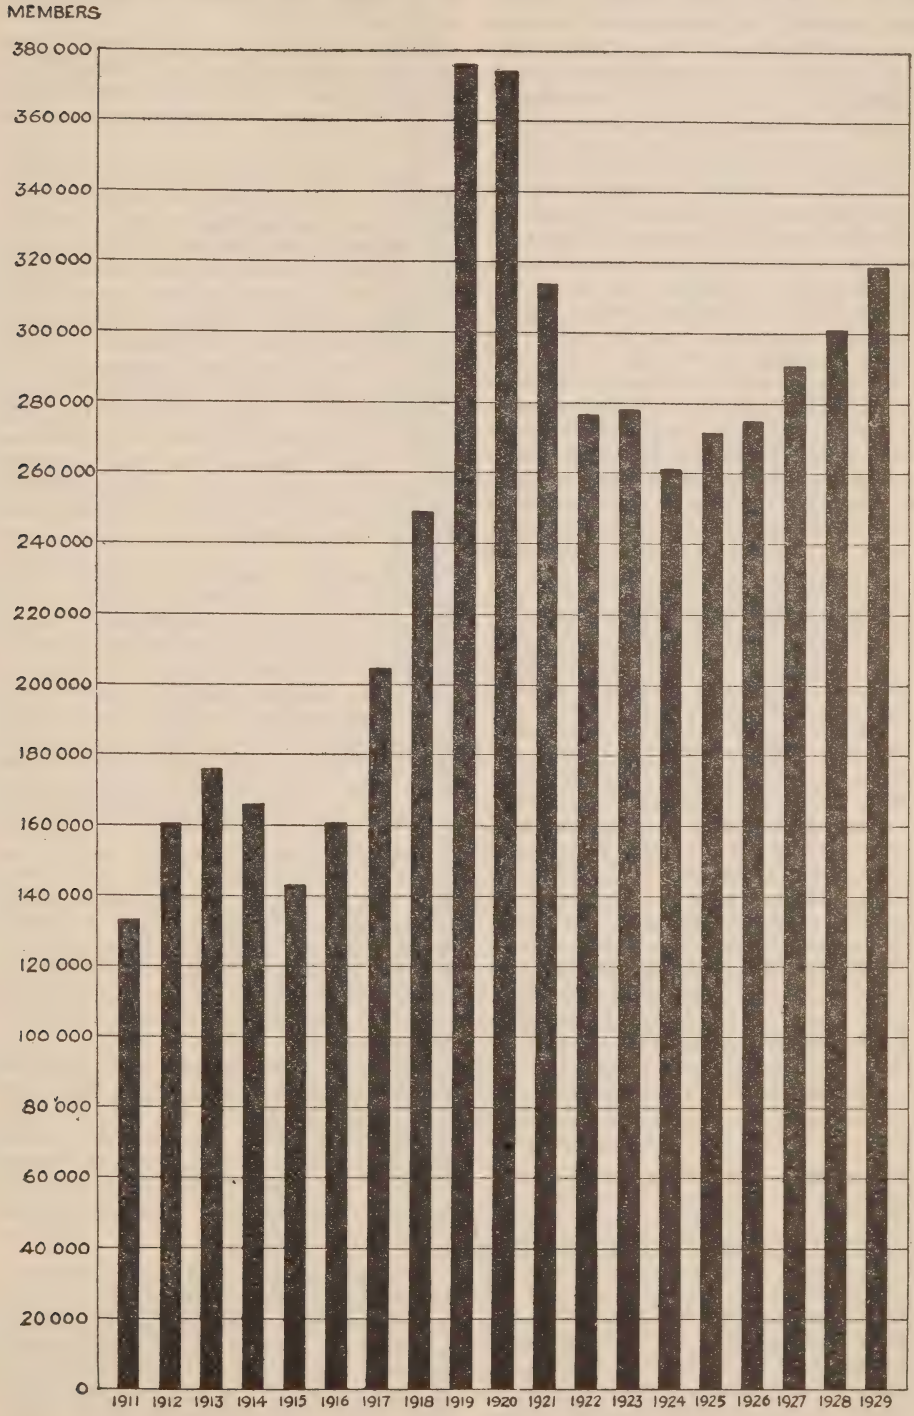
Building trades, 38,130, or 11·94 per cent;

Public employees, personal service and amusement trades, 32,786 members, or 10·26 per cent;

Mining and quarrying, 29,003 members, or 9·08 per cent;

Other transportation and navigation trades, 26,815 members, or 8·39 per cent;

Metal trades, 18,791 members, or 5·88 per cent;



Clothing, boots and shoes, 16,076 members, or 5·03 per cent;

Printing and paper making trades, 14,576 members, or 4·56 per cent;

All other trades and general labour, 44,563 members, or 13·95 per cent.

The report points out that the railroad employees' group contains a large number of metal trades workers who are not employed in railroad shop work, and who should be included in the metal trades group, but it was impossible to secure separate figures.

NINETEEN YEARS OF TRADE UNIONISM IN CANADA

Trade Union Membership by Provinces.—The division by provinces of the 2,778 local branch unions of all classes is as follows: Ontario, 1,055; Quebec, 504; Alberta, 279; British Columbia, 271; Saskatchewan, 212; Manitoba, 185; Nova Scotia, 141; New Brunswick, 119; and Prince Edward Island, 11.

Trade Union Membership in Canadian Cities.—Thirty-five cities in Canada have not less than 20 local branch unions. They represent approximately 60 per cent of the total number of branches in the Dominion, and contain about 52 per cent of the total trade union membership. Montreal stands first in the list of these cities, and (including the national Catholic unions) has 200 local branches of all classes of unions, 147 of which reported 41,389 members; Toronto ranks second with 147 branches, 105 of which reported 27,512 members; Winnipeg comes third with 109 branches, 71 of which reported 12,510 members; Vancouver being fourth with 103 branches, 83 of which reported 14,371 members. The remaining 31 cities in order of number of branches are as follows:—Calgary, 74 branches, 55 reporting 6,181 members; Edmonton, 69 branches, 59 reporting 5,544 members; Quebec, 69 branches, 42 reporting 4,689 members; Hamilton, 63 branches, 54 reporting 5,306 members; Ottawa, 62 branches, 48 reporting 4,253 members; London, 59 branches, 43 reporting 4,052 members; Victoria, 47 branches, 40 reporting 2,503 members; Halifax, 43 branches, 32 reporting 3,842 members; Saint John, 43 branches, 34 reporting 2,633 members; Regina, 43 branches, 37 reporting 2,218 members; Saskatoon, 41 branches, 34 reporting 2,195 members; Windsor, 40 branches, 35 reporting 2,617 members; Moose Jaw, 34 branches, 26 reporting 1,828 members; Fort William, 31 branches, 27 reporting 1,991 members; St. Thomas, 29 branches, 26 reporting 1,994 members; Lethbridge, 27 branches, 25 reporting 1,860 members; Port Arthur, 27 branches, 17 reporting 1,237 members; Sherbrooke, 27 branches, 16 reporting 838 members; Brandon, 26 branches, 20 reporting 1,142 members; North Bay, 25 branches, 23 reporting 1,811 members; Moncton, 24 branches, 22 reporting 3,155 members; Brantford, 22 branches, 20 reporting 929 members; Guelph, 22 branches, 18 reporting 496 members; Stratford, 21 branches, 20 reporting 1,773 members; St. Catharines, 21 branches, 15 reporting 553 members; Kitchener, 21 branches, 18 reporting 454 members; Three Rivers, 20 branches, 14 reporting 1,533 members; Hull, 20 branches, 17 reporting 1,148 members; Sault Ste. Marie, 20 branches, 18 reporting 953 members; Kingston, 20 branches, 13 reporting 611 members; Peterborough, 20 branches, 18 reporting 430 members.

Of the 2,117 branch unions which reported their membership 23 have over 1,000 members, six more than in 1928, the reporting branch with the largest membership having 3,785 members.

Trades and Labour Congress of Canada.—This body was originally established in 1873, and is the recognized head of the internationally organized wage-earners in the Dominion. The American Federation of Labour and 58 of its more important affiliates have affiliated the whole of their Canadian membership by paying to the congress the regular *per capita* tax. A number of local branches of international organizations which had affiliated individually also paid *per capita* tax. The congress has under direct charters three Canadian central organizations, two provincial federations of labour, 39 trades and labour councils, and 45 local unions, the total membership being 162,633.

All-Canadian Congress of Labour.—This congress, which was formed in March, 1927, absorbed the Canadian Federation of Labour, and was organized in direct opposition to the old-established Trades Congress. The affiliates of the All-Canadian body number eleven central organizations, including the Canadian Brotherhood of Railway Employees and the One Big Union, together with 22 directly chartered local unions and nine labour councils, the whole membership numbering 52,932.

National Catholic Unions.—A chapter is devoted to the National Catholic unions, which so far as Canada is concerned had their inception in 1902 in the province of Quebec, where, with the exception of one union in Ontario, all of such bodies are located. The number of national Catholic unions is 106, with a combined reported membership of 25,000.

The report makes extended reference to the various classes of delegate bodies which have been formed as part of the plan of labour organization in North America with a view to co-ordinating the activities of unions of closely allied or particular trades in dealing with matters of like concern to all members of the bodies represented.

Organized Workers in Various Countries.—In addition to the figures published in the report showing the membership of labour organizations in Canada and the United States information is included giving the standing of organized workers in 62 other countries, the grand total for the 64 countries being 45,903,-

048. The following are the figures for the countries enumerated, as extracted from the report:—

Argentine	164,874
Australia	911,652
Austria	999,137
Belgium	762,886
Bolivia	5,000
Brazil	116,500
British Guiana	1,073
Bulgaria	2,485
Canada	319,476
Ceylon	114,000
Chili	204,000
China	2,800,000
Colombia	11,400
Corea	123,000
Cuba	250,000
Czechoslovakia	1,733,979
Denmark	296,830
Dominica	3,442
Dutch East Indies	24,021
Egypt	60,000
Esthonia	13,336
Finland	75,846
France	1,218,250
Germany	8,217,923
Great Britain	4,908,000
Greece	98,470
Guatemala	3,000
Holland	561,037
Honduras	6,000
Hungary	135,678
Iceland	4,540
India	300,000
Ireland	111,921
Italy	2,768,730
Japan	316,906
Latvia	37,888
Lithuania	18,486
Luxemburg	15,317
Memel Territory	1,024
Mexico	1,800,000
Mongolia	5,000
New Zealand	55,800
Nicaragua	6,000
Norway	106,182
Palestine	21,873
Panama	3,000
Paraguay	8,000
Peru	25,000
Philippines	67,000
Poland	577,581
Porto Rico	18,000
Portugal	40,000
Roumania	46,631
Russia	10,248,000
Salvador	10,000
South Africa	82,660
South West Africa	600
Spain	262,000
Sweden	508,107
Switzerland	265,562
Uruguay	28,484
Venezuela	25,972
United States	3,917,772
Yugoslavia	57,717

Revolutionary Labour Organizations.—The report makes reference to the various communist organizations, chief of which is the revolutionary political body known as the Third (Communist) International, which was established in Moscow on March 6, 1919, with the object of organizing the working class for the overthrow of capitalism, the destruction of the bourgeois state and the establishment of the dictatorship of the proletariat. The theses of the Communist International declare that the trade unions represent the most important form of mass organization of the proletariat, and with a view to having a medium through which to propagate the communist doctrine among the organized workers, the Moscow organization in July, 1921, set up the Red International of Labour Unions, the official representative of which in America is the Trade Union Unity League, originally known as the Trade Union Educational League. The Canadian representative of the Communist International is the Communist Party of Canada, which was established on February 17, 1922, with head office in Toronto. An adjunct of the Communist Party is the Young Communist League, formed in July, 1922, which with its children's section, known as the Young Pioneers, declares its mission to be to penetrate the mass of working class youth by means of communist agitation and education.

International Federation of Trade Unions.—The report makes reference to the International Federation of Trade Unions, a body established in 1901 and reorganized in 1919, with the object among others of uniting the international working class and the promotion of the interests and activities of the trade union movement. The labour movement of the Dominion as represented by the Trades and Labour Congress of Canada is affiliated with the federation, and the president of the congress is a member of the General Council. The I.F.T.U. has in affiliation the trade union centres of 27 countries, with a combined membership of 13,579,159, as well as a similar number of international trade secretariats. The report points that the Red International of Labour Unions, which, it has been stated, was formed for the purpose of destroying the International Federation, had attacked the last named body, declaring that it was incapable of uniting the working classes of the world and was only an appendage of the International Labour Office.

Industrial Workers of the World.—Mention is made of the Industrial Workers of the World, usually referred to as the I.W.W., a body which declares itself to be an advocate of what is termed revolutionary industrial unionism, with its objective the abolition of the wage system. At its inception the organization claimed to have a strong following, but dissension arose in the ranks, and with the prosecution in 1918 of a large number of its

members by the United States Government on the charge of interfering with the wartime measures of the Republic, the following of the I.W.W. has gradually decreased. In 1905, the year the organization was formed, the membership was reported at 400,000. At the close of 1929 the membership was given at 26,325, of which 3,975 members belonged to the six Canadian branches.

Labour in Politics.—The report refers to the declaration of the Trades and Labour Congress of Canada in 1887 for independent political action on the part of organized labour, it being contended that "the working classes of the Dominion will never be properly represented in Parliament or receive justice in the legislation of the country until they were represented by men of their own class." Although a number of labour candidates were subsequently elected to various offices in some of the industrial districts, it was not until 1921 that the Canadian Labour Party was formed. A number of provincial sections were established, and under their auspices candidates were nominated for office, in some instances being elected. In 1927, the secretary of the party since its inception resigned, following the removal of his name by the Toronto central council of the C.L.P. (which it was alleged was dominated by communists) from the party nomination for controller in the Toronto municipal election. Since the secretary's retirement the main party has ceased to function, the British Columbia section has dissolved, and the Nova Scotia and Ontario sections failed to meet during 1929, leaving only two provincial sections—Quebec and Alberta—in existence. British Columbia, Manitoba and Ontario have independent labour parties, that in the last named province having been formed by delegates to the 1927 convention of the Ontario section of the C.L.P., who objected to the passage of a number of revolutionary resolutions. In some of the other provinces there are labour political organizations operating under different names, the activities of some of which are confined to the principal cities, and in all of which except the section of the C.L.P. individual membership is accepted. In the Ontario provincial election of October 30, 1929, there were three candidates designated as labour nominees, and of these one was elected. Four Communist Party candidates who contested seats were all defeated. There was formed in Regina, Saskatchewan, on October 26-27, 1929, the Western Conference of Labour Political Parties, embracing the four western provinces, for the purpose of unifying the activities of the affiliated parties, to arrange common action and to bring about the entire unification of the labour and socialist movement throughout Western Canada. In 23 localities 89 candidates were selected or endorsed by labour political parties or organized labour bodies for municipal office. Of these 32 were elected to the following offices: mayor, 1; controllers, 2; aldermen or councillors, 21; school trustees, 8. Six communist candidates who presented themselves were defeated.

Trade Union Benefits.—A chapter of the report deals with the beneficiary features of labour organizations, indicating that of the 25 Canadian central bodies eleven had made payments for benefits, the total amount expended being $54,214, an increase of $18,870 as compared with 1928. Of the 87 international organizations operating in the Dominion 67 reported having expended $27,888,892 for benefits, an increase of $3,091,524. The disbursements in 1929 for the various classes of benefits were:—

Death benefits	$17,438,077
Unemployed and travelling benefits	1,321,983
Strike benefits	1,329,257
Sick and accident benefits	2,292,022
Old age pensions and other benefits	5,507,553

In addition to the expenditures made by the headquarters of the international organizations the report gives information showing that 650 of the local branch unions in Canada made benefit payments to their own members from their own funds, as did also 108 branches of Canadian bodies, 12 independent units and 25 national Catholic unions, the total disbursements being $445,627, an increase of $39,586 over the expenditures for the same purpose in 1928. The outlay for 1929 by the local branches for the classes of benefits named was:

Death benefits	$165,382
Unemployed benefits	27,753
Strike benefits	37,413
Sick and accident benefits	150,197
Other benefits	64,982

Non-trade Union Associations.—Besides the labour organizations whose names appear in the report space has been given to a class of associations which, though not connected with the trade union movement, are for the most part composed of wage-earners. These include 106 bodies, chief of which are the associations of school teachers, government employees and commercial travellers, with a combined membership of 103,811.

Complete Labour Directory.—The Nineteenth Annual Report on Labour Organization, like earlier issues, forms a complete labour directory, embracing in its pages not only the names and addresses of the chief officers of local branch unions and delegate bodies in the Dominion, but also those of the central organizations with which the Canadian trade unionists are identified.

RECENT LABOUR UNION ACTIVITIES

Canadian National Railway System Federation No. 11

THE fourth convention of the Canadian National Railway System Federation No. 11, was opened at Winnipeg, Man., on June 6, 1930, with a large number of delegates in attendance. The executive committee's report reviewed at considerable length the various questions which had been dealt with by the executive since the last convention, chief among which were: Holidays with pay; Pension plan; Joint Co-operative Management plan; Stabilization of employment; Christmas holiday, and apprentices. The membership, according to this report, numbered 10,995. The financial statement showed total receipts, together with the balance on hand as at April 1, 1928, of $3,530.33, disbursements totalling $2,461.09, and a balance as of April 1, 1930, amounting to $1,069.24.

Hon. Peter Heenan, Minister of Labour, who was present on invitation, made a brief address, during which he touched on the question of old age pensions, Union Label Act, and immigration.

Among the resolutions adopted were the following:

Instructing the incoming officers to secure signed memoranda dealing with all important questions discussed at future conferences between the management and Federation officers, and that copies be sent to all general chairmen;

Recommending that the minimum rate of C.N.R. pension shall be $600 and the maximum $2,000 for employees of twenty-five years' service;

Asking that employees in the stores department be given holidays with pay;

Instructing incoming officers to advise system management officers that craft unions have autonomy over their own craft affairs;

Advocating in connection with retirement that fitness of employees over sixty-five years of age to perform their present occupation be taken into consideration, as well as a medical examination;

Recommending that employees desiring to retire after twenty-five years' service be paid a pension.

Officers were elected as follows: president, W. R. Rogers, Moncton, N.B.; vice-president, Harry Davis, Winnipeg, Man.; secretary-treasurer, A. B. Page, Winnipeg, Man.

Canadian Association of Stationary Engineers

The Canadian Association of Stationary Engineers held its forty-first annual convention at Woodstock, Ont., on June 26-28, 1930, with representatives from ten local unions in attendance. The financial and other reports presented to the convention showed that the past year had been a very successful one for the association. A committee was appointed to wait on the Provincial Government of Ontario, with a view to securing amendments to the Stationary Engineers' Act and changes in the Boiler Inspection Regulations. A lengthy discussion took place on the question of a colour scheme for piping, such as would indicate its purpose, and it was finally decided to appoint a committee to co-operate with a number of interested organizations in devising a proper colour scheme to be submitted to the Canadian Engineering Standards Association at Ottawa.

Officers elected for the coming year were as follows: president, J. B. Mulligan, Ottawa, Ont.; vice-president, R. E. Aenup, Woodstock, Ont.; secretary, Ed. Golightly, Toronto, Ont.; treasurer, I. E. Cross, Ottawa, Ont.

The association will hold its 1931 convention in Toronto.

Switchmen's Union of North America

The fifth triennial and eighteenth international convention of the Switchmen's Union of North America was held recently at Buffalo, N.Y., with approximately two hundred and fifty delegates in attendance. The report of the committee on officers' reports commended the various officers for the conscientious manner in which the work of the Union had been performed since the last convention. The finance committee's report showed total receipts for the three year period ended January 1, 1930, together with the balance on hand as at January 1, 1927, amounting to $5,148,155.10, disbursements totalling $3,774,732.01, and a balance on hand of $1,373,423.09.

The convention endorsed the action of the board of directors in authorizing the president to co-operate with representatives of the railroad running trades in any action agreed upon for the stabilizing of employment, and went on record further, as favouring the following program:

Not less than one day rest in seven for all railroad workers;

Actual establishment of the maximum eight hour day;

A minimum five-day week and a minimum six-hour day;

Gradual shortening of the work day or work week, without loss of compensation;

Establishment by agreement with each railroad annually of a minimum force for each class of employees, to be guaranteed a minimum annual employment for the ensuing year, and the establishment of extra forces with similar guarantees, to protect those reasonably needed for part-time work;

Relief of employees from undue burdens caused by economy, efficiency or consolidation programs;

Acceptance of the principle of "preventive overtime" rates of pay.

Other resolutions were adopted as follows:

Recommending the establishment of railroad councils in all railroad centres;

Favouring the stationing in Canada permanently of a representative of the union;

Petitioning the Governor of California to grant a pardon and release of Thomas J. Mooney.

Chief officers elected were: president, T. C. Cashen; secretary, J. M. Perry, 3 Linwood Ave., Buffalo, N.Y.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Accident Prevention in Cement Plants

A recent issue of the *Accident Prevention Magazine*, published by the Portland Cement Association, contains a comprehensive account of safety activities in the plants of the organization. A review of the statistics indicates that the group of one hundred and thirty-eight cement mills and quarries which reported their mishaps to the Portland Cement Association had fewer accidents of all recordable classes in 1929 than during any previous year of record.

There were fewer days lost due to accident causes, and likewise a lower number of days lost per hundred thousand man-hours of exposure than during any previous year; the number of permanent disabilities suffered also reached a new low level. Fatal accidents were higher than during 1927 and 1928 but lower than any other year since the record was established. The relative severity was higher than for any year since 1925.

Lost-time accidents had declined steadily each year since 1923, the reduction in this class of accident being about 73 per cent during the past five years. In 1929 this class of accident was 29 per cent less numerous than during 1928, the actual number reported dropping from 877 in 1928 to 686 in 1929. There was a relatively greater reduction in accidents causing disability of short duration than in the longer ones, although actual reductions in all the various classifications shown are very marked.

In addition to a large decrease in the actual number of mishaps occurring, the supporting detailed data seem to indicate that malingering on the excuse of trivial accidents has been greatly reduced. It was also stated, that many minor disabilities which in the past have caused the loss of short periods of time, frequently do not cause such loss at present, due to improved medical and first aid attention, better arrangements for co-operating with the injured in the handling of his regular duties and an increase in interest by the later in the progress of his work and of the mill operations in general. The plant physicians are credited with having "helped notably in the effort to get men back with minimum loss of time and wages." The report observes that "the trend in this direction has been a powerful help in the building up of the present fine morale in the operating organization."

Effect of Length of Service.—The effect of length of service on accident occurrence is analyzed in a section which indicates that during 1929, 29·2 per cent of the lost-time fatal accidents occurred to men employed less than 6 months, while in 1928, 28·8 per cent of the similar accidents occurred to men employed less than 6 months. Men employed between 6 months and one year sustained 9·8 per cent of the injuries in 1929 as against 10·2 per cent in 1928. Employees with terms of service of 10 years or longer suffered 14·3 per cent of the accidents in 1929 as compared with 10·2 per cent in 1928, indicating that the older men had a considerably more unfavourable effect on the record than during the preceding year. Of the 36 fatalities on which length of service was reported, 22 were to men who had served two years or more, while ten took the lives of men employed less than six months.

While figures are not available to indicate which group suffered the most fatalities in comparison to man-hours worked it is stated that fatalities have hit every one of the

classes, suggesting that "perhaps, that the 'familiarity which breeds contempt' has brought habits of carelessness to some older employees, resulting in death to several of their number. It has been said that eternal vigilance is the price of safety. This does not mean that a man is safe simply because he has been on the job, a certain number of years. There must be no let-up in safe thinking and safe habits."

Reference was also made to the fact that The Joseph A. Holmes Safety Association Certificate of Honour was recently awarded to the Portland Cement Association in recognition of outstanding work in the reduction of accidents in the cement industry.

Organization to Aid Fishermen

With the object of helping destitute fisherfolk in the Gaspé region, a company has been formed with a capital of $150,000 entitled "The Committee of Citizens in Aid of the Destitute Fishermen of the Gaspé Coast, Incorporated."

Last year severe storms and porpoises played havoc with the fishing population of Gaspé, but new boats were built, with government aid, while the industry was put on a firmer basis in order to proceed this spring.

Substantial aid was again given this year by the Provincial Department of Colonization, Game and Fisheries in the building of fishing smacks and the purchase of gear, but the new company wants to make sure that the fishermen and their families do not suffer. They propose to raise funds by members' contributions, public collections, bazaars, kermesses, subscriptions and drawings.

Increase in Accidental Deaths in United States

The 1930 edition of "Accident Facts," recently published by the National Safety Council of the United States reviews the accident experience not only in the United States but in other countries.

It is stated that the accident experience in 1929 resembled that of other recent years in three respects, showing an increase in the total number of persons killed, an increase in the death rate per 100,000 population, and a marked increase in automobile deaths. The third of these was outstanding.

Ninety-seven thousand people were killed in the United States by accidents in 1929. This estimate is based on state health department reports to the National Safety Council from 34 states and the District of Columbia, representing 69 per cent of the entire population. In these states, deaths in 1929 exceeded those in the previous year by 2·6 per cent. Past records indicate, however, that these states are not quite representative of the country as a whole. Proper corrections were therefore made, with the result that, for the entire country, the 1929 increase in deaths is estimated at approximately 2 per cent rather than 2·6 per cent. The total of 97,000 may be contrasted with 95,086 deaths in 1928, as determined by final United States Census Bureau figures. It is pointed out that the increase of approximately 2,000 deaths is as large as has occurred in a single year since 1925, during which total accidental deaths were approximately 5,000 greater than in 1924.

It is estimated that the 1929 death rate per 100,000 population will be about 79·9, as compared with 79·2 in 1928, and 78·4 in 1927. The year 1927 was the first since 1921 to show a decline in the death rate, and the 1928 and 1929 experience indicates that the upward movement has set in again.

The third important characteristic of the 1929 experience, mentioned above, is the great increase in motor vehicle deaths, amounting to approximately 3,000. Since the increase in total fatalities was only 2,000, it is considered evident that the fatalities not involving motor vehicles decreased by about 1,000.

Dealing with the accidental death rate in other countries the report observes that while the death rate from accidents remains higher in the United States than in any other important country, in some countries it is advancing more rapidly. The statistics presented show that from 1927 to 1928 the death rate in England and Wales increased from 38·2 to 41·1, a rise of 2·9 deaths per 100,000 population; in New Zealand the increase was 5·8. During the same time the death rate in the United States increased from 78·4 to 79·2 or 0·8 deaths per 100,000. Almost all of the increases were due to automobile accidents.

During the last five years the average annual increase in the United States has been 0·7 deaths per 100,000 population. In France, the latest figures indicate an annual increase of 1·0 deaths; in Germany, 0·9; in Japan, 3·6; and in Canada, 2·2. On the other hand, in Sweden the rate decreased from 34·8 in 1927 to 31·4 in 1928; in Belgium, from 32·1 in 1924 to 29·8 in 1927; and in Italy, from 32·3 in 1924 to 32·1 in 1927.

Industrial Accidents.—In a section dealing with industrial accidents, the difficulty of estimating the total number of industrial deaths in the United States is attributed to the fact that "no one takes the responsi-

bility or has the power to collect complete information." However, the report states that estimates of industrial deaths range from 20,000 to 25,000 deaths annually, and for the sake of uniformity an estimate of 23,000 has been made for 1929. Calculating on the basis that "non-fatal injuries in industry occur about 130 times as often as fatalities, it is estimated that there were approximately 3,000,000 such injuries in 1929. The cost of these deaths and injuries, based on estimates of the United States Bureau of Labour Statistics, was approximately $1,000,000,000. In regard to frequency and severity rates, the following observation is made:—

"The control which employers exercise over men at work and the keeping of records makes possible an accurate measurement of accidents in relation to the number of men employed and the length of time they are exposed to accidents. The accident frequency rate is the number of accidents per 1,000,000 man hours worked and the accident severity rate represents the days lost from accidents per 1,000 man hours worked, permanent disabilities and deaths being allowed for by arbitrary charges in terms of days lost."

On the basis of the above definition a statistical table indicates that the mining industry had a frequency rating of 74·43 and a severity rating of 9·99. The corresponding ratings in several other industries were as follows:—construction—50·41 and 4·62; refrigeration—43·35 and 3·04; meat packing—55·94 and 1·47; quarrying—26·71 and 6·11; pulp and paper—28·43 and 1·77; foundry—30·30 and 1·73; metal forming—29·71 and 1·67.

Stimulation of Public Works in the United States

Referring to a petition asking President Hoover to undertake the stimulation of public works, the Acting Chief of the Division of Public Construction of the United States Department of Commerce replied on June 12, setting forth the program on which the government had already been working for the purpose of stimulating public construction.

The Federal Government's part in the public works program is indicated by the followed actions by Congress.

Congress increased the amount of Federal aid to the States for highway construction from 75 million to 125 million dollars a year for three years, and liberalised the terms for its use. The Federal building program for post offices and other structures in the cities and towns throughout the country was increased by 230 million dollars. The river and harbour improvement work carried out by the War Department has been so expanded on account of the unemployment situation that a deficiency appropriation of 12 million dollars was granted by Congress in order to sustain active operations. A 15 million dollar Veterans' Bureau Hospital building program was provided by Congress and begun immediately on the adoption of the Act. Every Federal department and bureau carrying out construction has advanced the start of new projects, repairs and maintenance wherever possible. A new Division of Public Construction was established in the Department of Commerce to aid in coordinating the efforts of Federal, State and local governments to expedite public works projects.

Highway construction contracts amounted to 197 million dollars in 37 Eastern States during the first four months of 1930, showing an increase of 38 per cent over the same period in 1929.

In the field of private industry, the railway and other public utilities have provided for an expenditure of 3,500 million dollars on new construction and other capital improvements. While residential building has not been well sustained, the total of other construction contracts is at about the same level this year as in 1929.

The Ontario Mining Association, at its annual meeting held at Sudbury in July, decided to form an Accident Prevention Association, and a provisional board of directors was appointed composed of the executive committee of the Association, together with representatives of industrial groups. One of the problems considered at the meeting was to find a fair basis to be used in assessing the cost of silicosis as between the various mining camps for the purposes of workmen's compensation. The association had engaged the services of an actuary to investigate this subject, and his report was adopted by the Association.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Ratification of Conventions

"Industrial and Labour Information", the weekly publication of the International Labour Office, in its issue of July 21 announced the registration during the preceding week of ten additional ratifications to Conventions adopted by the International Labour Conference. These bring the total number of ratifications to 402. It may be of interest to recall that the third hundred was attained a little over two years ago, on the eve of the opening of the Eleventh Session of the Conference. Nine of the new ratifications are to the credit of the Irish Free State, which has now ratified in all 19 Conventions, including several adopted before 1923, when that State became a Member of the Organization. Only two countries have ratified a larger number of Conventions, namely, Luxemburg (25) and Bulgaria (23). The tenth new ratification comes from Greece, which has now ratified 13 Conventions.

The average number of ratifications per Convention to-day is 14, as compared with 6 in 1924. The Convention which has so far obtained the highest number of ratifications is that adopted by the Seventh Session of the Conference (Geneva, 1925) relating to equality of treatment for national and foreign workers as regards workmen's compensation for accidents. No fewer than 27 States have mutually undertaken to grant to each other's nationals, in case of injury by industrial accidents, the same treatment in respect to workmen's compensation as they grant to their own nationals. "This fact, in itself, represents an achievement in international co-operation of which the International Labour Organization is entitled to be proud, and should hearten those of its friends who are inclined at times to be impatient at the rate at which the network of ratifications is extending."

Ratifications by the Irish Free State.—The Secretariat of the League of Nations registered, on July 5, the formal ratification by the Government of the Irish Free State of the following Conventions adopted by the International Labour Conference:

Concerning unemployment indemnity in case of loss or foundering of the ship (Second Session, 1920);

Fixing the minimum age for the admission of young persons to employment as trimmers or stokers (Third Session, 1921);

Concerning the compulsory medical examination of children and young persons employed at sea (Third Session, 1921);

Concerning equality of treatment for national and foreign workers as regards workmen's compensation for accidents (Seventh Session, 1925);

Concerning the simplification of the inspection of emigrants on board ship (Eighth Session, 1926);

Concerning seamen's articles of agreement (Ninth Session, 1926);

Concerning the repatriation of seamen (Ninth Session, 1926);

Concerning the marking of the weight on heavy packages transported by vessels (Twelfth Session, 1929); and

Concerning the protection against accidents of workers employed in loading or unloading ships (Twelfth Session, 1929).

Ratification by Greece.—The formal ratification by the Hellenic Government of the Convention concerning the compulsory medical examination of children and young persons employed at sea, adopted by the International Labour Conference at its Third Session (1921) was registered on June 28, 1930 by the Secretariat of the League of Nations.

Australia and the Conference

The Government of the Australian Commonwealth has informed the International Labour Office that the Conventions and Recommendations adopted by the International Labour Conference at its Twelfth Session (1929), were duly presented to the Commonwealth Parliament on March 21, 1930. As the matters covered by these instruments fall to a considerable extent within the jurisdiction of the States, copies have been referred to the State Governments for consideration and any action they may consider necessary to give effect to the provisions of the Conventions and Recommendations in question.

Publications of the Office

The latest issue of the *Official Bulletin of* the International Labour Office (Vol. XV, No. 2) contains the following official reports and documents:

Proceedings of the Forty-Eighth Session of the Governing Body of the International Labour Office.

Interpretation of the decisions of the International Labour Conference with regard to the employment of women before and after childbirth, the use of white lead in painting, and workmen's compensation for occupational diseases.

Notes on official action on the decisions of the International Labour Conference by China, Esthonia, Germany, the Irish Free State, Spain, and Uruguay.

CANADIAN DELEGATION IN ATTENDANCE AT 14TH SESSION OF THE INTERNATIONAL LABOUR CONFERENCE

(Left to right) J. T. Foster, Vice-President, Trades and Labour Congress of Canada, Montreal; Tom Moore, President, Trades and Labour Congress of Canada, Ottawa; Gerald H. Brown, Assistant Deputy Minister of Labour, Ottawa; H. W. Macdonnell, Secretary, Industrial Relations Dept., Canadian Manufacturers' Association, Toronto; Mrs. R. F. McWilliams, Winnipeg; A. M. Boucher, Quebec; Dr. W. A. Riddell, Canadian Advisory Officer, League of Nations, Geneva, Switzerland; J. R. Roaf, Chairman, British Columbia Division, Canadian Manufacturers' Association, Vancouver, and D. W. Morrison, Glace Bay, N.S.

DELEGATES AND ADVISERS IN ATTENDANCE AT 14TH SESSION OF THE INTERNATIONAL LABOUR CONFERENCE

Canadian delegates seated at second row of desks; Canadian advisers immediately behind them.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JUNE, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting on July 1, was 7,283, their employees numbering 1,043,232 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for June, was 1,688, having an aggregate membership of 201,672 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 64 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning of July, 1930, as Reported by the Employers

There were further pronounced increases in employment at the beginning of July, according to statements tabulated by the Dominion Bureau of Statistics from 7,283 firms employing 1,043,232 workers, or 21,296 more than on June 1. This advance, which was similar in size to that recorded on July 1, 1929, brought the index number to 118·9, as compared with 116·5 in the preceding month, and with 124·7, 117·7, 109·7, 105·0, 98·0, 97·1, 100·7, 92·2 and 88·6 at the beginning of July in 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. Industrial employment was thus at a higher level on July 1, 1930, than at the beginning of July in any other year on record with the exception of 1929.

The largest gains were reported in construction, steam railway, transportation, services and trade, while manufacturing, mining and logging showed curtailment, that in the last-named being seasonal in character.

Employment by Economic Areas

The trend was favourable in all provinces except Ontario, the greatest expansion taking place in the Maritime Provinces.

Maritime Provinces.—Statements were tabulated from 577 firms employing 95,215 workers, as against 82,374 in the preceding month. This increase of 12,841 persons brought employment to a much higher level than in any other month of the last ten years, the index standing at 141·1, as compared with 117·9 on July 1, 1929, and 127·5 on August 1 of last year, the previous maximum. Construction recorded the greatest improvement, there being unusually large increases in highway construction, but there were also gains in logging, services, communications and trade; on the other hand, manufacturing was slacker, chiefly in the iron and steel and fish-preserving industries, and transportation also showed seasonally reduced activity.

Quebec.—Construction, transportation, trade and services reported the largest additions to staffs in Quebec, while logging was seasonally dull with the end of river-driving, and manufacturing also released employees. The forces of the 1,683 co-operating employers aggregated 297,187 persons, compared with 291,239 on June 1. This advance involved rather fewer workers than that registered on the same date of last year, when the index was over two points higher; with this exception, employment at the beginning of July, 1930, was at a higher level than on the same date in any other year on record.

Ontario.—There was a slight falling-off in activity in Ontario, where the 3,216 firms whose statistics were tabulated reported 418,968 employees, or 3,468 less than on June 1. Considerable gains were shown in construction, transportation, services and trade, but logging and manufacturing, especially of iron and steel products, were seasonally quiet, and there were also losses in mining and communica-

tions. Small increases had been indicated on July 1, 1929, when the index was many points higher.

Prairie Provinces.—The most noteworthy advances in this area were in construction, but manufacturing, transportation, services, trade and communications also showed improvement. Data were compiled from 1,067 employers with an aggregate staff of 142,974 workers, as against 137,271 in their last report. This increase of 5,703 workers was greater than that registered on the same date of last year, but the level of employment was lower than on July 1, 1929.

Employment by Cities

In Montreal, Toronto, Ottawa, Hamilton, Windsor and the Adjacent Border Cities and Vancouver, reductions in employment were reported, while improvement was indicated in Quebec City and Winnipeg.

Montreal.—Employment in Montreal showed a slight decline, there being losses in manufacturing and transportation; on the other hand, construction and trade reported heightened activity. A combined working force of 144,530 persons was indicated by the 916 co-operating employers, who had 145,135

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

British Columbia.—Moderate improvement over June was reported in British Columbia, where the index stood at 113·5, as compared with 118·2 on July 1, 1929, when the trend was also upward. A total working force of 88,888 persons was employed by the 740 firms whose data were received, and who had 88,616 workers in the preceding month. Manufacturing, particularly of lumber products, was slacker, as was logging, but trade, services, transportation and construction recorded gains, that in highway construction being most important.

Table I gives index numbers by economic areas.

on June 1. Gains were noted on July 1, 1929, and the index then was several points higher.

Quebec.—Further improvement was reported in Quebec, where statements were tabulated from 122 firms with 13,265 employees, compared with 12,484 in the preceding month. Construction, transportation and services registered practically all the advance. The index was rather higher than at the beginning of July, 1929, when the gain shown was on practically the same scale.

Toronto.—Trade, services and road construction reported increased activity, while there were losses in employment in manufac-

turing and building construction. The 999 employers furnishing data reduced their staffs by 893 workers to 125,737 at the beginning of July. An advance had been reported on the same date last year, when employment was in greater volume.

Ottawa.—Statistics were received from 142 employers with 13,790 persons on their pay-lists, compared with 13,932 in the preceding month. Most of the decline took place in construction. Small additions to payroll were indicated on July 1, 1929, but the index was then slightly lower than on the date under review.

Hamilton.—There was a further decline in Hamilton, where employment was in less volume than on the same date of last year; 824 workers were let out from the forces of 216 firms furnishing information, bringing them to 34,485 at the beginning of July. Manufacturing reported practically all the reduction, which was not pronounced in iron and steel plants.

Windsor and the Adjacent Border Cities.—Further curtailment in employment, mainly in automobile plants, caused a loss of 1,743 persons in the staffs of the 138 reporting employers, who had 16,605 in their employ on

NOTE.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by Districts as at July 1, 1930	100·0	9·1	28·5	40·2	13·7	8·3

the date under review. The index was lower than on July 1, 1929, when large losses were also reported.

Winnipeg.—Communications, construction and trade registered advances, while other industries showed only slight changes. An aggregate working force of 33,239 employees was reported by the 350 co-operating firms; this was 747 more than on June 1. The improvement noted on the same date of a year ago involved practically the same number of persons, but employment then was generally more active.

Vancouver.—The trend of employment in Vancouver was unfavourable, according to information from 282 establishments employing 29,563 workers, as against 29,801 in the preceding month. There were small gains in construction, services and trade, but manufacturing, chiefly of lumber products, was slacker. An increase had been recorded by the firms making returns for July 1, 1929, when the index was slightly higher.

Index numbers by cities are given in Table II.

Manufacturing Industries

Canneries and other food, rubber and building material factories registered heightened activity, but seasonal curtailment was shown

Note.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

Relative weight of employment by cities as at July 1, 1930	13·8	1·3	12·0	1·3	3·3	1·6	3·2	2·8

in textile and iron and steel plants, and leather, lumber, pulp and paper, and some other groups also recorded contractions in employment. The 4,416 co-operating manufacturers employed 536,892 operatives, as against 547,743 in the preceding month. Decreases were also indicated in this division on July 1, 1929, but the index then was higher.

Animal Products, Edible.—Additions to staffs were again recorded in this group, 593 persons being taken on by the 219 establishments making returns, which had 20,472 in their employ. Much of the improvement took place in fish-canneries in British Columbia, but gains were also noted in the dairying industry. The index on July 1, 1930, was slightly lower than on the same date in 1929.

Leather and Products.—Statements were received from 185 manufacturers in this division, employing 15,449 workers, as compared with 15,773 in the preceding month. The bulk of the decrease took place in Quebec and Ontario. The situation was not so favourable as on the same date in 1929, when gains were indicated.

Lumber and Products.—Rough and dressed lumber mills, furniture and vehicle factories

NOTE:—The "Relative weight" in Table 3 shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

showed reduced activity. Gains had been noted on July 1, 1929, when the index was much higher. A combined working force of 54,343 employees was reported by the 741 co-operating firms; this was 1,729 less than at the beginning of June. Ontario and British Columbia shared in the downward movement.

Plant Products, Edible.—The resumption of operations in canneries, together with increases in personnel in chocolate and biscuit and confectionery factories, caused an advance which considerably exceeded that registered on July 1 a year ago. Returns were received from 392 manufacturers of vegetable foods, having 32,479 operatives, as against

TABLE IV.—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	[1]Relative weight	July 1930	June 1930	July 1929	July 1928	July 1927	July 1926	July 1925

[1] The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

30,196 in their last report. The improvement in Ontario and British Columbia was most noteworthy. The index was higher than it was early last summer.

Pulp and Paper Products.—There was a decline in the pulp and paper group, chiefly in pulp and paper mills in Ontario. The 538 co-operating employers in the Dominion reported 66,072 workers, compared with 66,542 on June 1. Additions to staffs had been indicated on July 1, 1929, when the index of employment was higher.

Rubber Products.—Further additions to staffs were registered in rubber factories, chiefly in Quebec. The index was lower than in the summer of last year, although the tendency was then downward. Statistics were tabulated from 38 firms with 15,412 employees on the date under review, as compared with 15,077 in the preceding month.

Textile Products.—Seasonal curtailment of operations, mainly in Quebec and Ontario, was reported by the 676 co-operating textile manufacturers, who employed 79,146 workers, or 2,389 less than at the beginning of June. The largest losses were in garment, cotton, headwear and knitting mills. Similar declines were indicated on the corresponding date in 1929, but the level of employment then was higher than on the date under review.

Tobacco, Distilled and Malt Liquors.—Employment in this division showed practically no change, according to statistics from 146 establishments, employing 16,014 persons. There were minor increases in Quebec, the Maritime and Prairie Provinces, but declines in Ontario and British Columbia. A slight improvement had been shown on the same date last year, when the index was fractionally lower.

Chemical and Allied Products.—There was a falling-off in activity in chemical factories; 117 firms reported 7,470 employees, compared with 7,711 on June 1. All provinces shared in the downward movement. Very little change in the situation was shown at the beginning of July, 1929, when the index was slightly higher.

Clay, Glass and Stone Products.—Continued advances were noted in building material plants, the 164 co-operating establishments enlarging their forces by 572 persons to 14,222 on the date under review. The bulk of the gain was in Quebec and Ontario. The level of employment was practically the same as on July 1, 1929, when the trend was also upward.

Electric Current.—Curtailment was registered in electric current plants, 92 of which reported a combined working force of 16,050 persons, as against 16,896 at the beginning of June. The index was slightly lower than on July 1, 1929, but considerably higher than in any other July on record.

Electrical Apparatus.—There was a decrease of 214 in the staffs of the 57 manufacturers furnishing data, who had 16,438 employees on July 1. Quebec reported practically all this loss. The number engaged in the production of electrical apparatus, as indicated in these returns, was at its maximum for July 1 in the years of the record.

Iron and Steel.—The trend in iron and steel factories was seasonally downward in all provinces, the losses being practically the same as on July 1 of a year ago, when employment was in greater volume. The greatest falling-off was in automobile and other land vehicle factories, although the rolling mill, machinery, agricultural implement, heating appliances, and other divisions also showed contractions. Returns were compiled from 700 employers whose forces aggregated 141,047 workers, as against 149,087 in the preceding month.

Non-Ferrous Metal Products.—Moderate reductions were registered in non-ferrous metal products, the gold, silver and platinum division showing practically all the loss, while smelters and refineries were rather busier. The 110 co-operating manufacturers employed 19,560 operatives, or 71 less than in the preceding month. A larger decrease was reported on the same date last year, but the index was then higher.

Mineral Products.—A small gain was shown in this division, mainly in Ontario. The situation was better than in July of any other year since 1920. Statistics were received from 85 employers, whose staffs rose from 14,313 on June 1 to 14,365 on July 1.

Logging

The conclusion of river-driving operations in many logging camps, chiefly in Quebec, caused a seasonal falling-off in employment, while curtailment was also shown in British Columbia; 2,055 persons were released from the staffs of the 214 reporting firms, who employed 21,787 at the beginning of July. The decline involved a smaller number of workers than that noted on the corresponding date a year ago, when the index was lower.

Mining

Coal.—There was an increase in employment in coal mines, 81 of which employed

25,605 men, as compared with 25,475 in their last report. There were slight gains in both eastern and western coal fileds. An increase had also been noted at the beginning of July last year, when the situation was more favourable.

Metallic Ores.—Continued reductions were reported in metallic ore mines, mainly in Ontario. Statements were tabulated from 64 operators employing 16,299 workers, or 766 less than on June 1. The index, at 142·2 was higher than on July 1, 1929, when the trend was upward.

Non-Metallic Minerals, other than Coal.—Reductions in payrolls were indicated in non-metallic mineral mines, 73 of which reported 8,617 employees, or 150 less than in their last report. Firms in Ontario reported most of the decline. Employment was in smaller volume than at the beginning of July a year ago.

Communications

Very little change was registered on telephones and telegraphs, according to returns from the companies and branches making returns, which had 31,137 persons on their staffs. The index continued at a high level, although it was slightly lower than on July 1, 1929, when larger gains were noted.

Transportation

Street Railways and Cartage.—Employment in the local transportation group declined, 143 firms reporting 24,831 workers in their employ, as against 25,017 in the preceding month. There were general but small reductions throughout the Dominion. Advances had been noted on July 1, 1929, when the index was over five points higher.

Steam Railways.—Statistics tabulated from 105 companies and divisional superintendents in the steam railway operation group showed that they employed 81,785 workers at the beginning of July, or 1,842 more than in the preceding month. The advance was not so pronounced as that reported on July 1, last year, when employment was above its level at the time of writing. All except the Maritime Provinces shared in the upward movement, which, however, was most noteworthy in Ontario.

Shipping and Stevedoring.—There was a decrease in employment in water transportation on the date under review; 81 companies reduced their staffs by 1,674 employees, bringing them to 17,619. The situation was not so good as at the beginning of July 1, 1929, when an increase had been indicated. There were advances in Quebec, Ontario and British Columbia, but losses in the Maritime Provinces.

Construction and Maintenance

Building.—Continued important advances in employment were noted in building construction, but the gains were not so large as those indicated on the same date in 1929; however, the index, at 150·9, was at its peak for the beginning of July in the years since 1920. The 734 co-operating contractors employed 59,385 workers, as compared with 55,299 in the preceding month. All provinces reported expansion, that in Quebec being most noteworthy.

Highways.—The number of men engaged on road construction and maintenance was greatly augmented on the date under review, when the 257 firms furnishing data had 57,788 employees, or 25,922 more than at the beginning of June. Marked advances were shown generally, those in the Maritime Provinces being largest. Employment in this group was more active than in any other month on record.

Railway.—A combined working force of 47,457 persons was reported by the 55 contractors and divisional superintendents whose statistics were tabulated, and who had 45,135 employees on June 1. All provinces shared in the increase, which was most pronounced in the Prairie Provinces. Slightly larger additions to staffs were noted on July 1 a year ago, and the index then stood at 160·4, compared with 120·6 on the date under review.

Services

Continued and greater expansion was shown in the service group, according to returns from 237 employers with 24,904 persons on their staffs, as compared with 23,455 in the preceding month. The opening of the summer-hotel season caused most of the gain, which was on a slightly smaller scale than that reported on July 1, 1929, when employment was at a rather higher level. The tendency was favourable in all provinces, but the largest increases were in the Prairie Provinces.

Trade

Further pronounced improvement was noted in trade, in which both retail and wholesale establishments afforded heightened employment. Statements were tabulated from 756 firms having 89,126 persons in their employ, or 1,162 more than at the beginning of June. The additions to staffs in Ontario

were most marked. The index, at 129·5, was higher than in the summer of any other year of the record.

Tables

Index numbers of employment by economic areas, leading cities and industries are shown in the accompanying tables, in which the columns headed "relative weight" show the proportion that the number of employees reported in the indicated area, or industry, is of the total number of employees reported in Canada on the date under review.

(2) Unemployment in Trade Unions at the Close of June, 1930

The term unemployment as used in the following report has reference to involuntary idleness, due to economic causes. Persons who are engaged in work other than their own trades or who are idle because of illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

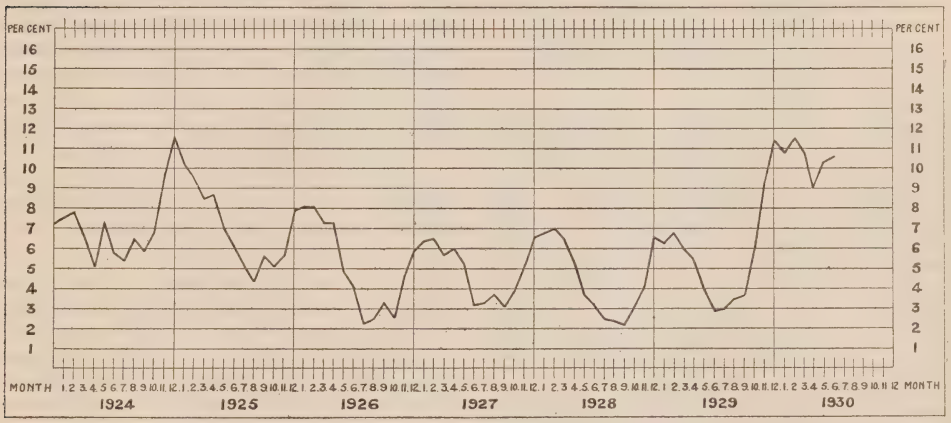
The situation among local trade unions at the close of June remained much the same as in the previous month, the tendency, however, being less favourable. This was indicated by the returns tabulated from 1,688 labour organizations with 201,672 members, 10·6 per cent of whom were idle compared with 10·3 per cent in May. Employment was considerably reduced from June of last year when 2·9 per cent of the members reported were out of work. Quebec, with an unemployment increase of nearly 3 per cent showed the most noteworthy change from May, chiefly due to quietness in building operations. Garment workers in the same province, while continuing to suffer marked employment curtailment, still showed some improvement from May conditions. Minor declines in activity were reported from Saskatchewan, New Brunswick and Manitoba. On the other hand, Alberta and British Columbia each registered an employment gain of slightly over 2 per cent, and Nova Scotia and Ontario unions fractional increases only. The depression indicated in comparison with June of last year was shared by all provinces except Nova Scotia, Quebec unions showing the most extensive employment losses, due largely to the unfavourable situation obtaining for garment workers during June this year. In Alberta also, the declines in activity were substantial. The Nova Scotia situation remained the same in both months of the comparison.

Each month a separate tabulation is made of unemployment among trade union members in the largest city in each province except Prince Edward Island. Montreal unions during June reported the greatest percentage of idleness of any of the cities compared, which was, however, but 2·4 per cent in excess of that reported in May. In Regina also the percentage of inactivity reported was large and the decline in comparison with May was somewhat over 4 per cent. Edmonton and St. John unions in addition, indicated a lower employment volume than in May. On the contrary Vancouver and Halifax unions each reported a gain in activity of over 2 per cent, while in Toronto the situation showed but nominal improvement. In Winnipeg the same level of activity was indicated as in May. Employment curtailment was noted in all cities when compared with conditions in June a year ago, the situation in Montreal, Regina and Edmonton particularly being depressed.

The chart which accompanies this article illustrates the unemployment trend by months from January, 1924, to date. The curve during January this year projected in a slightly downward direction from the preceding month, showing a moderate increase in available work, but in February its course was changed, the extension being upward. During March and April steady improvement in the trade union situation was indicated by the curve which again followed a downward course, while in May and June employment as shown by the curve was somewhat retarded, and the level attained at the end of June was much above that indicated in June a year ago.

Little change from the previous month was shown by unions in the manufacturing industries as a whole during June, as indicated by the returns tabulated from 466 unions with 58,359 members. Of these 7,135 or 12·2 per cent were idle at the end of the month compared with 12·4 per cent in May. Fluctuations, however, occurred in the various trades, the improvement recorded by garment workers being in a large way offset by reductions in activity shown in the iron and steel trades. Pulp and paper makers and leather workers also registered noteworthy gains, while employment for printing tradesmen and glass workers showed some

reduction. An important factor in the unfavourable situation shown in the manufacturing industries over June last year when the unemployment percentage stood at 2·3 was the exceptional dullness existing in the garment trades during the month under review, together with substantial declines among iron and steel workers, though practically all trades were affected to some extent by the depressed conditions indicated.



Coal miners reported more favourable conditions during June than in the previous month, the 44 unions from which returns were received with 16,467 members indicating 6·9 per cent of idleness compared with 9·2 per cent in May. Improvement for British Columbia unions was largely responsible for this advance during June, although in Nova Scotia and Alberta also the trend of employment was slightly upward. Compared with the situation in June of last year when 4·4 per cent of the members reported were idle, Alberta unions registered a large drop in the volume of work afforded during the month under review, while in British Columbia the decline indicated was nominal only, and in Nova Scotia slight expansion was noted.

Unemployment in the building trades at the end of June showed a moderate increase from the previous month, the 217 unions from which reports were tabulated covering a membership of 30,373 persons showing 26·2 per cent of idleness contrasted with 23·3 per cent in May. The level of activity was, however, considerably below that of June, 1929, when 7·5 per cent of the members reported were without work. Reductions in the employment volume when compared with May were reflected by carpenters and joiners, painters, decorators and paperhangers, hod carriers and building labourers, and bricklayers, masons and plasterers, while bridge and structural iron workers, plumbers and steamfitters, tile layers, lathers and roofers, granite and stonecutters, and electrical workers reported somewhat improved conditions. All tradesmen in the building group were less actively engaged than in June of last year, carpenters and joiners and bricklayers, masons and plasterers recording contractions involving the greatest number of members.

Transportation workers were afforded practically the same volume of employment during June as in the previous month, as shown by the 728 reporting unions with 69,975 members. Of these 6·0 per cent were idle on the last day of the month, contrasted with 6·1 per cent of unemployment in May. Steam railway employees, whose returns constitute about 80 per cent of the entire group membership reporting, were slightly better engaged than in May, and nominal improvement was indicated by street and electric railway employees. On the other hand, navigation workers maintained a lower employment level, and among teamsters and chauffeurs nominal recessions occurred. All divisions of the transportation industries shared in the adverse employment movement, shown in comparison with June of last year when 1·5 per cent of the members reported were idle, steam railway employees indicating the most important contractions.

From longshore workers whose returns are tabulated separately each month owing to the casual nature of their work 14 reports

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

were received in June, embracing a membership of 6,427 persons. Of these 962 were idle at the end of the month, a percentage of 15·0, compared with 14.2 per cent in May. Employment for these workers was somewhat reduced from June of last year when 11·7 per cent of inactivity was recorded.

Retail clerks reported a fully engaged situation in both May and June, contrasted with an unemployment percentage of ·5 in June of last year. Reports for the month under review were tabulated from 5 unions of retail clerks with 1,303 members.

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Civic employees with 60 unions reporting 7,747 members in June, indicated ·4 per cent of idleness at the end of the month, compared with ·7 per cent in May and with ·5 per cent in June last year.

Unemployment in the miscellaneous group of trades showed a moderate increase during June from the previous month, the 119 unions from which reports were received with 6,418 members indicating 10·0 per cent of idleness compared with 7·8 per cent in May. A considerable falling off in activity was reported by hotel and restaurant employees, and conditions for stationary engineers and firemen and unclassified workers were also less favourable. On the other hand, theatre and stage employees reported slight improvement from May, and nominal gains were indicated by barbers. In comparing with the returns for June of last year when 3·5 per cent of inactivity was recorded in the miscellaneous group of trades as a whole, hotel and restaurant employees as in the previous comparison reported the greatest contractions during the month reviewed, while the reductions indicated by stationary engineers and firemen and unclassified workers were noteworthy, and employment for barbers declined slightly. Theatre and stage employees, however, registered a nominally improved situation.

From unions of fishermen 3 reports were received in June, embracing a membership of 783 persons, 1·3 per cent of whom were idle on the last day of the month, the same percentage as was recorded in May, contrasted with 2·6 per cent of inactivity in June last year.

Lumber workers and loggers were decidedly busier during June than in May, according to the reports tabulated from 4 unions with 885 members. Of these 20 were idle at the end of the month, a percentage of 2·3 contrasted with 12·7 per cent of unemployed members in May. In June of last year, however, all members were reported actively engaged.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1929 inclusive, and also the percentage of unemployment by provinces for June of each year from 1919 to 1927 inclusive, and for each month from January, 1928, to date. Table II summarizes the returns in the various groups of industries for the same months as in table I.

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing.	Lumbering and Logging.	Mining.	Manufacturing industries.	Vegetable products.	Pulp and paper products.	Pulp and paper mill workers.	Printing, publishing and lithographing.	Wood products.	Fibres, textiles and textile products.	Textile and carpet workers.	Garment workers.	Hat, cap and glove workers.	Animal products.	Iron and its products.	Non-ferrous metals. (3) Employment Office Reports for June, 1930

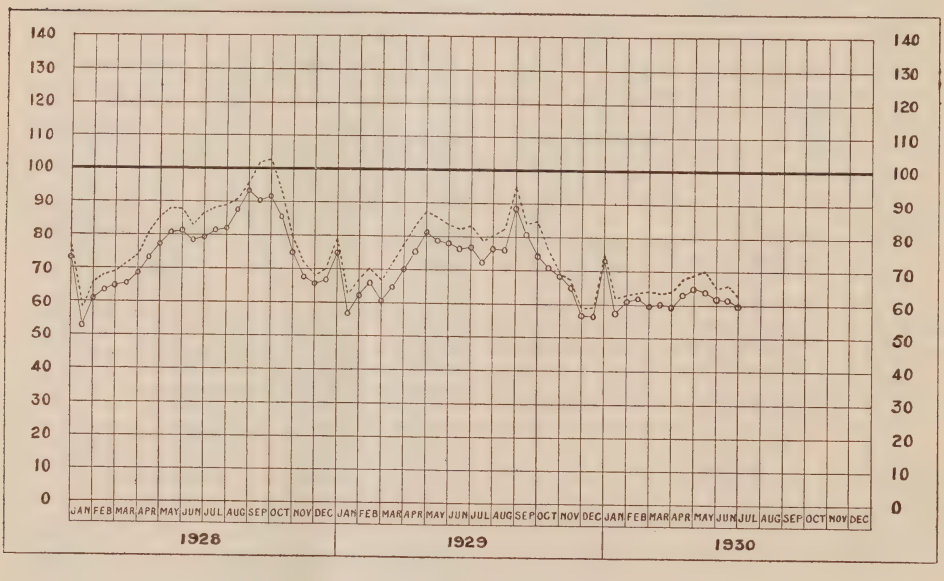
The volume of business transacted by the offices of the Employment Service of Canada for the month of June, 1930, as shown by the average daily placements effected, was 8 per cent lower than that of the preceding period and nearly 27 per cent below the average daily placements effected during the corresponding month a year ago. All industrial divisions showed declines from the preceding month, except farming and mining, and in neither instance was the increase substantial, the largest decreases being shown in services and construction and maintenance. In comparison with June last year, fewer placements were made in all groups, the heaviest declines occurring in manufacturing, construction and maintenance, farming and services.

The accompanying chart shows the trend of employment from January, 1928, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, computations being made semi-monthly. It will be seen that the curve of vacancies and of placements in relation to applications showed little variation during the first half of the month, the former recording a slightly upward tendency while the latter curve showed the reverse. During the latter half of the month both curves registered a downward trend and at the close of the period under review were much lower than the levels shown at the end of the corresponding month a year ago. The ratio of vacancies to each 100 applications was 65·8 during the first half and 62·5 during the second half of June, 1930, in contrast with the ratios of 82·3 and 83·4 during the corresponding periods of 1929. The ratios of placements to each 100 applications during the periods under review were 61·8 and 59·9 as compared with 76·4 and 76·9 during the corresponding month of 1929.



The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during June, 1930, was 1,093 as compared with 1,210 during the preceding month and with 1,531 in June a year ago.

The average number of applications for employment received daily by the offices during the month under review was 1,704 in comparison with 1,789 in May, 1930, and with 1,849 during June last year.

The average number of placements made daily by the offices of the Service during June, 1930, was 1,037, of which 608 were in regular employment and 429 in work of one week's duration or less, as compared with a total daily average of 1,128 during the preceding month. Placements in June a year ago averaged 1,418 daily, consisting of 920 placements in regular and 498 in casual employment.

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ———— Vacancies - - - - - - - - - Placements o—o—o—o—o—o

During the month of June, 1930, the offices of the Service referred 26,150 persons to vacancies and effected a total of 24,884 placements. Of these the placements in regular employment were 14,589, of which 10,438 were for men and 4,151 for women, while placements in casual work totalled 10,295. The number of vacancies reported by employers was 16,607 for men and 9,614 for women, a total of 26,221 while applications for work numbered 40,895, of which 27,921 were from men and 12,974 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1920, to date:—

Year	Placements		
	Regular	Casual	Totals
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930 (6 months)	83,693	70,004	153,697

Nova Scotia

There was a decrease of nearly 10 per cent in the number of positions offered through employment offices in Nova Scotia during June when compared with the preceding month, but a gain of nearly 13 per cent in comparison with the corresponding month of last year. Placements declined nearly 16 per cent from May but were nearly 8 per cent higher than in June, 1929. All industrial divisions except manufacturing, logging and farming participated in the gains in placements over June a year ago. The changes, however, under this comparison were not large in any group. Industrial divisions in which most of the placements were effected during the month were manufacturing 42; logging 42; construction and maintenance 92; trade 105; and services 431, of which 279 were of household workers. During the month 140 men and 60 women were placed in regular employment.

New Brunswick

Employment opportunities as indicated by orders received at employment offices in New Brunswick during June were over 8 per cent less favourable than in the preceding month but nearly 6 per cent in excess of the corresponding month of last year. There was a decline of nearly 10 per cent in placements when compared with May, but a gain of over 8 per cent in comparison with June, 1929. Fewer placements were made in farming, construction and maintenance, services and trade than in June of last year, but these declines were more than offset by gains in manufacturing, logging and transportation. Placements by industrial divisions included manufacturing 66; logging 86; transportation 62; construction and maintenance 137; and services 580, of which 430 were of household workers. Regular employment was found for 295 men and 69 women.

Quebec

During the month of June positions offered through employment offices in the Province of Quebec were nearly 37 per cent less than in the preceding month and nearly 16 per cent fewer than during the corresponding month of last year. There was a decline also in placements of over 33 per cent when compared with May and of 14 per cent in comparison with June, 1929. There was a substantial increase in placements in the logging industry over June of last year, and farming showed some improvement, but these gains were more than offset by declines in all other groups, of which construction and maintenance was the most noteworthy. Industrial divisions in which most of the placements were effected during the month were manufacturing 124; logging 331; farming 106; construction and maintenance 332; and services 620, of which 401 were of household workers. Placements in regular employment numbered 1,040 of men and 410 of women.

Ontario

There was a decrease of nearly 22 per cent in the number of positions offered through employment offices in Ontario during June when compared with the preceding month and of over 32 per cent in comparison with the corresponding month of last year. Placements were over 19 per cent less than in May and over 28 per cent below June, 1929. All industrial divisions participated in the declines in placements in comparison with June of last year, those in manufacturing and construction and maintenance being quite substantial. Placements by industrial groups included manufacturing 1,190; logging 1,108; farming 1,037; mining 46; transportation 291; construction and maintenance 2,244; trade 369; and services 4,822, of which 2,560 were of household workers. During the month 5,196 men and 1,624 women were placed in regular employment.

Manitoba

The demand for workers as indicated by orders received by employment offices in Manitoba during June was over 4 per cent

greater than in the preceding month, but nearly 15 per cent less than during the corresponding month of last year. Placements also showed an improvement over May of nearly 3 per cent, but were over 17 per cent less than during June, 1929. Farming and services were the only groups to show gains in placements over June of last year, and in these the improvement was nominal only. Of the declines, those in logging, trade, construction and maintenance, and manufacturing were the most pronounced. Industrial divisions in which most of the placements were effected during the month were manufacturing 69; logging 41; farming 484; construction and maintenance 237; trade 93; and services 2,077, of which 1,542 were of household workers. There were 727 men and 733 women placed in regular employment.

Saskatchewan

During June, orders received at employment offices in Saskatchewan called for over 20 per cent fewer workers than in the preceding month, and over 31 per cent less than during the corresponding month of last year. There was a decline of 2 per cent in placements when compared with May and of nearly 27 per cent in comparison with June, 1929. Logging and construction and maintenance were the only groups in which more placements were made than in June of last year. Farming and services showed the most marked decline in placements under this comparison. Placements by industrial divisions included manufacturing 100; logging 107; farming 438; transportation 64; construction and maintenance 556; trade 60; and services 907, of which 506 were of household workers. During the month 880 men and 355 women were placed in regular employment.

Alberta

Orders listed at employment offices in Alberta during June called for over 3 per cent fewer workers than in the preceding month and over 29 per cent less than during the corresponding month of last year. Placements also declined 3 per cent when compared with May and over 31 per cent in comparison with June, 1929. All industrial divisions participated in the declines in placements from June of last year, those in farming accounting for more than half the total reduction. Industrial divisions in which most of the placements were effected during the month included manufacturing 123; farming 808; mining 53; construction and maintenance 609; trade 62; and services 866, of which 543 were of household workers. There were 1,102 men and 382 women placed in regular employment.

British Columbia

Opportunities for employment as indicated by orders received at employment offices in British Columbia during June were over 5 per cent less favourable than in the preceding month and nearly 44 per cent below the corresponding month of last year. Placements were nearly 6 per cent less than in May and over 43 per cent fewer than in June, 1929. The declines in placements from June of last year were general in all industrial divisions, although the heaviest decreases were in manufacturing, construction and maintenance; farming and logging. Industrial divisions in which most of the placements were effected during the month were manufacturing 187; logging 130; farming 557; mining 49; transportation 112; construction and maintenance 572; trade 60; and services 928, of which 489 were of household workers. Placements in regular employment numbered 1,058 of men and 518 of women.

Movement of Labour

During the month of June, 1930, the offices of the Employment Service of Canada made 14,589 placements in regular employment, 7,540 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,010 were granted the Employment Service reduced transportation rate, 821 travelling to points within the same province as the despatching office and 189 to other provinces. The reduced transportation rate which is 2·7 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Offices in Quebec granted 106 certificates for reduced transportation during June all of which were issued to bushmen. Of these 46 went to provincial employment and 60 to points outside. The provincial labour movement was entirely from Montreal to points within the same zone, while the Hull office was responsible for all interprovincial transfers which included 34 bushmen going to Cobalt and 26 to Pembroke.

In Ontario 433 persons secured certificates for reduced transportation during June, 396 of whom were destined to provincial employment and 37 to points in other provinces. Within the province the Sudbury office effected transfers of 265 pulp cutters, 2 cooks, and one sawmill labourer and Port Arthur of 92 bush workers and one farm hand to situations within their respective zones. The movement from Toronto included three bushmen going to Belleville, two hotel employees and one

cookee to Ottawa, one boilermaker and one hotel chef to Kingston, one engineer to Port Arthur, one bushman to Timmins and one butcher to Windsor. Securing certificates at Fort William, one paper mill worker travelled to Timmins and 13 bush workers, one hotel cook and one cookee to centres within the Fort William zone while from Cobalt three linemen went to Timmins and one blacksmith to Port Arthur. In addition, the Kingston zone received one boilermaker from Brantford and one from Windsor while Timmins was the destination of two sawmill labourers bound from North Bay. Included in the transfers outside the province were 29 elevator construction workers travelling from Port Arthur and two construction foremen and one carpenter from Fort William to centres within the Winnipeg zone. In addition, Cobalt despatched three miners to Amos, and Toronto one labourer to Hull and one hotel employee to Regina.

Transfers at the special reduced rate from Manitoba points during June were 271 in number, 193 of which were provincial and 78 interprovincial. Provincially from Winnipeg five farm generals, five hotel employees, two sanitarium workers and one kitchen maid travelled to centres within the Brandon zone, one hotel waitress to Dauphin and 84 mine construction workers, 65 farm hands, one farm general, 18 highway construction workers, two bricklayers, one teamster, one construction labourer, two hotel workers and three pulp cutters to employment at various points within the Winnipeg zone. To centres within its own zone, Dauphin despatched two carpenters. All the workers going to other provinces were transferred from Winnipeg, 37 of whom were destined to the Port Arthur zone including 10 bush workers, 7 farm hands, one farm general, four sawmill workers, four railway construction workers, 6 domestics, three cooks, one waitress and one gardener. In addition Estevan received two hotel waitresses and Swift Current one railway construction worker, while to Saskatchewan rural localities 35 farm hands and three farm generals were carried at the special rate.

From Saskatchewan centres 68 persons took advantage of the Employment Service reduced transportation rate, 66 of whom travelled to points within the province. Of these, 35 were farm hands and three farm household workers going to various provincial points, the Moose Jaw, Regina and Saskatoon offices combining to effect these transfers. At the Regina office, in addition, 10 highway construction workers secured certificates for reduced transportation to Yorkton, three highway construction workers and one carpenter to Saskatoon, one school teacher and one highway construction worker to Moose Jaw, one baker's helper and one school teacher to Swift Current and one blacksmith and one hotel cook to employment within the Regina zone. From Moose Jaw also, one cook and one cookee were despatched to Regina and two hotel workers within the Moose Jaw zone, while from Saskatoon one domestic proceeded to Regina and two bush workers to Prince Albert. The one remaining provincial transfer was of a river driver bound from Prince Albert to a point within the same zone. Of the two persons going outside the province one was a carpenter and one a barber's apprentice shipped from Regina to the Dauphin zone

Alberta offices granted 75 certificates for reduced transportation during June, 65 of which were to provincial points and 10 to centres in other provinces. Of the provincial certificates 53 were issued at Edmonton from which centre three farm hands were conveyed to Drumheller, two beet workers to Lethbridge and 17 farm hands, 13 mine workers, 5 highway construction workers, 2 fishermen, 4 sawmill workers, 2 teamsters, one bridgeman, two labourers, one blacksmith, and one bushman within the Edmonton zone. The balance of the provincial movement was from Calgary, which office despatched three farm hands and one farm domestic to Edmonton, one farm hand and two farm housekeepers to Lethbridge, one housemaid and one farm housekeeper to Drumheller and three farm hands within its own zone. Included in the transfers outside the province from Calgary were two domestics going to Nelson, one housemaid to Cranbrook, one farm hand each to the Saskatoon and Yorkton zones and one mine worker to Winnipeg. In addition, the Cranbrook zone received four fruit pickers from Lethbridge.

Business transacted by British Columbia offices in June involved an issue of 57 reduced rate certificates, 55 of which were issued to points within the province, the balance representing an interprovincial movement. Provincially, certificates were granted at Vancouver to one shingler, one cook, one flunkey, two miners and one farm hand journeying to Kamloops, two cooks, one engineer, one carpenter and one blacksmith to Penticton, five mine workers to Revelstoke, two engineers and one stationman to Nelson, one farm cook and one farm hand to Kelowna, one cook to Vernon and to eight loggers, five tunnel construction labourers, one carpenter, one miner, one cement finisher and one flunkey going to various points within the Vancouver zone. From Prince Rupert two miners were transported to Prince George and one cook and one carpenter within the Prince Rupert zone while from Nelson eight bush workers and one cook, and from Prince George two labourers and one mine worker were sent to points within their respective zones. The two

transfers outside the province were of a farm hand and a farm housekeeper travelling from Vancouver to Swift Current.

Of the 1,010 persons who benefited by the Employment Service reduced transportation rate during June, 613 were transported by the Canadian National Railways, 381 by the Canadian Pacific Railway, 8 by the Temiskaming and Northern Ontario Railway and 8 by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada During June, 1930

The value ofthe building permits issued by 61 cities during June was $17,935,478; this was a decrease of $1,685,824 or 8·6 per cent as compared with the May total of $19,621,-302, while in comparison with June, 1929, there was also a decline of $9,881,114 or 35·5 per cent, the value for that month having been $27,816,592. The aggregate for the first half of 1930, though lower than in 1929 or 1928, was nevertheless considerably above the average for the last ten years, while the wholesale cost of building materials was lower than in most years of the record.

Some 50 cities furnished detailed statements showing that they had issued over 1,200 permits for dwellings valued at nearly $6,000,000 and some 2,900 permits for other buildings estimated to cost approximately $11,900,000. During May, authority was given for the erection of over 1,300 dwellings and some 3,200 other buildings, valued at approximately $5,300,000 and $10,000,000, respectively.

Improvement over May, 1930, was reported in New Brunswick, Ontario, Manitoba, Saskatchewan, Alberta and British Columbia, the gain of $474,832 or 5·0 per cent in Ontario being most pronounced. Of the declines elsewhere, that of $2,247,055 or 44·1 per cent in Quebec was largest.

As compared with June, 1929, there were decreases in all provinces except Ontario, British Columbia reporting the greatest loss of $4,324,240 or 75·6 p.c.

Of the larger cities, Toronto recorded important increases in the value of the permits issued, as compared with both the preceding month and the corresponding month in 1929. Montreal, Winnipeg and Vancouver showed declines in both comparisons. Of the other cities, Sydney, Fredericton, Sherbrooke, Brantford, Owen Sound, Peterborough, St. Thomas, St. Boniface, Lethbridge, New Westminster, Prince Rupert and Victoria reported improvement over May, 1930, and June, 1929.

Table I gives the value of the building permits issued by 61 cities during May and June, 1930, and June, 1929; the 35 cities for which records are available since 1910 are marked with asterisks.

Cumulative Record for First Half-Year, 1920-1930.—The following table gives the value of the building authorized by 61 cities during June and in the first six months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first six months of the same years are also given (average 1926=100):

Year	Value of permits issued in June	Value of permits issued in first six months	Indexes of value of permits issued first six months (1920=100).	Average indexes of wholesale prices of building materials in first six months. (1926 average=100).
	$	$		
1930.....	17,935,478	83,214,024	134·7	98·6
1929.....	27,816,592	124,609,267	201·8	99·6
1928.....	22,751,960	102,036,987	165·2	97·0
1927.....	18,363,239	80,842,719	130·9	96·6
1926.....	18,718,050	78,760,419	127·5	101·0
1925.....	14,915,884	65,899,717	106·7	103·1
1924.....	13,967,006	60,674,154	98·2	110·8
1923.....	14,286,252	73,047,496	118·3	111·4
1922.....	17,052,582	71,281,674	115·4	108·0
1921.....	14,240,934	55,771,684	90·3	132·0
1920.....	14,113,794	61,754,710	100·0	144·5

The aggregate for the first half of 1930 was lower by $41,395,243 or 33·2 per cent than in 1929, in which year construction authorizations reached their highest level in this record; the total for the first half of the present year, however, was 7·4 per cent above the six months' average of $77,467,883 recorded in the ten years, 1920-1929. The average index number of wholesale prices of building materials, moreover, has been lower this year than in most of the years since 1920.

Provincial Totals of Building Permits Issued.—Table II is a record by provinces of the building permits issued by 61 cities during the first six months of each year since 1921; it also shows the totals for the same years, the proportion that the six months' aggregates bear to the yearly totals, and the average index numbers of wholesale prices of building materials and of wages in the building trades.

All provinces except Prince Edward Island and New Brunswick reported smaller aggregates of building permits issued than in the first six months of last year; the increase of $1,414,750 or 159 per cent in the latter took place chiefly in Saint John. The New Brunswick total for the elapsed months of 1930 was the highest in the eleven years' record. Of the declines elsewhere indicated, that of $17,008,173, or 52 per cent, in the six cities of Quebec was most pronounced. How-

[1] Corrected figure for St. Thomas.

[2] Report not received.

ever, the record of contracts awarded, maintained by the *MacLean Building Review*, shows for Quebec a substantial increase in the first six months of 1930, as compared with 1929. This took place chiefly in the business and engineering building divisions, the latter of which very often represents work outside the cities.

During the first six months of this year, the 31 cities furnishing returns in Ontario reported 46·3 per cent of the total value of the building authorized, as compared with 37·0 in the same months of 1929. In Quebec, on the other hand, the proportion decreased from 26·3 per cent last year, to 19·0 in the elapsed months of 1930, and in British Columbia, from 13·1 per cent to 10·8 per cent.

Totals of Permits Issued by Four Leading Cities.—In Table III are given the aggregates of permits issued in the four largest cities in the first half of each year since 1921, together with the proportion that their totals are of the yearly and half-yearly totals for the 61 cities. The building authorized by these centres was valued at $40,534,761 in the first six months of 1930; this was 38·7 per cent lower than in the same months of last year and 17·2 per cent less than in 1928. With these two exceptions, however, the building authorized considerably exceeded the aggregate for any other year of the record, in most of which the cost of building materials was higher. The decrease in these four cities as compared with 1929 was rather greater than the general decline in the 61 cities, and the ratio to the total for the 61 cities was lower than in the preceding year.

Contracts Awarded.—According to the *MacLean Building Review*, the value of construction contracts awarded throughout the Dominion during the January-June period, 1930, was $240,626,000, as compared with $278,121,700 in 1929, $256,257,300 in 1928 and $191,323,800 in 1927. Of the total contracts awarded this year, $48,586,100 was classed as residential building, $82,722,900 as business, $18,451,500 as industrial, and $90,865,500 as engineering. In 1929, the total was divided as follows:—residential, $69,513,300; business, $94,255,300; industrial, $37,719,600 and engineering, $76,633,500. Thus the only increase as compared with the first half of 1929, was in the engineering class.

REPORT OF THE EMPLOYMENT SERVICE OF CANADA FOR THE PERIOD APRIL TO JUNE, 1930

EMPLOYMENT conditions, as indicated by the work of the Offices of the Employment Service of Canada, during the quarter April to June, 1930, were less favourable than those reported during the corresponding quarter of 1929, as there was a decrease of 27 per cent in the vacancies offered and of 26 per cent in the placements registered in regular and casual employment. All industrial divisions, except communication, showed

declines under each comparison, in which group a minor gain occured both in vacancies and placements. The heaviest losses recorded were in farming, manufacturing and construction and maintenance. Provincially, Nova Scotia registered a slight gain in vacancies and placements and New Brunswick a nominal increase in vacancies alone, while in all remaining provinces declines were shown under both comparisons. The accompanying table gives the vacancies and placements of the Employment Service of Canada by industrial groups in the various provinces during the period April to June, 1930.

From the chart on page 946 which accompanies the article on the work of the Employment Offices for the month of June, it will be seen that the trend of the curve of

vacancies and of placements in relation to applications was slightly upward during the month of April, but for the remaining two months of the quarter projected downward, with the exception of a slight upward variation of less than 1 per cent shown in the vacancy curve during the first half of May and again during the first half of June. Both curves throughout the quarter under review were on considerably lower levels than those recorded during the corresponding quarter of last year.

During the period April to June, 1930, there was a ratio of 66·9 vacancies and 62·7 placements for each 100 applications for employment, as compared with 84·5 vacancies and 77·9 placements during the corresponding period a year ago. The average number of positions offered daily during the quarter under review was 1,190, of applicants registered 1,778, and of placements effected 1,116, in contrast with a daily average of 1,615 vacancies, 1,911 applications and 1,489 placements in regular and casual employment during the same quarter of 1929.

During the three months April to June, 1930, the Offices reported that they had made 86,352 references of persons to positions and had effected a total of 82,527 placements of which 46,497 were in regular employment and 36,030 in casual work. Of the placements in regular employment 34,322 were of men and 12,175 of women, while casual work was found for 20,905 men and 15,125 women. A comparison with the same period of 1929 shows that 111,670 placements were then made, of which 72,634 were in regular employment and 39,036 in casual work. Applications for employment during the period under review were received from 91,535 men and 40,012 women, a total of 131,547, in contrast with the registration of 143,283 persons during the same period of 1929. Employers notified the Service during the quarter April to June, 1930, of 88,020 vacancies of which 56,571 were for men and 31,449 for women, as compared with 121,094 opportunities for work offered during the corresponding period a year ago.

In another section in this issue will be found a report in detail of the transactions of the Employment Offices for the month of June, 1930.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during June is reproduced below. The following report on employment conditions in the United States is based on the information published by the United States Department of Labour, giving statistics showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for June, 1930, and previous months are reproduced below.

Great Britain

There was a further decline in employment during June. A further substantial increase in the numbers unemployed occurred in the coal-mining, shipbuilding and marine engineering, motor vehicle, and cotton industries. Unemployment also increased in the following industries:—pottery, tinplate manufacture, engineering, the metal trades, the textile industries [with the exception of hosiery] tailoring, boot and shoe manufacture, and paper-making. On the other hand, there was improvement in the slate quarrying, food and drink, hosiery and distributive trades, and in the hotel and boarding-house, road transport, shipping, and dock and harbour services.

Among the workpeople, numbering approximately 12,100,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at June 23, 1930 (including those temporarily stopped as well as those wholly unemployed) was 15·8, as compared with 15·3 at May 26, 1930, and with 9·6 at June 24, 1929. The percentage wholly unemployed at June 23, 1930, was 11·1, the same percentage as at May 26, 1930, while the percentage temporarily stopped was 4·7 as compared with 4·2. For males alone the percentage at June 23, 1930, was 15·9, and for females 15·4; at May 26, 1930, the corresponding percentages were 15·5 and 15·0.

On June 30, 1930,, the numbers of persons on the registers of Employment Exchanges in Great Britain and Northern Ireland were 1,214,270 wholly unemployed, 636,975 temporarily stopped and 95,384 normally in casual employment, making a total of 1,946,629. This was 123,397 more than a month before and 770,565 more than a year before. The total on June 30, 1930, comprised 1,390,144 men, 46,225 boys, 469,114 women and 41,146 girls.

United States

Employment in the United States decreased 1·8 per cent in June, 1930, as compared with May, 1930, and pay-roll totals decreased 2·7 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manufacturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executive and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of March and April, 1930, and therefore cannot be included in the general statement for the month of June. The number of employees of Class I railroads as at April 15 totalled 1,555,692, representing an increase of 1·7 per cent since March 15, 1930. The amount of pay-roll in the entire month of April was $217,704,996, representing a decrease over the previous month of 0·6 per cent.

Employment in manufacturing industries decreased 2·5 per cent in June as compared with May, and pay-roll totals decreased 4 per cent. These per cents of change in June in employment and in earnings are based upon returns made by 13,375 establishments in 54 of the principal manufacturing industries of the United States. These establishments in June, 1930, had 3,172,039 employees whose combined earnings in one week were $83,275,-148.

The bureau's weighted index of employment in June, 1930, is 85·5, as compared with 87·7 for May, 1930, 89·1 for April, 1930, and 98·8 for June, 1929; the index of pay-roll totals for June, 1930, is 84·1, as compared with 87·6 for May, 1930, 89·8 for April, 1930, and 102·8 for June, 1929. The monthly average for 1926 equals 100.

The food group alone showed both increased employment and earnings in June as compared with May, the tobacco products and the nonferrous metals groups reporting increased pay-roll totals coupled with decreases in employment. The vehicle group showed the greatest decrease in both items (4·9 per cent in employment and 8·4 per cent in earnings), due largely to decreased operations in the automobile industry.

Twelve of the fifty-four separate industries reported increased employment and 18 industries showed increased earnings in June. The greatest increases in employment were: Men's clothing, 3·9 per cent; slaughtering, 2·9 per cent; cement, 2·4 per cent; and woollen and worsted goods, 2·3 per cent. The ice-cream industry reported a seasonal increase of 1·6 per cent in employment and baking reported a gain of 1·1 per cent in number of employees. Smaller increases were reported in flour, cast-iron pipe, structural ironwork, paper boxes, chewing and smoking tobacco, and automobile tires.

The greatest decrease in employment from May to June were seasonal ones of 26·1 and 14·5 per cent in fertilizers and agricultural implements, respectively. The automobile industry decreased 6·8 per cent in employment and 12·2 per cent in earnings in June as compared with May. The iron and steel industry reported 3·3 per cent fewer employees and decreased earnings of 5·5 per cent. Foundries decreased 2·8 per cent in employment and cotton-goods establishments reported a loss of 3·2 per cent in employment in June as compared with the previous month.

Employment statistics concerning six additional manufacturing industries are collected and published in the bureau's monthly employment survey, but the data are not yet included in the bureau's indexes. Of these six industries, radio alone showed improved employment conditions over the month period, a gain of 11·4 per cent in employees and an increase of 7·5 per cent in pay-roll totals. The five remaining industries—aircraft, jewelry, paint, rayon, and rubber goods—reported decreases in employment ranging from 1 to 3·3 per cent.

The Mountain geographic division alone had more employees in June than in May, the eight remaining divisions reporting decreased employment ranging from 3·7 per cent in the East South Central division to 1·1 per cent in the Pacific division. The East North Central division, which is most affected by the changing conditions in the automobile industry, reported a decrease of 3·4 per cent in employment, and a decrease of 6·1 per cent in pay-roll totals. Decreased earnings were also reported in seven of the remaining eight geographic divisions, the West South Central being the only division which did not show a decline in pay-roll totals over the month period.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labour, indi-

cate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent; April, 1930, 21 per cent; May, 1930, 20 per cent; June, 1930, 20 per cent; July, 1930, 21 per cent.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30 last. The text of this measure appeared in the April issue at page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(*a*) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(*b*) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

Section 5 of the Fair Wages and Eight-Hour Day Act authorized the Governor in Council, on the recommendation of the Minister of Labour, to make necessary regulations under the Statute. These regulations have not yet been made. The Act, however, was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900 and is now expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924, requires that "all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, drydocks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed for the character or class of work in which they are

respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay to any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addresses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of

default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are specially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Plastering Officers' Block, Wellington Barracks, Halifax, N.S. Name of contractors, S. A. Marshall & Son, Halifax, N.S. Date of contract, July 12, 1930. Amount of contract, approximately $4,424. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Plasterers	$1 00	8
Labourers, skilled	0 45	8
Labourers, common	0 40	8

Construction of buildings, light railways, drainage, etc., at the Magazines, Bedford Basin, N.S. Name of contractors, Messrs. MacMillan & MacNearney, Halifax, N.S. Date of contract, July 26, 1930. Amount of contract, $69,400. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week
Bricklayers	$1 00	8	44
Plasterers	1 00	8	44
Carpenters	0 73	8	44
Painters	0 73	8	44
Sheet metal workers	0 85	8	44
Plumbers and steamfitters	0 85	8	44
Mechanics helpers	0 45	8	44
Common labourers	0 40	8	48
Skilled labourers	0 45	8	48
Mastic floor layer	1 00	8	48
Mastic floor joint cutter	0 80	8	48
Kettleman	0 65	8	48
Asphalt labourers	0 45	8	48
Drillers	0 50	8	48
Driver horse and cart.... (per day)	4 50	8	48
Driver team and wagon... "	7 00	8	48

Overtime may be permitted in case of necessity on the basis of time and one-half.

Exceptions to the 8-nour day and overtime provisions will be recognized in preparatory and complementary work.

Installation of plumbing and plumbing fixtures, North Wing, Soldiers' Block, Wellington Barracks, Halifax, N.S. Name of contractors, Powers Bros., Ltd., Lunenburg, N.S. Date of contract, July 26, 1930. Amount of contract, $8,740. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week
Plumbers	0 90	8	44
Steamfitters	0 90	8	44
Helpers	0 45	8	44
Labourers	0 40	8	48
Horse cart and driver.... (per day)	5 00	8	48
Team wagon and driver.. "	7 00	8	48

Overtime may be permitted in case of necessity on the basis of time and one-half.

Exceptions to the 8-hour day and overtime provisions will be recognized in preparatory and complementary work.

Electric wiring, Soldiers' Block, Wellington Barracks, Halifax, N.S. Name of contractors, Messrs. Arthur & Conn, Ltd., Halifax, N.S. Date of contract, July 26, 1930. Amount of contract, $3,400. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Electricians	0 90	8
Carpenters	0 80	8
Masons	1 15	8
Labourers, skilled	0 45	8
Labourers, common	0 40	8

Electric wiring, Officers' Block, Wellington Barracks, Halifax, N.S. Name of contractors, Cragg Bros. & Co., Ltd., Halifax, N.S. Date of contract, July 26, 1930. Amount of contract, $3,225. The same fair wages schedule was inserted in this contract as in the preceding one.

Construction of recreation grounds at Esquimalt, B.C. Name of contractors, Messrs. Knott & Jones, Victoria, B.C. Date of contract, July 30, 1930. Amount of contract, $8,480. The General Fair Wages Clause was embodied in the contract.

Grading at Aerodrome, Trenton Airport, Trenton, Ont. Name of contractor, Mr. J. J. McNab, Trenton, Ont. Date of contracts awarded during the month of July totalling $37,174.13. The General Fair Wages Clause was embodied in the contract.

Laying tile underdrain at the Trenton Airport, Trenton, Ont. Name of contractors, J. J. McNab, Trenton, Ont. Date of contract, July 30, 1930. Amount of contract, $3,982.25. The General Fair Wages Clause was inserted in the contract.

Department of Public Works

Contracts in Group "A" (Construction, etc.)

Construction of two timber stone-filled mooring ribs and necessary connecting rafts at Collingwood, Ont. Name of contractors, William and Cornelius J. Birmingham, Kingston, Ont. Date of contract, July 5, 1930. Amount of contract, approximately $35,727.96. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Labourers	$0 45	8
Carpenters	0 75	8
Steam derrick engineers	0 80	8
Concrete mixer engineer	0 75	8
Firemen	0 45	8
Blacksmiths	0 65	8
Blacksmiths' helpers	0 45	8
Diver	1 00	8
Machinists	0 75	8

Overtime—Will be permitted in case of necessity of time and one-half.

P.S.—In connection with the rates for Carpenters and Joiners, this rate is to apply to all form building, crib work, etc.

Exceptions to the 8-hour day and overtime provisions will be recognized in preparatory and complementary work.

Construction of a rubble mound breakwater at Little Cataraqui Bay, Kingston, Ont. Name of contractors, Canadian Dredging Co., Ltd., Midland, Ont. Date of contract, July 7, 1930. Amount of contract, approximately, $200,312.50. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week
Carpenters	$0 90	8	44
Blacksmiths	0 60	8	48
Drillers	0 55	8	48
Helpers	0 45	8	48
Engineer—stationary hoist	0 85	8	48
Firemen	0 50	8	48
Labourers	0 40	8	48
Teamsters, team & wagon (per day)	6 50	8	48
Truck drivers	0 45	8	48
Derrickmen	0 55	8	48
Powdermen	0 50	8	48
Concrete mixer runner	0 50	8	48

Overtime may be permitted in case of necessity on the basis of time and one-half.

Exceptions to the 8-hour day and overtime conditions will be recognized in preparatory and complementary work.

Construction of a concrete fill and mastic floor at the Armoury, Brockville, Ont. Name of contractors, W. A. Moffat & Sons, Ltd., Toronto, Ont. Date of contract, June 30, 1930. Amount of contract, approximately $4,490. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week

Making and Repairing Rubber Stamps, Daters, etc.	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	192 07
Making up and Supplying Letter Carriers' Uniforms	
Miner Rubber Co., Ltd., Granby, P.Q.	771 75
Wm. Scully, Ltd., Montreal, P.Q.	2,629 20
Pollack & Dorfman, Quebec, P.Q.	9,286 00
E. Guillet & Sons Co., Marieville, P.Q.	105 18
J. E. Lortie, Montreal, P.Q.	395 62
Hamilton Uniform Cap Co., Hamilton, Ont.	72 50
J. A. Humphrey & Son, Moncton, N.B.	5,499 48
Mail Bag Fittings	
Walter H. Wickware, Ottawa, Ont.	6,682 50
Parmenter & Bullock Co., Ltd., Gananoque, Ont.	115 83
Ontario Equipment Co., Ottawa, Ont.	1,030 20
Interprovincial Equipment Co., Ottawa, Ont.	12,221 00
Scales	
Pritchard-Andrews Co., Ltd., Ottawa, Ont.	904 05
Letter Boxes, etc.	
Pritchard-Andrews Co. of Ottawa, Ltd. (Locks)	808 00
Stamping Ink, etc.	
Pritchard-Andrews Co. of Ottawa, Ltd., Ottawa	34 20
J. E. Poole Co., Toronto, Ont.	38 76
Satchels	
Woods Mfg. Co., Ottawa, Ont.	299 85

Fair Wages Conditions in Harbour Commission Contracts

Under the Fair Wages Order in Council it is provided that certain conditions, referred to therein as "A" conditions, shall, as far as practicable, be observed by the department or departments of Canada, in connection with all agreements made by the Government involving the grant of Dominion public funds in the form of subsidy, advance, loan, or guarantee for any of the purposes mentioned." Under this authority, fair wages conditions are prepared from time to time in the Department of Labour for insertion in contracts awarded by the Harbour Commissions throughout Canada. The labour conditions in question are similar to those which are applicable to contracts awarded by the several departments of the Dominion Government and take the form of either the General Fair Wages Clause or a fair wages schedule.

Returns have been received in the Department of Labour showing that the following construction contracts have been executed recently by Harbour Commissions to which fair wages conditions applied:—

Halifax Harbour Commissioners

Construction of Pier 5, Halifax, N.S. Name of contractors, The Standard Construction Co., Ltd., Halifax, N.S. Date of contract, June 20, 1930. Amount of contract, $457,963. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week

Pipefitters	0 90	8	44
Cement finishers	0 60	8	48
	per day		
Horse cart and driver	4 50	8	48
Team wagon and driver	6 50	8	48

Supplying and laying of Vulcan Asphalt mastic flooring in Transit Shed No. 28, Ocean Terminals, Halifax, N.S. Name of contractors, F. S. Coombs & Co., Halifax, N.S. Date of contract, June 16, 1930. Amount of contract, $11,088. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week
Mastic floor layer	$1 00	8	48
Mastic floor joint cutter	0 80	8	48
Kettleman	0 65	8	48
Asphalt workers (labourers)	0 45	8	48

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Food, Drink and Tobacco

Toronto, Ontario.—Certain Employers (Jewish) and the Bakery and Confectionery Workers' International Union, Local No. 181.

Agreement to be in effect from May 1, 1930, to May 1, 1931.

Only members of local union to be employed, if any available.

Hours: 8 per day, a 48-hour week.

Wages per week: foreman $50, second hand $46, third hand $42. Substitutes, known as jobbers who are temporarily employed for one or more nights per week to be paid as follows: foreman $1.05 per hour, second hand 95 cents per hour, third hand 87½ cents per hour.

Overtime: No employee will be requested to work overtime. No work to be done on Jewish holidays but wages for such holidays will be paid at regular rates.

A labourer must not be employed at baker's work.

The union label must be put on each loaf of bread; but if in case of any dispute the

employer refuses to accept the award of the impartial chairman or of arbitration, the union label will then be forfeited by the employer.

A union representative will have the right to enter the shop at any time.

All disputes will be referred to an impartial chairman who shall be appointed by mutual consent and his decision shall be binding. If this chairman is not appointed or is unable to act, any dispute will be referred to three arbitrators, a representative of each party and a third chosen by them, the decision of such board to be final and binding. Such arbitration will be conducted as provided by the Trades Disputes Act (Revised Statutes of Ontario, 1927, chapter 178).

CALGARY, EDMONTON AND LETHBRIDGE, ALBERTA.—THE BREWERIES OF ALBERTA AND THE INTERNATIONAL UNION OF THE UNITED BREWERY, FLOUR, CEREAL AND SOFT DRINK WORKERS OF AMERICA, LOCALS NOS. 124 (CALGARY), 314 (EDMONTON), AND 354 (LETHBRIDGE).

Agreement to be in effect from April 1, 1930, to March 31, 1932. If either party desires a change, they will give notice 30 days before the expiration date. The brewers agree to meet a negotiating committee on the week prior to the expiration date.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE, December, 1928, page 1375, with certain minor changes, among them the following:

Hours: from May 1, to January 1, 9 per day with 5 on Saturdays; from January 1, to April 30, 8 per day and 4 on Saturdays.

The breweries will arrange meetings at least every three months between the management and the executive of the local unions for the purpose of closer co-operation in observing the different sections of the agreement.

Wages: first brewhouse man 81¼ cents per hour, rinsing machine men with inspection 71⅝ cents per hour. The wages of employees of the soft drink department and of truck drivers' helpers have been omitted.

Union men will be paid wages for legal holidays.

Manufacturing: Pulp, Paper and Paper Products

THOROLD, ONTARIO.—THE ONTARIO PAPER COMPANY, LIMITED, AND THE INTERNATIONAL BROTHERHOOD OF PAPER MAKERS, THE INTERNATIONAL BROTHERHOOD OF PULP, SULPHITE AND PAPER MILL WORKERS, THE INTERNATIONAL BROTHERHOOD OF STATIONARY FIREMEN, THE INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, THE INTERNATIONAL ASSOCIATION OF MACHINISTS, THE UNITED BROTHERHOOD OF CARPENTERS, THE INTERNATIONAL UNION OF STEAM AND OPERATING ENGINEERS.

Agreement to be in effect from May 1, 1930, to May 1, 1931.

Only union members to be employed if available. Any non-union men employed must join the union within 15 days. If any question of jurisdiction arises, it will be decided by the American Federation of Labour.

Hours: paper mills may operate six days per week from 8 a.m. Monday to 8 a.m. Sunday; pulp mills may operate six or six and one-half days per week when pulp is needed, and a longer period when mutually satisfactory. Hours for day workers 8 per day from 8 a.m. to 12 noon and from 1 p.m. to 5 p.m. Teamsters to work 8 hours per day and do stable work outside this period. They will be paid for 8¾ hours. Stable man to work 10 hours and be paid for 11 hours work. Tour workers to work 8-hour continuous shifts. There are three shifts, one from 8 a.m. to 4 p.m., the next from 4 p.m. to 12 midnight, the third from 12 midnight to 8 a.m. Shift to rotate in sequence weekly.

Overtime: for day workers all overtime and work on Sundays and three holidays, time and one-half. A day worker called after regular working hours to do repair work will receive at least four hours' pay. Tour workers required to work overtime at other than tour work will be paid time and one-half. Tour workers putting on wires at a time other than their regular shift will receive 6 hours' pay for such work. If required to put on a wire before this shift begins or continue such work after their shift ends, they will be paid for time so worked and one hour's pay extra. Work done by tour workers on Sundays and three holidays, time and one-half. All vacancies to be filled within two weeks, or, if they are not filled after two weeks, the men working overtime will be paid time and one-half.

Employees may be immediately discharged for certain specified reasons.

The observance of certain safety rules are included in the agreement.

Any grievances will be reported by the union to the Superintendent. If his decision is unsatisfactory, the matter will then be taken up by an executive officer of the company and the international union representative. If they are unable to agree, the dispute will then be referred to arbitration, the company selecting one man, the union another and these two to choose a third party; the decision of this board will be final and binding.

The following wage scale is paid at these mills but provision is made in the agreement for the right to put into effect any working conditions or wage schedule contained in any award or agreement between the organizations signing the agreement and certain other newspaper manufacturers.

Wages per hour: Ground wood mill: repairmen 74 cents, repairmen helpers 59 cents, stone sharpeners 65 cents, carriers 48 cents, oilers 54 cents, grindermen 55 cents, screenmen 54 cents, waste 45 cents, wood puller 48 cents, cleaners 45 cents, pressmen 50 cents, test clerks 68 cents. Mixing Room: head beatermen $1.02, beatermen 52 cents, mixers 52 cents. Machine room: machine tenders $1.35 to $1.44, back tenders $1.15 to $1.24, spare hand $1, third hands 86 to 92 cents, fourth hands 70 to 74 cents, fifth hands 67 cents, oilers 55 cents, cleaners 49 cents. Sulphite Mill: cooks 80½ cents, cook's helpers 58 cents, acid makers 75 cents, head screenmen 68 cents, screenmen 54 cents, stonemen 58 cents, head millwright $1.13, second millwright 76 cents, millwright helper 62 cents, cleaner 45 cents, labourers 45 cents. Wrapper Machine: machine tenders 78 cents, helpers

63 cents, second helper 49 cents. Finishing Room: assistant head finisher 72½ cents, weighers 63½ cents, finishers 52 cents, head loaders 62½ cents, loaders 52 cents, coremen 52 cents, shipping clerk 64 cents, test clerks 64 cents, cutter operator 62½ cents, inspector of finished rolls 55 cents, electric truckers 60 cents. Large Supercalender and Winder: operators 80 cents, large windermen 74 cents, helpers 60 cents. Small Supercalender: head operator 80 cents, operator 78 cents, operator helpers 55 cents. Small rewinders: windermen 71 cents, windermen helpers 55 cents. Steam Plant: head firemen 75 cents, second firemen 64 cents, labourers 53 cents, mason $1, mason labourers 54 cents. Turbines: head operator 85 cents, second operator 76 cents. Paint Shop: painters 76 cents, painters' helpers 60 cents. Bull Gang: foreman 78 cents, labourers 63½ cents. Electrical Department: first electrician $1.13, second electrician 84 cents, third electrician 78 cents, fourth electrician 75 cents, electricians' first helper 66 cents, electricians' second helper 59 cents, electricians' third helper 51 cents, maintenance men 75 cents, operators 75 cents. Brown Hoist: engineers 85 cents, firemen 54 cents, dinkey engineer 77 cents, dinkey fireman 54 cents, switchmen 67 cents, derrick runners 80 cents, dock fireman 63½ cents, crane operators 60 cents. Machine Shop: machinist 89 cents, machinist helpers 66 cents, head machinist $1, roll grinder 89 cents, second machinist 72½ cents, first blacksmith 86 cents, blacksmith helper 62 cents. Millwrights: foreman $1.13, assistant foreman 96 cents, belt man $1.09, pattern makers 92 cents, first millwright 89 cents, second millwright 76 cents, night millwright 72 cents, millwright helpers 62 cents, millwright apprentice 45 cents. Basement: head oiler 76 cents, assistant head oiler 62 cents, oiler 54 cents, night oiler 56 cents, sweeper 49 cents. Steam Fitters: foreman $1, steamfitters-first 82 cents, second steamfitter 71 cents, night steamfitter 71 cents, steamfitters' helpers 64 cents. Wood Room: day foreman 73 cents, night foreman 63 cents, oilers 54 cents, chipperman 62 cents, drum barker men 52 cents, cleaners 49 cents, bark press labourers 52 cents.

Manufacturing: Printing and Publishing

ST. JOHN, N.B.—A CERTAIN DAILY NEWSPAPER PUBLISHER AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 85.

Agreement to be in effect from May 1, 1930, to May 1, 1932, and for such time thereafter not exceeding thirty days as may be required for the negotiation of a new agreement. If notice is not given of any change, the agreement will continue in force from year to year.

Union members only to be employed if available.

Hours: 8 per day for day work and 7½ for night work.

Overtime: all overtime and work on three holidays time and one half; Sundays to be paid at double time.

Wages per week: from May 1, 1930, to April 30, 1931, foremen, linotype operators and machinists $38 for day work and $41 for night work, floorman $36 for day work, $39 for night work; from May 1, 1931, to April 30, 1932, foremen, linotype operators and machinists $39 for day work and $42 for night work, floormen $37 for day work and $40 for night work.

No piece work allowed.

Apprentices to serve five years. One apprentice allowed for every six journeymen and not more than three in any office. Apprentices must complete the course in printing of the international office and will undergo regular examinations before the local committee.

Wages for apprentices; third year two fifths of journeyman's pay, fourth year one half, fifth year two thirds.

The foreman to hire all help required.

Any dispute which cannot be settled between the employer and a committee of two from the office, will be referred to an arbitration committee, consisting of one member of each party and a third chosen by them, the decision of such board to be final and binding.

SAINT JOHN, N.B.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 85.

Agreement to be in effect from May 1, 1930, to May 1, 1931, and from year to year thereafter until either party gives notice of change 60 days prior to expiration date.

This agreement is the same as that between the newspaper publisher and this local union summarized above, with the following exceptions:

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Wages per week: foremen, linotype operators and machinists $35.20, floor hands and monotype keyboard operators $33, monotype casters, $36.

HAMILTON, ONTARIO.—PUBLISHERS OF TWO DAILY NEWSPAPERS AND THE INTERNATIONAL PRINTING PRESSMEN AND ASSISTANTS' UNION, LOCAL NO. 176.

Agreement to be in effect from January 1, 1930, to December 31, 1932.

This agreement renews the agreement previously in effect and summarized in the LABOUR GAZETTE, December, 1928, page 1376, with the following changes:

Wages per week for journeymen pressmen: for the year 1930, $42.25, for the year 1931, $42.50, for the year 1932, $42.75.

Wages per week for apprentices: for the year 1930, $14.60, for the year 1931, $14.70, for the year 1932, $14.80 with an increase in wages of $2 per week every year of apprenticeship term.

The Christmas bonus of one week's wages is abolished.

Construction: Buildings and Structures

GENERAL CONTRACTORS SECTION OF THE SASKATOON BUILDERS' EXCHANGE AND THE BRICKLAYERS AND MASONS' INTERNATIONAL UNION NO. 3 OF SASKATCHEWAN.

Agreement to be in effect from May 1, 1930 to April 30, 1931.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE, August, 1929, page 926.

PRICES, RETAIL AND WHOLESALE, IN CANADA, JULY, 1930

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month continued toward lower levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being considerably lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was $10.91 at the beginning of July, as compared with $11.10 for June; $10.98 for July, 1929; $10.80 for July, 1928; $10.92 for July 1927; $11.07 for July, 1926; $10.49 for July, 1925; $9.91 for July, 1924; $10.17 for July, 1923; $10.27 for July, 1922; $10.96 for July, 1921; $16.92 for June, 1920 (the peak); $13 for July, 1918; and $7.42 for July, 1914. The prices of beef, mutton, pork, butter, cheese, bread, flour, prunes, sugar and potatoes were lower. The only advance occurred in the price of eggs. Including the cost of fuel and rent with that of foods the total budget averaged $21.26 at the beginning of July, as compared with $21.44 for June; $21.26 for July, 1929; $21.01 for July, 1928; $21.10 for July, 1927; $21.30 for July, 1926; $20.70 for July, 1925; $20.30 for July, 1924; $20.65 for July, 1923; $20.67 for July, 1922; $21.53 for July, 1921; $26.92 for July, 1920 (the peak); $20.66 for July, 1918; and $14.17 for July, 1914. Fuel and rent showed little change.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again substantially lower at 85.8 for July, as compared with 88 for June; 96 for July, 1929; 96.2 for July, 1928; 98.5 for July, 1927; and 100.1 for July, 1926. One hundred and thirty-one prices quotations were lower, sixteen were higher and three hundred and fifty-five were unchanged.

In the grouping according to chief component materials six of the eight main groups declined. These were: the Vegetables and Vegetable Products group, due to lower prices for grains, flour, rubber and sugar; the Animals and their Products group, because of lower prices for steers, hogs, lambs, fresh meats, milk and butter; the Fibres, Textiles and Textile Products group, because of lower prices for cotton, silk and worsted cloth yarns; the Wood, Wood Products and Paper group, due to declines in the prices of certain lines of lumber; the Non-Ferrous Metals group, because of lower quotations for antimony, copper and zinc, which more than offset a slight advance in the price of silver; and the Chemicals and Allied Products group, because of reduced quotations for bleaching powder, red lead and shellac. The Iron and its Products group and the Non-Metallic Minerals group were unchanged.

In the grouping according to purpose consumers' goods were slightly lower, due mainly to declines in the prices of silk fabrics, wool yarns, flour, potatoes, coffee, milk and butter. A substantial decline occurred in producers' goods, due to lower prices for building and construction materials and for materials for the textile and clothing industries, for the furs and leather goods industries, for the metal working industries, for the chemical using industries, for the meat packing industries, for the milling and other industries, as well as for miscellaneous producers' materials.

In the grouping according to origin raw and partly manufactured goods showed a sharp decline due to lower prices for grains, raw sugar, potatoes, raw cotton, livestock, milk, raw silk, copper and zinc, which more than offset higher prices for eggs, salt herrings, halibut and silver. Fully and chiefly manufactured goods also declined, because of lower quotations for flour, refined sugar, butter, cheese, silk fabrics, wool yarn, copper wire bars, bleaching powder and rayon yarn. Articles of farm origin, of marine origin, of forest origin and of mineral origin were also lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of July, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

(Continued on page 978)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

* Prior to 1926 number of commodities was 236.

(Continued from page 970)

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the LABOUR GAZETTE since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises

or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the Labour Gazette a table of percentages of changes in the cost of living since 1913 as a tenative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the Labour Gazette, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1928, and monthly since January, 1929. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141·4; 1905; 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.3; 1930, 65.5.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318) and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

Beef prices, which had advanced since the beginning of the year, showed a downward movement in July, sirloin steak averaging

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

37.5 cents per pound, as compared with 38 cents in June; round steak 32.4 cents per pound in July and 32.9 cents in June; rib roast 28.8 cents per pound in July and 30.8 cents in June; and shoulder roast 23.4 cents per pound in July and 24.3 cents in June. Prices were lower in most localities. Mutton was down from an average price of 31.9 cents per pound in June to 30.8 cents in July. Pork was also lower, fresh averaging 30.1 cents per pound in July, as compared with 30.8 cents in June, and salt averaging 26.9 cents per pound in July and 27.2 cents in June.

Eggs showed a slight seasonal advance, fresh being up from 35.6 cents per dozen in June to 36.2 cents in July and cooking from 31.7 cents per dozen in June to 32.7 cents in July. Milk was unchanged at an average price of 12 cents per quart. Butter was lower in most localities, dairy being down from 34.8 cents per pound in June to 32.9 cents in July and creamery from 38.7 cents per pound in June to 36.3 cents in July. Cheese was down in the average from 32.6 cents per pound in June to 31.6 cents in July.

Lower prices for bread were reported from Amherst, Oshawa, Toronto, Medicine Hat, New Westminster and Vancouver. Flour was slightly lower at an average price of 4.8 cents per pound. Onions advanced from 6.5 cents per pound in June to 6.8 cents in July. Potatoes were slightly lower, averaging $2.62 per ninety pounds, as compared with $2.71 in June. Prunes were down from an average price of 16.4 cents per pound in June to 15.9 cents in July. Granulated sugar was again slightly lower, averaging 6.7 cents per pound. Anthracite coal was practically unchanged at an average price of $16 per ton.

Wholesale Prices

The following is a summary of a statement on wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grains, for the most part were lower. No. 1 northern cash wheat, Fort William and Port Arthur basis was down from $1.032 per bushel in June to 95.1 cents in July. These prices compare with $1.178 per bushel in June of 1929 and $1.599 in July. The lower prices were said to be due mainly to higher crop estimates for 1930 than in the preceding year. Western barley was down from 39.3 cents per bushel to 39.2 cents; flax from $2.12 per bushel to $1.79; and western oats from 47.6 cents per bushel to 43.8 cents. American corn was slightly higher at 93.7 cents per bushel, as compared with 91.2 cents in June. Flour prices moved in sympathy with wheat, being down from $7.23 per barrel in June to

$6.83 in July. Bran and shorts also were lower, the former averaging $24.77 per ton, as compared with $27.21 in June, and the latter averaging $25.77 per ton, as compared with $29.21 in June. Raw sugar at New York was down from $1.563 per cwt. in June to $1.25 in July, while granulated at Montreal was also lower at $4.51 per cwt., as compared with $4.66 in June. The decline was said to be due to the large stocks available in Cuba and to the lessened consumption in the United States. The decline in raw rubber, in progress since the beginning of the year, continued, Ceylon at New York being down from 12.3 cents per pound in June to 11.2 cents in July. In livestock, good steers at Toronto declined from $9.47 per hundred pounds to $8.13 and at Winnipeg from $9.52 per hundred pounds to $7.95. Hogs at Toronto also were lower at $12.22 per hundred pounds, as compared with $12.42 in June, while at Montreal the price rose from $12.84 per hundred pounds to $13.17. Lambs at Toronto declined from $13.95 per hundred pounds to $12.22. The price of veal calves at Toronto was up from $9.72 per hundred pounds to $10.13 but at Winnipeg the price declined from $9.04 per hundred pounds to $8.88. In furs, weasel skins dropped from 92 cents—$1.20 each to 82 cents—$1.06; mink from $17.75—$28.50 per skin to $15.75—$22.25; and muskrat from 68-80 cents per skin to 54-80 cents. In butter, creamery prints at Montreal were slightly higher at 30.5 cents per pound, while at Toronto the price declined from 31.7 cents per pound to 30.9 cents. Fresh eggs at Montreal advanced slightly, but were practically unchanged in the average at Toronto. Raw cotton at New York fell from 14.4 cents per pound to 13.1 cents. Raw silk at New York was down from $4 per pound in June to $3.60 in July. In lumber, common birch was down from $90 per thousand board feet to $85; hemlock mill run from $24 per thousand board feet to $23; and cedar shingles from $2.80 per thousand to $2.15. Electrolytic copper at Montreal was down from $14.28 per hundred pounds to $13.30. American anthracite coal was slightly lower at $12.92 per ton in July.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest quarterly table giving wholesale and retail prices index numbers for various countries appeared in the Labour Gazette for July.

Great Britain

Wholesale Prices.—The Board of Trade index number, on the base 1924=100, was 72·6 for June, a fall of one per cent from May and of 11 per cent from the same month last year. As compared with May, cereals and meat and fish were lower, while other foods showed an advance of 3·6 per cent. Industrial materials were 1·5 per cent lower, decreases being shown in every group; the greatest fall was in textiles other than cotton and wool.

The *Statist* index number (in continuation of Sauerbeck's figures), on the base 1867-1877=100, was 95·8 at the end of June, which is 3 per cent lower than the previous month and 15·3 per cent lower than at June 30, 1929, and 21·8 per cent lower than for June 30, 1928. The following quotation is taken from the *Statist*, July 19, 1930: "The gap between the general level of wholesale prices as it was at the outbreak of the war and as it is to-day has been narrowed to a mere 18 per cent, yet the cost of living figure is still 55 per cent higher than that for July, 1914, while the index figure for retail food prices is 41 per cent above that for July, 1914. The discrepancy between wholesale and retail prices is thus still widening, as it must do in a period of rapidly falling prices."

As compared with prices at the end of May, 1930, all groups were lower at the end of June, with the exception of a slight advance in animal food.

Cost of Living.—The index number of the Ministry of Labour, on the base July, 1914=100, was 155 at July 1, showing an advance of one point over June 1. This advance was due to an increase in the food group, due chiefly to a seasonal advance in the price of potatoes and of higher prices for eggs and butter.

France

Wholesale Prices.—The index number of the General Statistical Office, on the base July, 1914=100, was 544 for June, as compared with 553 for May. Every group was lower than the previous month, with the single exception of an advance in animal foods.

COST OF LIVING.—The official index number of the cost of living, Paris, on the base 1914=100, was 572 for May, as compared with 565 for February. The advance was due to higher food prices than in the previous quarter, although the heat and light group was lower.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913 = 100, was 124·5 for June, a fall of one per cent from the previous month. With the exception of minor increases in animal foods, hides and leather and artificial fertilizers, all groups were lower than the previous month, the greatest declines being recorded in rubber, fodder and textiles.

COST OF LIVING.—The official index number of the cost of living, on the base 1913-1914 = 100, was 147·6 for June, an advance of 0·6 per cent over May. Advances in food, rent and sundries were partly counteracted by slight declines in heat and light and clothing.

New Zealand

WHOLESALE PRICES.—The index number of the Census and Statistics Office, on the base 1909-1913=1000, was 1537 for May, as compared with 1539 for April. Declines in textile manufactures, animal products, non-metallic minerals and their products and chemicals and manures were partly offset by an advance in metals and their products. Foodstuffs of vegetable origin and wood and wood products were unchanged.

COST OF LIVING.—The index number of the Census and Statistics Office, on the base July, 1914=1000, was 1585 for May, which is 7 points lower than in February. As compared with February, prices in May were lower for food, fuel and light and clothing, drapery and footwear, while miscellaneous commodities were slightly higher and rent was unchanged.

United States

WHOLESALE PRICES.—The index number of the Bureau of Labour Statistics, on the base 1926=100, was 86·8 for June, a fall of 2·7 per cent from the May level. Of the ten main groups of commodities, all were lower than in May with the exception of housefurnishing goods which was unchanged. The greatest fall in any one group occurred in farm products, which amounted to 4·4 per cent.

The *Annalist* index number, on the base 1913=100, was 123·0 for July, a fall of 4·3 per cent for the month. Every group was lower than in June, the greatest fall being in farm products.

Bradstreet's index number, showing the cost of a list of 106 commodities, was $10·4495 at August 1, a decline of one per cent from July 1, and of 17·2 per cent from August 1, a year ago, and is lower than any index number recorded since November 1, 1915. The following quotation is taken from *Bradstreet's,* August 9, 1930: "As to the matter of the extent to which this present decline has operated the percentages above given are illuminating. As to what may be thought as to the possible future course of all prices it might be well to point out that the decline of 1920-21 lasted from February 1, 1920, to July 1, 1921, during which period the Index moved 49 per cent lower in sixteen months, while rising a small fraction of 1 per cent in one other month during the decline. During the present price decline or from October 1, 1929, to August 1, 1930, there have been ten decreases, the sum total of these aggregating 17·2 per cent. As to the commodities declining from a year ago it may be said that seventy-nine are lower, against which there have been six advances while twenty-one are unchanged."

COST OF LIVING.—The index number of the Bureau of Labour Statistics, on the base 1913 =100, was 166·6 for June, a decline of 2·8 per cent from December, 1929. In this six month period, food declined 6·4 per cent, fuel and light 3·3 per cent, rents 1·5 per cent, clothing and house furnishing goods 1·0 per cent and miscellaneous items 0·3 per cent.

"The Canadian Mineral Industry in 1929" is the subject of a report recently issued by the Federal Department of Mines, (Mines Branch). This report summarizes each class of mining activity with respect to production, exports, imports, ores mined and producing localities, important developments and prospective producing localities, general situation and market conditions. The groups dealt with include: metals, non-metals, structural materials, and fuels.

The regulations under the Metalliferous Mines Regulations Act of British Columbia, which were outlined in the LABOUR GAZETTE, January, 1928, page 48, were amended by a provincial Order in Council dated July 9, 1930, the following clause being added to Rule 17:

"Straight, or ordinary, dynamite shall not be used underground."

This provision was effective as from August 11, 1930.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1930

THE number of fatal industrial accidents (including fatalities from industrial diseases included by workmen's compensation boards, etc., and also fatalities to persons incidentally to the pursuit of their occupations), which were recorded in the Department as occurring during the second quarter of 1930, was 402, there being 119 in April, 147 in May and 136 in June.

The report for the first quarter of 1930 was given in the Labour Gazette, May, page 601. In the second quarter of 1929, 367 fatal accidents were recorded (Labour Gazette, lists of fatal accidents on page 991 contain lists of fatal accidents on page contain 14 for the first quarter of 1930 and 7 for 1929. In this series of reports it is the custom to record industrial accidents under the dates of their occurrence, and fatal industrial diseases under the dates on which they prove fatal.

Reports were received from the provincial workmen's compensation boards, the Board of Railway Commissioners of Canada, and from certain other official sources; and from the correspondents of the Labour Gazette. Information as to accidents is also secured from newspapers.

Classified by groups of industries the fatalities occurring during the second quarter of 1930 were as follows: agriculture, 43; logging, 58; fishing and trapping, 12; mining, non-ferrous smelting and quarrying, 40; manufacturing, 43; construction, 95; electric light and power, 8; transportation and public utilities, 67; trade, 11; service, 25.

Of the mining accidents, 22 were in "metalliferous mining", 10 were in "coal mining", 4 in "non-metallic mineral mining and quarrying, n.e.s." and 4 in "structural materials."

Of the accidents in manufacturing, 5 were in "vegetable foods, drink and tobacco", 1 in "animal foods", 13 in "saw and planing mill products", 1 in "wood products", 2 in "pulp, paper and paper products", 10 in "iron, steel and products", 4 in "non-ferrous metal products", 3 in "non-metallic mineral products," and 4 in "chemical and allied products."

In construction there were 31 fatalities in "buildings and structures", 4 in "railway construction", 1 in "shipbuilding", 15 in "highway and bridge", and 44 in "miscellaneous construction."

In transportation and public utilities, there were 36 fatalities in "steam railways", 16 in "water transportation", 1 in "air transportation", 11 in "local transportation", and 3 in "telegraphs and telephones."

In trade there were 2 fatalities in "wholesale", and 9 in "retail."

Of the fatalities in service, 17 were in "public administration", 2 in "recreational", 1 in "laundering, dyeing and cleaning", 3 in "custom and repair", 1 in "personal and domestic", and 1 in "professional establishments."

The most serious disaster during the period under review occurred in the St. Lawrence River near Brockville, Ontario, on June 26; and resulted in the loss of thirty of a government drill boat crew who were engaged in deepening the channel and were blasting a shoal off Cockburn Island. Drilling operations had been practically completed and the drilled holes had nearly all been loaded preparatory to putting off the blast, when a bolt of lightning during a severe electric storm struck the drill boat and apparently ran down the lead wires of the loaded holes, causing a terrific premature explosion of the charges therein. The drill boat which was lying alongside of the drilled and explosive loaded area was so shattered by the explosion that it sank immediately and thirty of the crew lost their lives.

Five saw mill workers were drowned at Baker Brook, N.B., on May 4, when their boat capsized as it struck against some piling holding boom logs. Other accidents involving the loss of two or more lives were as follows:

On May 24, 4 men lost their lives on a farm at St. Zephyrin de Courval, Que., when a well caved in while they were removing cans of milk from it.

Two river drivers were drowned in the Montreal River, Ontario, on May 30 when the pointer in which they were shooting rapids struck a rock and capsized. Another two river drivers were drowned at Silver Centre, Ontario, on May 31, whole working on a log drive.

Three trappers fell through the ice of Peace River, Alberta, on April 4 and were drowned.

Two miners at Copper Mountain, B.C. succumbed to carbon monoxide poisoning on May 16, and two miners were asphyxiated by gas at Field, B.C. on June 7.

On May 5, four men engaged on highway and bridge construction lost their lives by falling 100 feet when the bench on which they were working collapsed while dismantling a bridge.

In steam railways transportation two sectionmen were killed near Tracey, N.B. on June 16 when a train collided with the speeder on which they were riding. On June 27 a train was derailed owing to swollen waters near Capreol, Ont., and the engineer and firemen lost their lives.

In water transportation, two workers on a tow boat near Quebec, Que., were asphyxiated by fumes from gasoline motors on May 11. Three electricians at Thorold, Ontario, were electrocuted on June 19, when a metal ladder which they were raising touched a high tension wire.

In public administration a fire station captain and fireman were killed at Ottawa, Ontario on May 19, when they fell with a collapsing wall and were burned in the fragments of a building during a fire.

Supplementary Lists of Accidents.—The supplementary list of fatal accidents occurring during the first quarter of 1930, to be found after the main table of accidents, contains 14 fatalities, of which 2 were in logging, 1 in mining, non-ferrous smelting and quarrying, 3 in manufacturing, 6 in transportation and public utilities, 1 in trade and 1 in service. One of these accidents occurred in January, 5 in February and 8 in March.

Concluding the lists is a supplementary list of fatal industrial accidents occurring during 1929. This includes 7 fatalities, of which 1 was in agriculture, 4 in logging, 1 in construction and 1 in trade. One of these accidents occurred in June, 1 in August, 1 in October, 1 in November and 3 in December.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1930

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCKRAISING—				
Farm hand	Near Erskine, Alta.	April 1	26	Struck on head by pulley during wood sawing operations.
Farmer	Near Smiths Falls, Ont.	" 2	.....	Struck by train when horse on which he was riding took fright.
Farmer	Near St. Charles de Mandeville, Que.	" 3	.....	Trampled by cow.
Rancher	Maple Creek, Sask.	" 4	50	Blown from roof of barn during wind storm.
Farmer	Ste. Rose, Que.	" 10	32	Drowned when his wagon broke through ice.
Farmer	Castor, Alta.	" 11	.....	Kicked by horse. Died April 15.
Farmer	Near Wheatley, Ont.	" 12	38	Struck by lightning.
Farmer	Carsonby, Ont.	" 15	79	Struck by auto.
Farmer	Near St. Neree, Que.	" 16	60	Crushed by falling tree.
Farmer	Girvin, Sask.	About April 24	61	Injured when team bolted. Died about April 30.
Farmer	Near Elphinstone, Man.	About April 24	.....	Dragged when his horses ran away.
Farmer	Near Brantford, Ont.	April 25	.....	Fell into well and drowned.
Teamster	Chase River, B.C.	" 30	.....	Collision of auto with horse drawn wooden roller which he was driving. Died May 6.
Farmer	Near Strathroy, Ont.	About April 30	30	Struck by lightning.
Farmer	Near Wardsville, Ont.	About May 2	69	Injured when he fell from load of hay. Died May 9.
Farmer	Taber, Alta.	May 3	28	Swept from his horse and drowned while herding cattle across swollen river.
Farm hand	Young, Sask.	About May 3	26	Crushed beneath land packer.
Farmer	Lytton, B.C.	May 5	56	Kicked on head by horse. Died May 6.
Fruit grower	Woodville, N.S.	" 6	43	Crushed under spraying outfit when his team ran away. Died May 12.
Farmer	Fraserville, Ont.	" 7	.....	Struck by lightning.
Farmer	Jasper, Ont.	About May 10	61	Injured when his team ran away. Died June 12.
Farmer	Near Napanee, Ont.	May 12	71	Fell from tractor and was run over.
Farmer	Lafleche, Sask.	" 12	.....	Burned in attempt to rescue his family from fire that destroyed his home.
Farmer	Near Preston, N.S.	" 14	.....	Pitched from wagon when horses ran away.
Farmer	Richmond Hill, Ont.	" 17	40	Fell from tractor.
Farmer	Near Stirling, Ont.	" 20	71	Injured when his team ran away.
Farmer's son	Near Angus, Ont.	" 20	22	Mangled by enraged bull.
Farmer's son	Near Maryland, N.B.	" 24	14	Fell from roller.
Farmer Farmer's son Farmer's son Farm hand	St. Zephyrin de Courval, Que.	" 27	....	Cave-in of ground around well from which they were removing cans of milk.
Farmer	Near Brussels, Ont.	" 27	70	Killed while blasting out stumps.
Rancher	Near Medicine Hat, Alta.	" 28	35	Accidental discharge of rifle.
Farmer	Near Lauder, Man.	" 31	.....	Horses bolted while hitching them to drill.
Farmer	Perkins' Mills, Que.	June 7	63	Kicked by horse. Died July 9.
Farmer's son	Near Tompkins, Sask.	" 10	16	Fell beneath his tractor.
Farmer	Belmont, Ont.	" 14	.....	Injured when his team of colts ran away.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCKRAISING—*Conc.*				
Farmer	Near Waterloo, Que	About June 19	.....	Injured while blasting stones.
Farm worker	Ralston, Ont	June 21	.....	Tongue of roller broke and machine passed over him.
Farmer's son	Near Port Hope, Ont	" 26	16	Struck by train while driving cows.
Farmer's son	Rockyford, Alta	" 26	16	Struck by lightning.
Farm hand	Near Port Coquitlam, B.C.	" 26	37	Tractor overturned on him while operating it in ditch.
LOGGING—				
Logger	Namakan River, Ont	April 1	.....	Drowned when team broke through ice.
Bucker	Wheatley, B.C	" 2	50	Struck by falling snag.
Logger	Alberni, B.C	" 4	21	Crushed by rolling log.
Loader	Alleo, B.C	" 6	28	Fell from bridge while loading logs. Died June 9.
Logger	Whonnock, B.C	" 7	17	Slipped under moving log. Died April 27.
Logger	Near Port Haney, B.C	" 7	30	Struck by falling tree.
Labourer	Diligent River, N.S	" 10	23	Crushed under haulage drum. Died April 12.
River driver	Queen's Co., N.B	" 13	47	Struck by log. Fractured skull.
Faller	Sooke Lake, B.C	" 15	31	Struck in abdomen by tree.
Logger	Deep Bay, B.C	" 19	23	Crushed between logs.
Boom man	Cortez Bay, B.C	" 20	39	Fell from boom and drowned.
Logger	Near North Bay, Ont	" 22	.....	Killed in logging accident.
Logger	Near Notre Dame de Laus, Que	" 24	40	Struck by falling tree.
Hooktender	Green Bay, B.C	" 25	28	Killed when main line broke.
Logger	Near Westminster, B.C	" 26	28	Fell 50 feet at camp. Broken back. Died June 8.
Logger	Port Haney, B.C	" 29	25	Log hit tree causing it to strike him on head while loading logs.
Logger	Lampriere, B.C	About May 7	42	Both legs broken in logging accident.
River driver	Laval Co., Que	May 8	34	Fell into river and drowned.
Bucker	Deep Bay, B.C	" 8	.....	Cut foot with axe. Infection. Died May 18.
Logger	Alberni, B.C	" 8	43	Struck by snag.
Labourer	Mile 80, T.N.O. Rly., Ont	" 9	.....	While erecting jammer it fell and crushed him.
Logger	Horne Lake, B.C	" 10	24	Struck on head by skyline while loading car.
River driver	Island Falls, Ont	" 11	37	Boat capsized while clearing log jam and he was drowned.
Logger	Sturgeon River, Ont	" 12	31	Crushed by rolling logs released from skidway.
Logger	Near Stoneham, Que	" 14	24	Crushed under falling tree.
Head loader	Near Duncan, B.C	" 14	25	Struck by block when spar tree broke.
River driver	Near Cochrane, Ont	About May 15	.....	Drowned when his boat was swamped after breaking up log jam.
Logger	Lake Cowichan, B.C	About May 17	45	Struck by falling snag.
River driver	Timmins, Ont	May 19	32	Drowned while crossing river in canoe above rapids.
Foreman	Near Brent, Ont	" 22	40	Injured while blasting log jam. Died May 23.
Logger	Near North Vancouver, B.C.	May 22	23	Log rolled over him.
Foreman	Nipissing River, Ont	" 23	40	Injured while blasting log jam.
Logger	Yarmouth Co., N.S	" 24	75	Struck by falling tree.
Loader	Reid Bay, B.C	" 26	19	Fell off duplex yarder.
Logger	Queen Charlotte Islands, B.C.	" 26	24	Killed in logging accident.
River driver River driver	Montreal River	" 30	17 18	Drowned when pointer in which they were shooting rapids struck a rock and capsized.
River driver River driver	Silver Centre, Ont	" 31	.....	Drowned while working on log drive.
River driver	Grassy River, Ont	About June 2	32	Drowned when his canoe was swept over falls.
Logger	Jervis Inlet, B.C	June 3	29	Struck on head by falling snag.
River driver	Kapuskasing, Ont	" 4	26	Fell into river and drowned.
Labourer	Mile 71, Ruel Sub., Ont	" 7	35	Fell into water and drowned while moving house boat.
Logger	Ocean Falls, B.C	" 10	33	Crushed by log. Died June 14.
Logger	Roseberg, B.C	" 11	29	Fell from boom and drowned.
Labourer	Midway, B.C	" 15	26	Drowned.
Hook tender	Jordan River, B.C	" 17	22	Struck by rolling log.
Logger	Ramsay Arm, B.C	" 17	24	Caught by log when signal wire broke.
Logger	Seymour Inlet, B.C	" 18	35	Fell into water and drowned when struck by snag.
Bucker	Quatsino Sound, B.C	" 18	62	Injured in logging accident.
Chokerman	Port Alberni, B.C	" 20	25	Struck on head by sapling.
Logger	Cedar Creek, Ont	" 20	25	Fell from log and drowned.
River driver	Devil River, Que	" 20	22	Slipped between two logs and drowned while clearing jam.
Logger	Ladysmith, B.C	" 23	24	Killed in logging accident.
Logger	Near Woodfibre, B.C	About June 24	.....	Struck by falling tree.
Chokerman	Theodosia Arm, B.C	June 25	25	Struck by haulback line.
River driver	Near Quebec, Que	" 25	15	Fell into river and drowned.
Logger	Kettle River, B.C	About June 28	.....	Drowned while on log drive.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
FISHING AND TRAPPING—				
Trapper	Near Sharbot Lake, Ont.	April 1	16	Wounded when his gun accidentally discharged.
Trapper Trapper Trapper	Peace River, Alta.	" 4		Fell through ice and drowned.
Trapper	Near Ingersoll, Ont.	" 8	25	Fell into river and drowned.
Trapper	Seine River, Ont.	About April 12		Drowned.
Fisherman	Chester, N.S.	May 3	63	Drowned while tending lobster traps.
Fisherman	Near Pugwash, N.S.	" 7	About 29	Drowned when his boat struck reef and capsized.
Fisherman	Near Lunenburg, N.S.	" 10	29	Drowned while hauling lobster traps.
Fisherman	Near Sandford, N.S.	" 14	15	Fell overboard and drowned while setting lobster traps.
Fisherman	Turtle Lake, Sask.	About May 27		Drowned when his boat capsized while drawing in nets.
Fisherman	Fraser River, B.C.	May 27		Fell from canoe while examining fish nets and drowned.
MINING NON-FERROUS SMELTING AND QUARRYING—				
Metalliferous Mining—				
Miner	Near The Pas, Man.	April 1	25	Fell down shaft.
Miner	Schumacher, Ont.	" 3	39	Silicosis. Laid off April 2, 1926.
Shaftman	Kirkland Lake, Ont.	" 9	24	Struck by falling rock. Died April 25.
Miner	Red Lake, Ont.	" 21	20	Fell from shaft cage.
Timberman	Michel, B.C.	" 25	40	Injured by falling rock. Died April 30.
Barnman	Kimberley, B.C.	" 30	28	Crushed by falling rock.
Miner	Porcupine, Ont.	About May 3	29	Fell down chute.
Miner	Timmins, Ont.	May 5	37	Crushed between two electric locomotives. Died May 5.
Mucker	Schumacher, Ont.	" 7	28	Struck by falling rock.
Manager	Near Beaverdell, B.C.	" 9	45	Struck on head by ore car. Died during operation.
Miner	Britannia Beach, B.C.	" 10	31	Injured by explosion in mine.
Miner Miner	Copper Mountain, B.C.	" 16	31 31	Carbon monoxide poisoning.
Miner	Frood, Ont.	" 17	23	Crushed by fall of earth.
Miner	Frood, Ont.	" 22	26	Carbon monoxide poisoning in mine.
Scaler	Timmins, Ont.	" 23	56	Struck by falling rock. Died May 24.
Shaft miner	Flin Flon, Man.	" 27	28	Struck by descending coaster balance in shaft and fell 650 feet.
Miner	Schumacher, Ont.	" 27	49	Silicosis. Laid off Sept. 1, 1928.
Shaftman	Kirkland Lake, Ont.	June 7	34	Spillage from hoisting bucket fell on him while working in winze. Died June 13.
Mucker Mucker	Field, B.C.	June 7	24 24	Asphyxiation from gas.
Miner	Copper Cliff, Ont.	" 11	27	Crushed by falling rock.
Coal Mining—				
Miner	New Waterford, N.S.	April 7	48	Crushed by fall of rock. Died April 26.
Painter	Glace Gay, N.S.	" 11	49	Crushed between fan blade and casing.
Miner	Cadomin, Alta.	" 24	43	Injured in mine shaft.
Manager of peat company.	Surrey, B.C.	May 2	35	Chest pierced by shaft. Died May 6.
Miner	Nanaimo, B.C.	" 26	40	Injured by fall of rock. Infection. Died May 30.
Miner	Glace Bay, N.S.	" 30	23	Crushed by fall of stone.
Miner	New Waterford, N.S.	June 2		Struck by fall of stone, Died June 5.
Rope rider	Bellevue, Alta.	" 20	21	Slipped from bumper of coal car while uncoupling rope from trip. Died June 21.
Mucker	Nanaimo, B.C.	" 23	34	Crushed under falling post.
Miner	Cumberland, B.C.	About June 30	34	Crushed by fall of rock.
Non-metallic mineral mining and quarrying, n.e.s.—				
Oil well worker	Near Calgary, Alta.	April 12	44	Explosion of gas stove.
Miner	Thetford Mines, Que.	May 6	40	Crushed by fall of rock.
Car loader	Thetford Mines, Que.	" 14	32	Struck by flying piece of loading machine when it broke.
Miner	Thetford Mines, Que.	" 19	28	Slipped and fell down shaft while cleaning rubbish from pit.
Structural Materials—				
Engine driver	Waterford, Ont.	June 7	23	Crushed by swinging crane.
Sand pit worker	Mountain Grove, Ont.	" 14	About 22	Buried by cave-in at sand pit. Died June 15.
Gravel pit worker	East Calgary, Alta.	" 19	30	Struck by scoop of gravel crusher.
Gravel pit worker	Louisburg, N.S.	" 25	55	Struck by tree stump when wall of gravel pit caved in.

Trade or Industry	Locality	Date	Age	Cause of Fatality
MANUFACTURING—				
Vegetable foods, drink, and tobacco—				
Baker	Brantford, Ont.	April 13	.....	Mangled when caught in bread mixing machine. Died April 14.
Worker in cereal plant	London, Ont.	May 15	40	Fell beneath freight car and was run over during switching operations.
Worker in bakery	Montreal, Que.	" 30	37	Fell into tank of boiling water.
Carpenter with packers.	Stratford, Ont.	" 11	65	Fell off platform while adjusting pulley. Died June 12.
Millwright at cannery.	Ladner, B.C.	" 28	42	Fell from ladder. Died June 29.
Animal Foods—				
Watchman at cannery.	Haysport, B.C.	June 8	.....	Drowned from boat during storm.
Saw and planing mill products—				
Engineer	Dollarton, B.C.	April 9	50	Crushed by fly-wheel when it rolled from its position.
Mill worker	Port Greville, N.S.	" 15	22	Caught in hauling chain.
Mill worker	St. Thomas de Caxton, Que.	" 19	53	Fell on circular saw.
Mill worker	Baker Brook, N.B.	May 4	41 31 37	Drowned when their boat capsized when it struck against piling holding boom logs.
Mill worker				
Mill worker				
Mill worker				
Planer feeder	Vancouver, B.C.	" 7	34	Caught in belt and dragged into pulley.
Worker at lumber mill.	Bartonville, Que.	June 4	64	Crushed when pile of lumber fell on him. Died June 5.
Sawyer	Escourt, Que.	" 6	.....	Fell on carriage and cut by saw.
Millman	Falmouth, N.S.	" 13	21	Drowned while working on boom of logs.
Lumberman	Kinmount, Ont.	" 13	50	Struck by plank which flew off circular saw. Died June 15.
Wood products—				
Foreman at furniture factory.	Durham, Ont.	" 20	50	Skull crushed by rolling log.
Pulp, paper and paper products.				
Mill worker	Fort William, Ont.	May 18	47	Caught in conveyor belt.
Paper packer	Port Arthur, Ont.	June 7	32	Fell 20 ft. to concrete floor. Fractured skull.
Iron, steel and products—				
Worker at furnace plant.	Port Colborne, Ont.	April 2	28	Electrocuted when he came in contact with high tension wire.
Worker in blast furnace.	Sydney, N.S.	" 14	60	Collapsed while at work.
Watchman with spray mfg. Co.	Windsor, Ont.	" 26	78	Fell from bin and broke his neck. Died May 5.
Engineer at wire factory.	Hamilton, Ont.	" 28	.....	Heavy steel drum fell on him.
Tractor driver in motor plant.	Windsor, Ont.	May 9	31	Crushed between truck and freight car.
Steel worker	Sydney, N.S.	" 12	42	Struck by piece of steel which fell from pulley. Fractured skull.
Steel worker	Sault Ste. Marie, Ont.	" 20	.....	Run over by engine. Died May 21.
Machinist's helper	Lachine, Que.	" 28	17	Caught in revolving belt.
Labourer	Welland, Ont.	" 30	.....	Crushed while closing mould. Died June 3.
Steel worker	Sault Ste. Marie, Ont.	June 27	24	Struck by heavy piece of steel.
Non-ferrous metal products—				
Worker with bronze co.	Montreal, Que.	April 8	38	Struck by piece from emery wheel when it broke. Died April 9.
Worker in bronze plant.	Ville St. Laurent, Que.	" 8	35	Electrocuted when he pulled live wire switch by mistake.
Welder with electro-plating co.	Walkerville, Ont.	June 2	43	Burned in fire that destroyed plant. Died June 14.
Worker in aluminum factory.	Arvida, Que.	" 13	25	Retaining wall fell on him.
Non-metallic mineral products—				
Stonecutter at monument works.	Kitchener, Ont.	April 13	53	Stoneworker's phthisis. Laid off Oct. 28, 1928.
Worker at gas works.	Toronto, Ont.	About April 24	72	Crushed under freight elevator.
Labourer in cement plant.	Lakefield, Ont.	May 24	21	Electrocuted while changing brake band.
Chemical and allied products—				
Worker in explosive factory.	Beloeil, Que.	April 8	38	Explosion in mixing works. Second man died April 9.
Worker in explosive factory.	.....	" 8	27	
Painter at factory	Toronto, Ont.	" 9	48	Got piece of steel wool in finger. Blood poisoning. Died April 27.
Worker in creosote plant.	Near Sudbury, Ont.	June 13	.....	Struck by train while crossing tracks from plant.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—				
Buildings and structures—				
Labourer	Montreal, Que	April 4	41	Fell from scaffold. Died April 12.
Labourer	Balmy Beach, Ont	" 7	45	Crushed beneath wall when it fell on him.
Builder	Mimico, Ont	" 8	47	Wall fell on him while demolishing house.
Bricklayer	Montreal, Que	" 8	32	Scaffold on which he was working collapsed.
Labourer	Hamilton, Ont	" 14	57	Knocked off scaffold when derrick boom fell on him.
Electrician	Ottawa, Ont	" 29	17	Fell from building. Died April 30.
Labourer	Prescott, Ont	May 5	.....	Fell into sand hopper and smothered.
Labourer	Prescott, Ont	" 5	30	Fell from scow and drowned.
Engineer	Windsor, Ont	" 8	69	Fell from roof of cement house fractured skull. Died May 17.
Labourer	Toronto, Ont	About May 12	.....	Crushed under wall when it was blown down.
Roofer's helper	Mount Dennis, Ont	" 13	44	Fell from roof when gravel wheelbarrow slipped on scaffold. Broken back. Died May 19.
Helper on derrick	Toronto, Ont	" 13	34	Electrocuted when derrick cable came in contact with high tension wire.
Labourer	Burlington, Ont	" 15	49	Stepped on nail while loading lumber ; infection. Died June 2.
Carpenter	Sydney, N.S	" 15	63	Fell 40 ft. from roof.
Labourer	Montreal, Que	" 17	32	Fell from scaffold. Died May 19.
Labourer	Montreal, Que	" 21	19	Injured by explosion in storage room.
Labourer	Quebec, Que	" 21	28	Crushed in mixer when he fell in while oiling it.
Painter Painter	Near St. Eustache, Que	" 26	21 19	Drowned from canoe.
Labourer	Toronto, Ont	" 28	32	Struck by falling pipe while demolishing church. Died June 3.
Labourer	Windsor, Ont	" 29	42	Crushed by falling wall while wrecking building. Died June 2.
Carpenter	Toronto, Ont	About June 2	43	Fell into water pneumonia. Died June 9.
Labourer	Toronto, Ont	June 8	28	Struck on head by falling iron pipe.
Plumber	Owen Sound, Ont	" 10	23	Caught in shafting while repairing pipe.
Riveter	Montreal, Que	" 12	42	Fell eight storeys when board gave way.
Labourer	Calgary, Alta	" 16	28	Fell 40 ft. to basement. Died June 17.
Mechanic	McCrimmon, Ont	" 23	29	Struck by swinging boom. Died June 24.
Sawyer	Winnipeg, Man	" 25	19	Electrocuted when he slipped and grabbed switch.
Labourer	L'Islet, Que	" 26	25	Electrocuted when he touched live wire.
Worker	High Falls, Que	" 26	22	Fell 20 ft. from scaffold.
Labourer	Port Colborne, Ont	" 27	20	Fell from ladder. Died June 29.
Railway—				
Mucker	Proctor, B.C	April 26	24	Killed by falling rock.
Worker with survey party.	Near Acme, Alta	May 20	20	Railway speeder on which he was riding toppled over bridge. Died May 21.
Building foreman	Near Breckenridge, Que	" 23	58	Struck by train.
Labourer	Young, Sask	June 26	23	Gravel train on which he was riding was derailed at switch.
Shipbuilding—				
Caulker at shipyard	Kelowna, B.C	May 8	60	Drowned while launching boat.
Highway and bridge—				
Tractor driver	Restigouche Co., N.B	April 4	33	Crushed against wall by tractors.
Labourer	Willowdale, Ont	" 17	45	Crushed under gravel box while dumping load of gravel.
Worker on highway	Grafton, N.B	" 28	About 27	Crushed under large rock which he was removing from road.
Bridge foreman Bridge worker Labourer Labourer	Stoney Creek, B.C	May 5	56 25	Fell 100 ft. when bench on which they were working collapsed while dismantling bridge.
Labourer	Toronto, Ont	" 7	.....	Collapsed from heat.
Worker on bridge construction.	Near St. Jerome, Que	" 7	44	Drowned from row-boat when it was swept over dam.
Tractor driver	Near Pembroke, Ont	" 8	29	Collision of train with tractor, at level crossing.
Labourer	Montreal, Que	June 6	28	Fell from bridge and drowned.
Road worker	Near Arrowhead, B.C	" 7	.....	Buried under cave-in of gravel.
Gravel checker	Near Regina, Sask	" 11	.....	Struck by truck.
Truck driver	Hills Siding, B.C	" 26	50	Thrown from truck when it went off road, fractured skull.
Labourer	Near Mildmay, Ont	" 30	68	Fell under cement mixer and struck by shovel.
Miscellaneous—				
Worker on sewer construction	Saskatoon, Sask	April 2	52	Crushed by cave-in of sewer.
Labourer on sewer construction.	Sudbury, Ont	" 3	.....	Plank fell on him while planking ditch. Died April 13.
Worker on canal construction.	Near Merritton, Ont	" 3	40	Fell 40 feet from ladder. Died April 4.
Worker on telephone line construction.	Calgary, Alta	" 12	22	Fell from truck load of poles, fractured skull. Died April 14.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
CONSTRUCTION—*Con.*				
Miscellaneous—Con.				
Labourer on sewer construction.	Toronto, Ont.	April 23	51	Crushed under cave-in of clay.
Well driller	Near Lipton, Sask.	" 26	.....	Overcome by flow of natural gas in well.
Lineman on telephone line construction.	Near Walkerton, Ont.	" 26	.....	Drowned when punt upset while crossing river.
Worker on sewer construction.	Toronto, Ont.	" 28	.....	Buried by cave-in of sewer.
Carpenter on power development.	Seven Sisters Falls, Man.	May 21	64	Injured when he fell from scaffold. Died June 16.
Labourer on water main construction.	Brandon, Man.	June 16	36	Crushed by cave-in of water main ditch.
Foreman on power line construction.	Near Georgeville, Que.	" 24	.....	Premature explosion while blasting rock.
1 cook	St. Lawrence River, near Brockville, Ont.	June 26	45	Explosion of dynamite on drill boat when it was struck by lightning.
2 cookees			45, 18	
2 firemen			31, 35	
1 burner			37	
1 oiler			38	
1 powderman			23	
1 powderman helper			38	
9 drillers			25,36,30	
			22,26,54	
			25,36,37	
2 blacksmiths			39, 26	
1 blacksmith helper			35	
9 labourers			26,39,36	
			28,18,27	
			35,28,30	
Worker on power line construction.	Near Chilliwack, B.C.	" 26	56	Tree fell on him when knocked down by pole.
Well digger	Nanaimo, B.C.	" 28	62	Injured by delayed dynamite explosion.
Worker on canal construction.	Near Welland, Ont.	" 30	33	Struck by tackle block when guy rope of derrick broke.
Electric light and power—				
Lineman	Near Estevan, Sask.	April 5	26	Drowned from boat when it upset in swollen waters.
Mechanic with Govt. Dept.	Queenston, Ont.	" 9	40	Burned when kerosene exploded from torch. Died April 10.
Lineman	Near Port Credit, Ont.	May 2	47	Electrocuted while testing a line.
Workman on power plant.	Montreal, Que.	" 10	31	Touched live wire while dusting cables and was electrocuted.
Lineman	Near Delta, Ont.	" 12	34	Electric burns while at work. Died June 17.
Lineman	Montreal, Que.	" 19	38	Electocuted whenhe fellagainst high voltage wire
Lineman	Winnipeg, Man.	June 16	27	Electrocuted when he clutched high tension wire.
Lineman	Nantel, Que.	" 21	31	Electrocuted when he touched live wire.
TRANSPORTATION AND PUBLIC UTILITIES—				
Steam Railways—				
Carpenter	Baxter, Ont.	April 2	50	Fell from car and was run over.
Brakeman	Lenore, Man.	" 4	38	Fell from car and run over by train.
Brakeman	Near Kamloops, B.C.	" 8	30	Injured when train hit a slide.
Section labourer	Sulphide, Ont.	" 12	21	Struck by train.
Coalheaver	Palmerston, Ont.	" 14	39	Injured thumb nail while loading main rod on car. Septicaemia. Died April 30.
Air brake inspector	Montreal, Que.	" 14	43	Crushed between two trains. Died April 17.
Bridge inspector	Portsmouth, Ont.	" 15	65	Strangulation hernia while at work. Died May 21.
Sectionman	Near Acme, Alta.	" 17	45	Skull crushed when he fell from hand-car and was run over.
Trainman	Near North Bend, B.C.	" 18	.....	Killed when train ran into rock slide.
Railway policeman	Vancouver, B.C.	" 21	45	Struck by locomotive.
Section foreman	Near Elmwood, Ont.	" 28	59	Injured when motor car left track. Died May 24
Sectionman	Near Richelieu, Que.	" 29	46	Run over by section car when he fell off it.
Sectionman	Ste. Rose, Que.	" 29	37	Struck by train.
Switchman	Toronto, Ont.	" 30	28	Struck by box car while it was being shunted.
Labourer	Illecillewaet, B.C.	May 3	50	Struck by train.
Roundhouse worker	Sarnia, Ont.	" 3	41	Struck by engine.
Night watchman at bridge.	Port McNicoll, Ont.	" 3	62	Fell from bridge and drowned.
Sectionman	New Hamburg, Ont.	" 4	38	Struck by train.
Trainman	Cartier, Ont.	May 6	35	Struck by van. Fractured spine. Died May 8.
Labourer	Toronto, Ont.	" 12	58	Ran splinter in thumb while picking up scrapwood. Died June 12.
Switchman	Toronto, Ont.	" 16	49	Crushed between two cars while making a coupling.
Trainman	Konack Creek, B.C.	" 18	28	Killed when he jumped from train.
Porter	Hamilton, Ont.	" 20	58	Fell down steps of refrigerator car, injuring spine. Died June 18.
Trainman	Darlington, Ont.	" 22	39	Fell under engine and was run over.
Brakeman	Near Kingston Mills, Ont.	" 26	47	Crushed between two cars while coupling same.
Sectionman	Near Kenora, Ont.	June 1	26	Struck by train.
Sanitary excavator	Glen Tay, Ont.	" 5	.....	Struck by train.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1930—*Continued*

Trade or Industry	Locality	Date	Age	Cause of Fatality
TRANSPORTATION AND PUBLIC UTILITIES—*Con*				
Steam Railways—Con.				
Boilermaker	Stratford, Ont.	June 6	50	Burned when plug from boiler blew out. Died June 7.
Fireman	Hamilton, Ont.	" 7	45	Struck by mechanical shaker bar.
Carman	Moose Jaw, Sask.	" 7	48	Crushed between two cars.
Labourer	Ste. Anne's, Que.	" 8	30	Struck by train.
Sectionman	Near Tracey, N.B.	" 16	46	Collision of train with speeder on which they
Sectionman			61	were riding.
Sectionman	Port Arthur, Ont.	" 19	40	Run over by train.
Engineer	Near Capreol, Ont.	" 27	.....	Burned when their engine wes derailed owing to
Fireman			.....	swollen waters. One died June 28, the other on the 29th.
Water Transportation—				
Carpenter on ship	Quebec, Que.	April 17	55	Slipped and fell off gangway, fracturing skull.
Sailor	Soulanges Canal, Que.	" 19	23	Drowned while crossing to ship.
Deck hand	Hamilton, Ont.	May 4	.....	Fell when guard chain broke. Fractured skull. Died June 5.
Worker on towboat	Near Quebec, Que.	" 11	60	Asphyxiated by fumes from gasoline motors.
Worker on towboat			45	
Labourer unloading coal.	Montreal Que.	April 13	50	Crushed under moving crane.
Deck hand	Owen Sound, Ont.	" 14	54	Fell down hatchway.
Deck hand	Near Cornwall, Ont.	" 14	16	Fell from landing boom and drowned in canal.
Deck hand			16	
Waiter	Fort William, Ont.	June 4	25	Run over by train.
Longshoreman	Port Arthur, Ont.	" 7	27	Fell overboard from barge and drowned.
Electrician			28	
Electrician	Thorold, Ont.	" 19	26	Electrocuted when metal ladder which they were
Electrician			27	raising touched high tension wire.
Deck boy	Vancouver, B.C.	" 23	19	ell into hold of ship.
Labourer	Near Three Rivers, Que.	About June 23	30	Skull crushed while unloading logs from boat.
Air Transportation—				
Pilot with Airways Co.	Lake Seseganaga, Ont.	June 2	.....	Crashed into lake and drowned owing to dense smoke clouds.
Local Transportation—				
Truck driver	Montreal, Que.	April 6	32	Truck crashed through viaduct railing and fell 45 feet.
Truck driver	Montreal, Que.	" 10	25	Crushed between two trucks. Died April 12.
Truck driver	Lanigam, Sask.	" 10	60	Thrown against wind-shield when his truck skidded.
Carter	Montreal, Que.	April 12	38	Injured by gas explosion in house from which he was removing furniture. Died April 20.
Truck driver	St. Constant, Que.	" 17	15	Collision of train with their truck.
Helper			11	
Teamster	Montreal, Que.	" 30	33	Collision of auto with his wagon. Fractured skull Died May 1.
Labourer	Edmonton, Alta.	May 9	18	Crushed under rolling telephone poles while unloading them from flat car.
Teamster	Haileybury, Ont.	About May 15	53	Team took fright and threw him under wagon to which he was hitching them.
Truck driver	St. Marie de Manoir, Que.	About June 4	25	Injured when tire burst.
Truck driver	St. Arsene, Que.	June 16	33	Collision of train with his truck.
Telegraphs and Telephones—				
Lineman	Dartmouth, N.S.	April 22	23	Struck by flying rock from blast. Fractured skull.
Lineman	Carp, Ont.	May 17	53	Stunned by lightning bolt and fell 30 ft. from pole.
Lineman	Montreal, Que.	June 10	49	Fell from telegraph pole.
TRADE—				
Wholesale—				
Salesman	Moreland, Sask.	About May 15	35	Collision of train with his auto.
Salesman with wire works co.	Near Port Hope, Ont.	June 19	35	Auto collision.
Retail—				
Driver for ice co.	Toronto, Ont.	April 8	56	Injured while packing ice in refrigerator. Died April 9.
Driver of bread wagon.	Montreal, Que.	" 10	20	Collision of street car with his wagon. Died April 27.
Truck driver for dairy co.	North Vancouver, B.C.	" 16	29	Injured when truck overturned. Died May 9.
Lightning rod erector	Port Credit, Ont.	" 23	53	Fell from roof while connecting rod to chimney. Died April 24.
Truck driver for coal co.	Montreal, Que.	May 2	37	Struck by lightning.
Cattle buyer	Near Renfrew, Ont.	" 2	86	Injured when his horse ran away. Died May 6.
Worker with ice co.	Hudson, Que.	" 7	.....	Injured by fall at ice plant. Died May 13.
Worker with iron dealer.	Montreal, Que.	June 5	20	Crushed under steel beam while loading it on truck.
Worker at filling station.	Montreal, Que.	" 13	21	Burned from explosion of oil tank.

FATAL INDUSTRIAL ACCIDENTS IN CANADA DURING THE SECOND QUARTER OF 1930—*Concluded*

Trade or Industry	Locality	Date	Age	Cause of Fatality
SERVICE—				
Public administration—				
Civic labourer	Winnipeg, Man.	April 6	54	Struck by auto.
Liquor control board manager.	Minto, N.B.	" 7	39	Crushed by falling chimney after fire.
Fire alarm superintendent.	Ottawa, Ont.	" 9	42	Fell when telephone pole on which he was working broke. Died April 10.
Fireman	Halifax, N.S.	About April 16	.....	Fell from ladder fracturing skull. Died April 24.
Labourer	Winnipeg, Man.	April 16	54	Struck by auto.
County police sergeant.	Near Toronto, Ont.	" 17	.....	Killed in auto crash.
Fireman	Vancouver, B.C.	" 17	37	Fell 30 ft. from ladder during fire drill.
Town clerk	Alberni, B.C.	" 23	48	Shot in vault.
Town labourer	Truro, N.S.	" 29	65	Collision of auto with truck on which he was riding.
Gov't labourer	Pickering, Ont.	May 2	30	Strained while lifting timber. Died May 12.
Fireman	Quebec, Que.	" 12	64	Knocked down by horse—fractured skull.
Fire station captain	Ottawa, Ont.	" 19	55	Fell with collapsing wall and buried in fragments of building during fire.
Fireman			37	
Labourer with Gov't dept.	One Sided Lake, Ont.	" 26	24	Drowned from canoe.
Street worker	Montreal, Que.	June 3	24 34	Collapsed from heat.
Fire fighter	Cedar Lake, Ont.	" 17	.....	Drowned when canoe capsized in choppy water.
Labourer with Gov't dept.	Woodstock, Ont.	" 20	24	Crushed under oil breaker tank when it overbalanced while unloading it.
Recreational—				
Parachute jumper	Toronto, Ont.	May 20	22	Fell from plane.
Circus employee	Longueuil, Que.	June 27	28	Electrocuted while working at electric lights.
Laundering, dyeing and cleaning—				
Worker with cleaners	Hamilton, Ont.	May 27	17	Burns from ignition of gasoline. Died June 4.
Custom and repair—				
Aerial erecter	Montreal, Que.	April 7	38	Fell from roof of house.
Motor mechanic	Lake Ontario, Ont.	May 30	19	Drowned from motor boat.
Blacksmith	Afton, N.S.	About June 19	45	Struck in eye by piece of lath. Died June 25.
Personal and domestic—				
Workman	Ottawa, Ont.	May 16	40	Pinned under limb of tree which he was felling.
Professional establishments—				
Hospital employee	Quebec, Que.	June 14	23	Fell from ladder fracturing skull.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING FIRST QUARTER OF 1930

Trade or Industry	Locality	Date	Age	Cause of Fatality
LOGGING—				
Labourer	Albert Co., N.B.	Feb. 24	51	Fell from tree. Pereitonitis.
Labourer	Ignace, Ont.	Mar. 13	44	Slipped and fell on icy logging road. Fractured thigh. Died May 22.
MINING, NON-FERROUS SMELTING AND QUARRYING—				
Coal mining—				
Engineer	Michel, B.C.	Jan. 11	26	Forehead struck stop block. Died May 9.
MANUFACTURING—				
Textiles and clothing—				
Hosiery turner at factory.	Hamilton, Ont.	Mar 26	16	Fell from stool injuring knee. Died April 25.
Saw and planing mill products—				
Labourer	Carleton Co., N.B.	Feb. 4	25	Cut by saw. Hemorrhage.
Filer in shingle mill	North Vancouver, B.C.	Mar. 14	73	Cut finger on saw. Septicemia. Died April 1.

SUPPLEMENTARY LIST OF FATAL INDUSTRIAL ACCIDENTS OCCURRING DURING 1929

Trade or Industry	Locality	Date	Age	Cause of Fatality
AGRICULTURE AND STOCKRAISING—				
Rancher	Near Mankota, Sask.	About Dec. 15	.....	Perished in blizzard.
LOGGING—				
Logger	Queen Charlotte Islands, B.C.	June ..	54	Back broken when log rolled on him. Died April 26, 1930.
Driver	Alzo Lake, B.C.	Oct. 12	25	Lost control while driving jitney. Died Mar. 30, 1930.
Labourer	Madawaska, Co., N.B.	Dec. 6	31	Burned by gasoline explosion.
Logger	Northumberland Co., N.B.	Dec. 19	.....	Struck by train. Fractured skull.
CONSTRUCTION—				
Highway and bridge—				
Road boss	Port Clements, B.C.	Aug. 15	54	Struck by falling tree. Died April 26, 1930.
TRADE—				
Retail—				
Labourer with coal co.	Vancouver, B.C.	Nov. 12	37	Crushed by conveyor chain. Died June 1, 1930.

Occupational Disease Bureau in New Jersey

At the last annual meeting of the International Association of Industrial Accident Boards and Commissions, Mr. Charles R. Blunt, commissioner of Labour of New Jersey, stated that in New Jersey an occupational disease investigation bureau has been formed, consisting of a field director, medical director, expert chemical consultant, and a laboratory technician. Contacts are made with plants handling poisonous substances; physical examinations are made of the workmen employed, and in this manner an effort is being made to determine whether the enforcement of regulatory health measures by the Department of Labour is really furnishing adequate protection to workmen. "The industries of our State are being furnished with definite information of the physical condition of workers employed, so that plant managers may know whether their work is being performed with a reasonable degree of freedom from occupational health losses. I am sure the time is ripe for pressing this kind of departmental service to its fullest extent and that, within the next few years, a very large percentage of all workers in the poison trades will be given adequate physical examinations with check-ups on health conditions that will stave off sickness due to the inhalation, ingestion, or absorption of trade poisons."

RECENT LEGAL DECISIONS AFFECTING LABOUR

Considerations affecting question of an employer's negligence

A saleslady in a store in British Columbia received injuries in the course of her duties while descending into a sub-basement, by falling through the supports to the handrail of the stairway to the floor about eleven feet beneath. In an action against the employing company for damages the jury found that negligence on the part of the company had been shown, and returned a verdict for the plaintiff. On appeal, the British Columbia Supreme Court let the verdict stand. In the course of his judgment Chief Justice Morrison stated certain principles to be observed in considering the question of employers' alleged negligence.

"Where a thing is solely under the management of the defendant or his servants, and the accident is such as in the ordinary course of events does not happen to those having the management of such things and using proper care, the accident itself affords *prima facie* evidence of negligence."

"*Volenti non fit injuria:* This maxim is relied upon as one line of defence. In action of negligence it is a good defence that the plaintiff with full knowledge and appreciation of the risk of danger from the defendant's negligence voluntarily accepted the risk and exposed himself to the danger. And it is a question of fact and not of law whether the plaintiff voluntarily incurred the risk, and the burden of proof is on the defendant.

"Lord Esher, M.R., stated the rule in *Yarmouth v. France* (1888):—'It seems to me to amount to this, that mere knowledge of the danger will not do; there must be an assent on the part of the workman to accept the risk with a full appreciation of its extent, to bring the workman within the maxim *volenti non fit injuria*. If so it is a question of fact.'

"Postulating that there was negligence then the maxim does not mean that whenever a person knows there is a risk of being injured by another's negligence whilst doing something, he is incapable of recovering in an action if nevertheless he does the thing with knowledge of that risk. The line between cases where the rule is applicable and where not seems to be a transient one and often difficult to discern.

"It is a question for me to decide whether there is any evidence to be left to the jury from which negligence causing the injuries complained of may be reasonably inferred, and for the jury to say whether and how far the evidence is to be believed, and whether in fact there was negligence which was the effective cause of the damage. I think the view by the jury is a part of the plaintiff's evidence and although, had I been on the jury, I would not, having regard to all the circumstances involved in the view, have found negligence against the defendants, yet the jury having seen the stairway, and the conditions admitted to have existed at the time of the accident, I fear I would be usurping their functions were I to intrude my conclusions and intercept the expression of theirs on a question of evidence amounting to more than a scintilla. The application is refused and I shall let the verdict stand."

Evans versus Hudson's Bay Company (British Columbia), 1930, *Western Weekly Reports*, vol. 2, page 718.

Public Official retains individual rights if injured through corporate act

A member of a village council in Saskatchewan was injured by the explosion of a chemical fire extinguisher while he was proceeding to use it in helping to put out a fire in the village. He brought an action for damages against the village and the jury in the case found that the defendant was negligent in not having the extinguisher properly inspected and kept in perfect working order, but it also found the plaintiff guilty of contributory negligence because of the fact that he was one of the village councillors. The action was accordingly dismissed. The plaintiff appealed in the Saskatchewan Court of Appeal, which reversed the judgment of the lower court.

Mr. Justice Turgeon, in the course of his judgment, pointed out that the questions at issue were, first, who was to blame for the defective condition of the extinguisher, and, next, did the plaintiff himself contribute to the accident by any act or any omission of his own? The jury considered that there was evidence of negligence on the part of the village; "it was not unreasonable that they should come to this conclusion, and consequently their finding of negligence must stand." The court also sustained the jury's finding that the plaintiff was not guilty of contributory negligence in the manner in which he operated the extinguisher. On the other hand, the Court of Appeal disagreed

with the finding of the jury that the plaintiff was guilty of negligence in his official capacity as a member of the village council. "I am, with great respect, of the opinion that the plaintiff's claim should not have been defeated by any act or omission chargeable to the corporate body of which he was a member and revealed by the evidence, and that consequently his appeal on this point must be allowed. This defence to the plaintiff's action," the judgment proceeded, "is founded on the theory that if the defendants were negligent in not keeping the fire extinguisher in a safe condition, the plaintiff himself shared the responsibility along with his fellow members of the village council; that therefore the village's negligence is his negligence, and that this negligence of his will defeat his action against the village. The principle embodied in the maxim *volenti non fit injuria,* was also relied upon. . . . "I know of no principle which would exclude a member of a village council, merely because he was such a member, from the right to recover damages against the corporation for injuries sustained through the extinguisher not having been kept in proper working order by the official of the corporation especially charged with the duty of so keeping it."

Smith versus Kelleher Village (Saskatchewan), 1930, *Western Weekly Reports,* vol. 2, page 638.

Civil Court cannot grant Injunction to Prevent Criminal Offence

The proprietor of a moving picture theatre at Hamilton applied in the Weekly Court, Toronto, in July, for an order containing an interim injunction that had been granted by the Local Judge at Hamilton, restraining the business agent of a local union and others from "watching, besetting or picketting" the theatre, or otherwise interfering with the plaintiff or the patrons by standing about or walking up and down near the theatre displaying notices to be read by the patrons.

Mr. Justice Garrow, in refusing the application, said that the plaintiff was the proprietor of the theatre and the defendant Baldassari the business agent of the Hamilton branch of the International Alliance of Theatrical Stage Employees and Moving Picture Operators of the United States and Canada. The other defendants were not members of the Alliance. "The plaintiff refused, as was his right, to accede to the suggestion of Baldassari that he (the plaintiff) should employ four projectionists in connection with his moving pictures; and, in consequence, when the theatre opened for the first time on June 21, 1930, the defendants or some of them proceeded to walk up and down in front of the theatre wearing rubber rain coats upon which were printed the words: 'Protect your own future by staying away from this theatre; this theater is trying to destroy union working conditions; this theatre does not employ union projectionists; stay away from this theatre if you believe in union working conditions.' This was repeated in the afternoon and evening of June 23, and on the last-mentioned date the plaintiff laid an information against the defendants under section 501 (*f*) of the Criminal Code before the Hamilton police magistrate, and on the 26th June they were convicted of the offence of 'picketting.' It is alleged that, notwithstanding this conviction the defendants continued to beset the plaintiff's premises; and this action was begun and an injunction granted as above.

"There is nothing in the material to indicate that the defendants or any of them actually interfered with the plaintiff or accosted any of the patrons of the theatre, nor is it shown that the plaintiff has suffered or is likely to suffer any loss by reason of the acts of the defendants. The gist of the application seems to be an attempt to persuade the civil courts to restrain the defendants by injunction from committing what may be and has in their own case been held to be a criminal offence.

"That being the substance of the motion, it must fail. 'The equitable jurisdiction of a civil court cannot properly be invoked to supress crime. . . . When Parliament has in the public interest forbidden certain acts and made them an offence against the law of the land, then, unless a right to property is affected, the civil courts should not attempt to interfere and forbid by their injunction that which has already been forbidden by Parliament itself.' *Robinson v. Adams* (1924), 56 O.L.R. 217, 224. 'It is safe to say that the Court of Chancery never granted an injunction in aid of the criminal law or as supplementing the criminal law if it was found to be inefficient:' ib., p. 225.

"It cannot be found, on the material, that any right to property has been threatened or invaded by the defendants, and the passages quoted from the Robinson case fully apply here.

"The motion must be refused; costs in the cause to the defendants."

Stewart versus Baldassari (Ontario) 1930, Ontario Weekley Notes, vol. 38, page 431.

THE LABOUR GAZETTE

PREPARED AND EDITED BY
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 30] SEPTEMBER, 1930 [NUMBER 9

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL Employment in Canada, as indicated by the number of employees on employers' payrolls at the beginning of August showed very little general change, according to statements tabulated by the Dominion Bureau of Statistics from 7,357 firms throughout the Dominion in all lines of industry except agriculture, fishing, hunting and highly specialized business. These firms employed 1,042,710 workers, compared with 1,043,881 on July 1. The index (based on the average in the calendar year 1926, as 100), stood at 118·8 on August 1, compared with 118·9 in the preceding month, and with 127·8, 119·3, 110·5, 105·5, 97·5, 95·8, 101·4, 94·2 and 90·0 on August 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

At the beginning of August, 1930, the unemployment percentage reported to the Department of Labour by local trade unions stood at 9·2, contrasted with 10·6 per cent of idleness at the beginning of July, and 3·0 per cent at the beginning of August, 1929. The August percentage was based on the reports received by the Department of Labour from 1,676 labour organizations, covering a membership of 200,122 persons.

Reports received by the Department of Labour in the offices of the Employment Service of Canada showed a decline in the volume of business transacted in July as compared with that of the preceding month and also with that of July, 1929, this computation being based upon the average number of placements recorded daily in the offices of the Employment Service throughout Canada.

The average cost of a weekly family budget of twenty-nine staple foods was $10.65 at the beginning of August, as compared with $10.91 for July; $11.63 for August, 1929; $11.08 for August, 1928; $10.93 for August, 1927; $11.10 for August, 1926; $10.84 for August, 1925; $10.19 for August, 1924; $10.53 for August, 1923; $10.44 for August, 1922; $11.44 for August, 1921; $16.92 for June, 1920 (the peak), $13.41 for August, 1918; and $7.68 for August, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 84·1 for August, as compared with 85·8 for July; 98·1 for August, 1929; 95·4 for August, 1928; 102·1 for August, 1927; and 98·6 for August, 1926.

The loss in working time caused by industrial disputes in Canada was considerably less in August than in the preceding month or in July last year. Three disputes existed at some time during the month, involving 65 workers, and resulting in the loss of 484 working days. Corresponding figures for July, 1930, were: six disputes, 240 workers, and 2,600 working days; and for August, 1929, ten disputes, 957 workers, and 3,217 working days.

Industrial Disputes Investigation Act

During August the Department of Labour received reports from the Board of Conciliation and Investigation appointed to deal with a dispute between the Winnipeg Electric Company and certain of its employees. One new application for the establishment of a Board was received, and in connection with an application already reported the Board was completed during the month. An account of recent proceedings under the Act, including the text of the reports referred to above, is given on page 1009.

Special session of Dominion Parliament

The Seventeenth Parliament of Canada met in a special session commencing on September 8, for the purpose of "dealing with exceptional economic conditions, with the resultant unemployment." The measures proposed by the Government for improving these conditions are outlined on another page. This issue also contains an account of the meeting of the Employment Service of Canada which was held towards

the end of August, recommendations being adopted for the relief of the situation in regard to unemployment.

Minister of Labour appeals for co-operation

In connection with the observance of Labour Day on September 1, the Hon. G. D. Robertson, Minister of Labour, issued a statement in reference to unemployment in Canada, suggesting methods whereby public bodies and private citizens might co-operate in alleviating suffering from this cause during the coming winter. "In this connection," he said, "a few suggestions might be useful, such as remembering that the shadow of unemployment is the darkest cloud on the wage earner's horizon. When it has lingered long, it kills ambition, rouses resentment in men's bosoms, and saps the vitality of the nation, as well as that of the individual directly affected.

"Perhaps each will try to do what he or she would wish others to do. Banking institutions might help by extended credits granted industry whereby employment might be stimulated. Employers could co-operate by distributing available employment as widely as possible. Workmen could materially aid by being content with a maximum of one day's pay for each working day in the week or month. Home owners and landlords might paint the exteriors now and decorate the interiors of thousands of homes during the coming fall and winter when there is a surplus of unemployed labour. Railroads and other large purchasers of supplies could probably buy more cheaply now than later, the saving in cost compensating them for advanced purchases. Governments, local, provincial and federal, will, judging from pledges already given, undertake construction and improvement programs creating immediate employment. We can all help by buying Canadian goods produced by Canadian labour.

"There are approximately 2,500,000 persons in Canada who are wage earners. The number facing unemployment this winter will be roughly 200,000 or eight of every hundred persons directly affected. Deducting the inevitable normal seasonal unemployment of probably 50,000 the problem facing the Canadian nation although serious is surely not insurmountable. If one looks at a map of this far-flung country and studies it just a little, the many opportunities in Canada awaiting the touch of capital and labour co-operatively applied to its untouched natural riches, he will quickly take courage and face the nation's immediate task with full confidence. The number directly concerned scarcely exceeds one year's normal immigration.

"On behalf of the federal Department of Labour, whose watchword shall be 'service', I seek with confidence the co-operation of every citizen and agency to the end that Canada shall again in 1931 be found marching confidently forward toward its future greater destiny."

One Day's Rest in Seven in Saskatchewan

The One Day's Rest in Seven Act, passed by the Saskatchewan Legislature at its last session (LABOUR GAZETTE, June, 1930, page 656), after enumerating the occupations covered by its provisions, provided further that the Lieutenant Governor in Council might declare any industry to be exempt. Accordingly, by an Order in Council dated July 2, 1930, the following industries ceased to be subject to the provisions of the Act on July 1:

(*a*) the industry of members of the Fire Departments of the cities of the Province; and

(*b*) the industry of nursing including graduate nurses, pupil nurses in training, orderlies, and persons employed in any technical or professional capacity in the care of the sick in all hospitals in the Province whether such hospitals are municipally owned or otherwise.

Labour legislation in Canada in 1929

The Department of Labour recently published the first annual supplement to the consolidated volume which was published last year under the title "Labour Legislation in Canada as existing on December 31, 1928." The supplement contains the text of the labour legislation enacted during 1929 by the Parliament of Canada and by the several provincial legislatures. In the case of acts amending previous legislation notes have been inserted so as to make the meaning of the amendments clear to the reader. In addition to the statutes several Orders in Council and certain regulations made under statutory authority have been included. The supplement may be obtained from the Department of Labour at a cost of 25 cents.

Doctors recommend public health insurance

A public system of health insurance was advocated by Professor W. Harvey Smith, of Winnipeg, in his presidential address before the annual meeting of the British Medical Association at Winnipeg during August. Dr. Smith stated that the medical profession was often criticized for its failure to bring competent service within reach of the various sections of the community. "The economic organization of medicine," he admit-

ted, "has not kept pace with its scientific progress." Corporate medicine had failed, he said, to develop a system under which the best medical aid would be made available to all classes, and especially to the rural districts, and no protest would therefore be raised if the governments took steps to inaugurate a system of medical service of whatever type and character seemed best.

Dr. Smith noted the prevailing trend in Canada to provide adequate medical services through organization, and in this connection he referred to the movement towards health insurance in British Columbia; the travelling clinic in Alberta; the municipal physicians and other developments in Saskatchewan. "In my judgment," he concluded, "there is only one possible solution—health insurance." Such a system, in addition to bringing medical aid to the poor, would also create juster conditions for doctors. At the present time, he stated, about thirty per cent of patients are attended without charge by the medical profession.

References were made in the last issue of the Labour Gazette (page 913) to the progress of health insurance in Canada, including the recommendation of the Standing Committee on International and Industrial Relations, which was accepted by the House of Commons at its last session, as follows: "That with regard to sickness insurance, the Department of Pensions and National Health be requested to initiate a comprehensive survey of the field of public health, with a special reference to a national health program. In this, it is believed that it would be possible to secure the co-operation of the provincial and municipal health departments, as well as the organized medical profession."

The municipal doctor scheme of Saskatchewan, mentioned above, is described on another page of this issue.

Education of soldiers' children in Alberta

The Education of Soldiers' Children Act, recently passed by the Alberta Legislature, provides higher educational facilities for the children of soldiers who enlisted for service in the Great War and were resident in the province at the time of their enlistment. This work will be in charge of a board consisting of three members serving without remuneration for the period of three years. The facilities to be offered include academic courses up to obtaining the standing required for entrance into the University of Alberta, or for a second class teacher's diploma; technical, agricultural and commercial courses in those institutes which are covered by the inspectorate of the Departments of Education and Agriculture; nursing, domestic science and kindred subjects covered by the inspectorate of the Department of Health. The Board is only empowered to grant assistance to children who have attained grade VIII standing or higher.

Proposed Public Welfare Department for Ontario

The Royal Commission on Public Welfare, which was appointed last October by the government of Ontario, submitted a report during August. Among other recommendations the commissioners propose the establishment of a department of public welfare to strengthen government supervision of the social and corrective institutions and agencies of the province. They suggest that such a department might be organized on the following lines:—

The Minister of Public Welfare; the Deputy Minister; a director (or supervisor) under the Deputy Minister at the head of each branch, as follows:—

Director of mental hygiene, supervising the hospitals for mental disease, the schools for defective children, the preventive clinics and follow-up work in such connections, etc.

Director to supervise psychiatry, research work, classification, etc.

Director of child welfare, to supervise the Children's Aid Societies, orphanages, and infants' homes and the problem of unmarried parents.

Director of adult relief, to take care of the multifarious matters in connection with refuges, poorhouses, indigents, old age pensions, mothers' allowances, soldiers' aid, etc.

Director for the handicapped children, the crippled, blind, deaf and dumb.

Director of the adult corrective institutions (reformatories and jails).

Director of juvenile delinquents, to supervise the juvenile courts, industrial schools, etc.

Director for supplies and products. "There should be a central bureau for business management and to purchase supplies for all provincial institutions, to promote productivity in each institution, and to see that the institutions give as much business to each other as possible in the way of inter-mutual sale, purchase and consumption of the products of the various hospitals, reformatories, farms, jails and industrial schools."

Director of inspection, with a staff embracing special officers and technicians of various classes. "There seems much necessity that every institution receiving government money should be frequently and thoroughly visited and analyzed by an independent authority; and also all such agencies as operate under Government charter, even though not receiving Government grants."

Research Council for Alberta

The Legislature of Alberta, at its recent Session, passed an "Act to Establish a Research Council in Alberta". The council will consist of not more than ten members, including two members of the Executive Council of the Province, and the President of the University of Alberta, who is to act as director. The other members will hold office for one year, but will be eligible for reappointment. All members will serve without remuneration. The new Council is authorized to promote (1) the utilization of the natural resources of Alberta (2) researches with the object of improving technical processes and methods used in the industries of Alberta and of discovering processes and methods which may promote the expansion of existing or the development of new industries; (3) researches with the view of utilizing the waste products of said industries; (4) the investigation at the request of any of the industries of Alberta of the materials which are or may be used in, or of the product of, the industries making such a request; (5) researches the objects of which are the betterment, welfare and progress of the urban or rural life in the Province;

The Council will have charge of, and direction or supervision over, the researches which may be undertaken, under conditions to be determined in each case, by or for single industrial firms, or by such organizations or persons, as may desire to avail themselves of the facilities offered for this purpose. It will have power to expend such sums of money as may be annually appropriated by the Legislative Assembly for the work of the Council, or which shall have been received by the Council through bequest, donation or otherwise. Subject to the approval of the Lieutenant Governor in Council, the Council will have power to appoint such scientific, technical and other officers, and to fix the tenure of such appointments, to prescribe the several duties of such officers, and to fix their remuneration.

Decrease of compensable accidents in Quebec

The Workmen's Compensation Commission of the Province of Quebec made public during August the preliminary figures of accidents and claims for compensation during the first six months of 1930. These figures show a decrease in the number of accidents to workmen as compared with the corresponding period last year. (The figures for 1929 were reproduced in the LABOUR GAZETTE, July, 1929, page 739.) Mr. Robert Taschereau, K.C., the chairman of the Commission anticipates that the improvement will continue to the end of the current year, as "everything leads us to believe that we will have a much smaller number of cases to settle from now on to the end of December." This year, from January 1 to June 30 the number of claims received totalled 9,738. Of this number, 9,701 cases were settled, the workers receiving compensation for temporary incapacity in 8,391 cases, while in 1,232 cases permanent incapacity was allowed, with 78 deaths reported. During the first six months of the year $1,737,040.64 was paid out as compensation to injured persons, $458,739.50 for temporary incapacity, $808,932.66 for permanent incapacity, and $469,318.48 for mortality.

During 1929 25,610 claims were received by the Commission and the companies were ordered to pay in 21,377 cases.

Mechanical hazards in industry lessened

The annual report of the Secretary-Treasurer of the Nova Scotia Accident Prevention Association, presented at the recent annual meeting, points out that, in keeping with the experience of other jurisdictions where monopolistic state fund insurance is in force, the number of accidents has been increasing each year, the total for 1929 having been 10,086 an increase of 1,737 over 1928. Increasing familiarity with the provisions of the Act and ways and means of taking advantage of it, and the fact that employers are encouraging the reporting of all minor accidents in order that First Aid treatment may be given, are considered as the principal reasons for the greater number of accidents. The number of injuries directly due to mechanical hazards is, however, gradually being reduced and the majority of accidents are "due to what is styled in safety circles as the failure of the human element."

Principles of accident prevention in industry

The British Columbia Workmen's Compensation Board, in their annual report for 1929 (reviewed on another page of this issue) freely admits that "the hopes of those interested in the accident prevention movement have not been realized." Discussing the possibility of an improvement the Commissioners indicate the lines which safety work should take in the future as follows:—

"The belief is becoming more generally held that the solution of the whole distressing accident problem rests primarily on: (1) Selecting the right man for the particular

job; (2) educating him in the proper methods of carrying out his work; (3) providing the proper equipment, including necessary safeguarding; and (4) adequate supervision and eternal watchfulness.

"Some notable evidences of excellent safety work," the Board continues, "are to be seen in the records of certain individual plants where a consistent safety policy has been in effect for a number of years. Considerable effective work has been accomplished by the safety departments of the B.C. Lumber and Shingle Manufacturers, the Shipping Federation of British Columbia, and the B.C. Loggers' Association.

"Accidents can occur from so many different causes and under such varying circumstances that the safety education of the individual workman is of prime importance. The safety sense must be developed to a point where the individual instinctively sees and avoids danger. The school of experience had proved too costly, both for the workman and for the employer, to permit relaxation in safety vigilance. Just to the extent that workmen and employers become seized with the 'accident prevention idea' will the heavy sacrifice in men and money in industry be curtailed."

Accident Experience of C.P.R. Shops

Mr. E. W. Beatty, president of the Canadian Pacific Railway Company, in his address before the recent annual meeting of the Industrial Accident Prevention Associations (Labour Gazette, May, 1930, page 540), summed up the experience of his company in regard to industrial accidents in the Angus shops at Montreal. "In these shops" he said, "we employed during 1929 a maximum of 8,500 men, and during this period there were 240 minor accidents, 8 classed as serious and one resulting in death. In view of the size of the shops, the character of the work done, and the various nationalities represented among the employees, we consider this to be a favourable showing, though efforts to reduce the number must, of course, never cease.

"We have found the most effective way of reducing accidents, in our shops in particular, is by placing squarely on the shoulders of the foreman of each department or sub-department the duty of seeing that the rules of safety are not violated. It has been found, both in Canadian and American railways, that this method is productive of better results than can otherwise be obtained. The workman knows that his foreman is the one he must satisfy; he realizes that if through carelessness or other cause he is found to be an unsatisfactory employee, his job is in jeopardy. It is ever an inducement, therefore, in his own interest to obey instructions.

"On occasions, for no apparent reason, men throw discretion to the winds, with the inevitable results. It is sometimes found that their momentary lapses are attributable to personal worries or defective health, or some condition entirely dissociated from their work, and we know that on the accident list can be found the names of workmen who previous to the date of their injury had exhibited a high standard of intelligence. The great bulk of accidents are the direct result of the failure of the human element.

"In a well-organized establishment, such as a modern railway shop, it is very rarely found that defective equipment is the cause of injury to workmen. Wise management requires that all machines be equipped with the most modern safety appliances and no effort or money is spared to make railway workshops as safe as possible for the workmen. We found, as we expected to find, however, that during periods of great pressure, when it is necessary to employ a large number of unskilled men in connection with particular work, the accident risk is intensified, and for the natural consequence of these conditions we have yet to find a satisfactory solution.

"In summing up the results of our experience, I think it can be said that the most effective measures for accident prevention in shops are the careful supervision of shop practices, the education of the men in the principles of safety, and the responsibility of the immediate officer in charge for efficiency of the men under him."

Organizing coal mining industry in Great Britain

The Coal Mines Bill which was introduced in the British House of Commons last December was outlined in the Labour Gazette, January, 1930 (page 41). Amendments were subsequently made in both Houses, and in the final form, in which it received the Royal Assent on August 1, the Act provides for the setting up by the Board of Trade of a Commission consisting of five members, one of whom is to be chairman, whose duty it will be to further the recognition of the coal mining industry with a view to facilitating the production, supply and sale of coal by owners of coal mines; and for that purpose to promote and assist, by the preparation of schemes or otherwise, the amalgamation of undertakings where such amalgamations appear to the Commission to be in the national interest.

Another amendment provides for a reduction, as from December 1, 1930, of half an hour in the maximum daily hours of work underground in coal mines, with the proviso that the Board of Trade may issue an order allowing the hours of work in any district to be calculated over a fortnight, instead of by the day, with a maximum daily extension for this purpose of half an hour. The Board may only make this order if an application is made to them by agreement between representative organizations of the coal owners and the workmen in the district with the approval of the Mining Association of Great Britain and the Miners' Federation of Great Britain.

The Board of Trade is also given powers of control in regard to the granting of financial assistance to branches of the industry, subject to the approval of Parliament.

Technical training of textile workers

The *Canadian Textile Journal,* August 28, declared that "the textile industry is the only major industry that has not taken advantage of the very excellent system of technical education developed in each of the provinces." Textile mills, the *Journal* continued, exist in over 300 towns and cities in Canada, employing about 52,000 workers, and representing practically every branch of textile manufacturing. Many of these towns and most of the cities have elaborate technical schools in which all manner of instruction, except in textile manufacturing subjects, is carried on. Workers in the textile mills, however, have been left to educate themselves, with the result that most of the advanced positions in the industry have had to be filled with men trained and educated outside Canada, where technical educational facilities in textile manufacturing have been provided. The writer asserts that technical training in textile manufacturing is a very difficult thing to obtain so far as the average Canadian youth is concerned, the result of which has been that even in textile manufacturing centres the children of the heads of various departments in the mills have rarely entered the industry for their life vocation.

"Technical schools," the *Journal* points out, "are available in almost every textile centre, and the provision of textile classes in some form or another in every one of these schools should not be a very difficult matter. It is necessary, however, that the industry should recognize the necessity for development of these facilities. It is purely a matter for the industry to handle itself, at least so far as providing the required impetus to the movement. . . . . First it is necessary to develop a technical organization within the industry which will take hold of the work of starting textile classes in the technical school and obtaining a favourable attitude on the part of technical school authorities towards textile instruction. The writer has been informed on numerous occasions by the principals of textile schools located in a number of textile centres that all that was needed was the co-operation of the local mills in getting such classes started. With the help of a Technical Association supported by the industry, it is quite conceivable that every mill executive in Canada would very shortly become interested in its own local situation, and with the help of such a central organization would find it both feasible and practicable to start such classes locally."

It may be noted that in 1920 the Department of Labour corresponded with certain textile manufacturers with a view to securing the co-operation of the industry in providing textile instruction under the provisions of the Technical Education Act, but at that time the proposal failed to receive the required support and no textile classes were formed in any province.

Industrial development in Manitoba

The annual report for 1929 presented at the recent annual meeting of the Industrial Development Board of Manitoba, points out that general production in the province reached the highest peak in its history during that year. In 1929 the estimated gross value of output was $165,000,000, the total number of plants being 930, and the number of employees being 29,000, with a payroll of about $35,000,000. Mr. W. H. Carter, the chairman of the Board in the course of his address described some of the characteristic features of industry in the provinces as follows:—

"Manitoba is not a province of large industries; by far the great majority of our plants are small concerns. Almost half of them employ less than five hands, and 217 employ an average of 10 each. Only 39 employ more than 100. In this latter group, 23 employ an average of 146; 12 an average of 284; and 4 an average of 1,316. But I want to point out that from a labour standpoint Manitoba industries, per factory, employ more men than in the average Canadian plant, or 26·6 as against the Canadian average of 25·6. This is one point greater than the average of Quebec, and only four points less than the average of Ontario. Industrial growth, therefore, has been distinctly advantageous to labour, and an important factor in relieving the unemployment situation here."

The Industrial Development Board of Manitoba was formed at Winnipeg in 1924 (Labour Gazette, April, 1924, page 309), some labour representatives serving on the organizing committee along with representatives of industry, agriculture, the municipalities and education. Subsequently the provisional legislature made substantial grants in aid of the work of the Board (Labour Gazette, May, 1925, page 461).

Regulation of loads of merchant ships

Important safeguards for life and property at sea are provided for in an international convention recently signed at London on behalf of Canada for the purpose of regulating the load line of merchant ships. The convention was arrived at a conference which lasted from May 20 to July 5, and at which Canada was represented by Mr. Alexander Johnston, Deputy Minister of Marine, assisted by four technical advisors.

The agreement divides the oceans of the world into zones according to the hazards of weather conditions, and specifies the extent to which vessels may be loaded in the different zones. No less than thirty nations participated in the conference and signed the convention. It is to come into effect on July 1, 1932, provided that at least five nations have ratified and deposited their ratification with the British Government.

If and when the convention comes into effect, every ship plying the seas except ships of war, ships engaged solely in fishing, pleasure yachts, ships not carrying cargo or passengers and ships of less than 150 tons gross will be required to have an "international load line certificate" issued under the authority of one of the governments which adhere to the convention. The certificate will be issued only after inspection by a surveyor and at the time of issuance the load line for different zones and different seasons recognized in the convention are to be marked on the side of the ship as well as set forth in the certificate. The rules by which surveyors are to determine the respective load lines of different ships are set forth in detail in the convention. The agreement does not apply to Great Lakes or other inland waters.

Mr. Johnston recommends the adoption of the convention by the Canadian Government. He expressed the opinion that if it is adopted by all governments it will be "another great advance along the line of making more safe the lives of those who for business or pleasure travel by sea, and in a very especial manner the lives of the officers and men of the merchant marine service." It will in addition remove differences that hitherto obtained in the matter of shipping at various world ports, and to that extent facilitate the movement of overseas commerce.

Vocational rehabilitation in Illinois

The Industrial Commission and the Division of Rehabilitation of the Illinois State Board for Vocational Education recently arrived at an agreement for closer co-operation in caring for persons injured in industrial accidents who stand in need of vocational rehabilitation. According to the terms of the agreement, the Industrial Commission is to furnish the Division of Rehabilitation with certain pertinent information regarding all cases which the Commission deems eligible for vocational rehabilitation. A person is to be deemed vocationally handicapped when his physical disability prevents him from following his former occupation. The Commission is also to furnish, upon request, any available supplementary information on those cases which have been reported, and is to confer with the Rehabilitation Division on matters pertaining to such cases. The Rehabilitation Division will inform the Commission of any complaints or misunderstandings received from disabled persons concerning the receipt of compensation, and is to confer with the Commission with regard to any of the cases covered by the agreement of co-operation. Upon request, the Division will report to the Commission concerning the services it has rendered to those injured persons reported by the Commission.

The co-operation between the Industrial Commission and the Division of Rehabilitation will result, it is expected, in increasing the effectiveness of the vocational rehabilitation work now being done by the Division of Vocational Rehabilitation, particularly where persons are disabled by industrial accident, and will also serve to keep the Industrial Commission more closely in touch with the recipients of workmen's compensation in vocational rehabilitation cases.

The vocational rehabilitation of persons injured in industry was begun in 1921. In that year the State embarked upon a plan of co-operation with the Federal Government, the State devoting money to match a federal grant in aid of such work. The co-operative agreement has been continued since that time, and the Federal Government has recently appropriated money to continue the rehabilitation work during the next three years. Forty-four of the states are now co-operating with the Federal Government in this work.

The Federal scheme was outlined in the LABOUR GAZETTE, July, 1927, page 702; August, 1925, page 786.

A useful consolidation of the Ontario Workmen's Compensation Act, with amendments to 1930, and Regulations of the Board, has been published at Toronto. An introductory chapter summarizes the provisions of the Act and outlines the Board's methods of work. The book is furnished with a complete index, which adds to its value as a work of reference.

The Crane Company of Chicago has announced a stock distribution of four million dollars to employees with ten years' or more service. The stock is a personal gift from the President of the company and the third he has made since 1926, the total distribution amounting to more than $10,000,000. Each employee of ten years' standing will receive ten shares of stock and one additional share for every year over ten. The market value of the shares at the time of announcement was $43.

The provisions of the Mothers' Allowances Act, passed by the Legislature of Nova Scotia at its recent session, were outlined in the last issue of the LABOUR GAZETTE, (page 915). The Act is administered by the Director of Child Welfare, acting under a minister designated by the Lieutenant Governor in Council, assisted by an Advisory Commission of not less than three members, two of whom are women. By an Order in Council dated August 1, 1930, the members of the Advisory Commission were appointed, to serve for a period of one year, as follows:—Mr. Peter F. Moriarty, of Halifax; Mrs. Helen Stayner, of Halifax; Mrs. Ellen E. Frawley, of Halifax; and Mrs. Elizabeth K. Bell, of New Glasgow.

A national maternity service for Great Britain is recommended in an interim report recently issued by the departmental committee set up in 1928 by the Right Hon. Neville Chamberlain, then Minister of Health, to consider the question of maternity mortality and morbidity. This committee has found that almost half the maternal deaths in the country are directly preventable.

The *Saskatchewan Gazette*, September 6, 1930, announces the appointment of Mr. Alfred Higgin, of Saskatoon, to be a member of the Workmen's Compensation Board under the Act of 1928. The appointment of Mr. Netson R. Craig, K.C., as chairman of the Board, was noted in the LABOUR GAZETTE, December, 1929, page 1323.

The British Ministry of Labour recently prepared a draft special order by which the Minister of Labour proposes to apply the Trade Boards Acts of 1909 and 1918 to the catering trade. If this Trade Board is set up, statutory minimum wages and the normal length of the working day will be fixed for about 200,000 persons employed in restaurants, tea and dining rooms, and public houses. Caterers consider that the character of their business makes a precise regulation of working hours impracticable.

Right of Association in Japan

At the present moment the situation as regards trade unionism in Japan is this: By Article 29 of the Constitution of 1889, the right of association is formally guaranteed "within the limits of the law." There is no law in Japan which prohibits trade unionism or formally restricts the freedom of action of trade unions. On the other hand, there is no special law which confers on trade unions any legal status or recognition. In practice, a large number of trade unions exist and they exercise an increasing amount of social, economic and even political influence. But they move and have their being solely in virtue of the general guarantee embodied in the Constitution, and complaints are heard not infrequently—sometimes in the International Labour Conference—that hindrances are placed in the way of the natural progress of their activity.

For the last ten years, this question has occupied a prominent place in Japanese politics and many efforts have been made by Governments and other bodies to secure the passing of legislation. About five years ago, the Bureau of Social Affairs drafted a Bill providing for the recognition of trade unions and defining their status and rights. The Bill was described at the time as "extremely radical", and it was immediately criticised vigorously by the leading employers' organizations. The present Japanese Government has announced that a Bill which is based on the proposals of the Bureau of Social Affairs will be introduced at the next session of Parliament. In the meantime opposition to it and support for it are being organized and made articulate.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of August was reported by superintendents of the Employment Service of Canada to be as follows:——

Crop prospects in the Province of Nova Scotia were fair, though slightly under the average for the entire province, due to the drought which had prevailed throughout Western Nova Scotia. The apple crop, while less than last year's, was said to be of better quality. Good catches of fish were reported. Lumber operations were somewhat quiet. Manufactures were busy, as were also foundries, machine shops, saw mills, and woodworking factories. Larger construction jobs were nearing completion, and no new work of any importance was scheduled for the immediate future. Highway construction was progressing favourably. Miners in the New Glasgow district were well employed, and a large amount of coal was hoisted and shipped. Salt mines were also very busy and showed a steadily increasing business. At Sydney and Glace Bay, mines were only in operation from three to five days a week. Trade showed improvement, and transportation, both freight and passenger, was exceptionally good. In the Women's Division, there was a heavy demand for day workers and domestics, with difficulty in meeting all requirements.

Crop prospects in the Province of New Brunswick were good, with the city markets heavily stocked with produce and prices reasonable. The fishing industry reported good catches. Logging was quiet, and lumber operations for the coming winter none too promising, owing to over-production and low markets. Manufacturing was slowing down, some mills already having been closed and others shortly expected to do so. Continued fine weather aided outside construction, which showed considerable activity, especially in Saint John. Inside work was also progressing favourably, and road construction continued to provide work for a fair number of men. Traffic, both passenger and freight, was brisk, and trade was good, with collections fair. A moderate demand for women domestic workers was registered at the offices with placements completed accordingly.

Orders for farm help were scarce in the Province of Quebec, and only a few placements were made in this group. Woodsmen were in demand in some localities, and a slight increase was recorded in the number of bushmen and mill hands placed. Manufacturing in general showed a slight improvement, as Montreal reported activity in boot and shoe factories, also amongst cigar and tobacco workers, with conditions amongst clothing workers likewise satisfactory. Textiles, however, were quiet, and there was no revival of activity in the metal trades. Building construction in the City of Quebec was very favourable, but in Montreal, the situation was somewhat quieter, though several buildings were in the course of construction, and a few painters and carpenters were being placed. Building labourers, however, were not in keen demand. Placements in longshore work were also reported by cities with harbour facilities. Trade was quiet except in Montreal, where tourists were greatly in evidence. In the Women's Domestic Section no exceptional activity was reported. On the whole, however, there appeared to be slight improvement in the general labour situation throughout the province.

With many experienced farm hands available, the demand for help in the agricultural districts of Ontario was very small. Throughout the fruit belt fruit pickers, however, were in demand, and these were readily supplied. Quietness prevailed in the logging industry, with prospects for the future none too bright as far as bush work is concerned. Many miners were available, but there were few changes in mine staffs, and no likely increase in the working force until late fall. While in some localities factories continued to work steadily, the great majority of industrial plants showed anything but a satisfactory condition of affairs with no indication of much improvement. Sawmills and pulp and paper mills in the North also showed reduced activity, and were either working on short time or were closed entirely. Building construction was progressing favourably in some centres, while others reported that though a fair number of men were employed, there was not enough work to supply all unskilled men seeking employment. Placements in the Women's Domestic Section showed improvement, and practically all casual workers who applied were sent out.

In the agricultural industry in the Province of Manitoba excellent progress in grain cutting was reported, with a good percentage of the crop already threshed. Though rust, heat and drought had caused considerable damage in some parts, the yield on the whole was better than expected. Building permits to the value of $300,000 were issued in Winnipeg at the close of the month, and tenders had

been called for additional projects. Highway construction offered some employment but railways were quiet. Other groups showed little activity, and the labour movement, as is customary at this season, was confined largely to the placement of harvest workers. Trade was normal, but collections slow. The demand for women domestic workers continued, and a fair number of placements were made.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

		1930			1929

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

As in the other Prairie Provinces, the outstanding feature of the situation in Saskatchewan was that concerning harvest labour. A shortage of help prevailed in many parts, which resulted in a number of unfilled orders on hand for harvesters. Elsewhere the demand was being met by transient labour. While building construction showed little activity, there was a fair call for highway and railway labour, especially teamsters. In many cases, however, it was difficult to meet the demand, owing to the fact that the men preferred harvest work. Other groups were reported as quiet. There were numerous requests for help in the Women's Domestic Section, some of which could not be filled owing to the shortage of applicants, but at Moose Jaw there was no difficulty experienced in filling all orders received.

With favourable weather conditions prevailing, harvesting in the Province of Alberta had made considerable progress and threshing was well under way. Available harvest help in some localities had become somewhat scarce, but no shortage was expected. With the exception of building projects already started, nothing of note was planned for the immediate future. There were only a few calls for railway labourers, which were easily filled. Both logging and mining remained quiet, with practically no demand for men. Few vacancies were listed for female cooks for threshing outfits, but a shortage of help prevailed for farm homes. Throughout the province there was a surplus of available labour to meet the demand for general work, most of which consisted of married men living in the cities.

Fruit gathering throughout the Province of British Columbia appeared to be well under way, with a plentiful supply of produce available. Otherwise, there was little demand for farm help, threshing being practically completed. Very little improvement was shown in logging, a few men having been sent out to fight forest fires. There was no demand for miners, and the outlook is poor. Manufacturing also was quiet. Little building construction was in progress throughout the province, though the Canadian Hydro and Power Line were erecting a power line to Oyama, while work on the South Forks Dam continued, and some road construction and repair work was being carried on. There was little activity amongst longshore workers. Trade was fair. With the exception of additional help sent to the fruit canneries, the Women's Domestic Section was somewhat quiet. Throughout the province unemployment conditions showed only temporary relief, due to harvest and fruit picking activities, and in many localities employment for men seeking work was still a vital problem.

Employers' Reports

Employment at the beginning of August showed very little general change, according to statements tabulated by the Dominion Bureau of Statistics from 7,357 firms, whose payrolls aggregated 1,042,710 persons, as compared with 1,043,881 on July 1. The index number stood at 118·8 on the date under review, as compared with 118·9 on July 1, 1930 while on August 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, it was 127·8, 119·3, 110·5, 105·5, 97·5, 95·8, 101·4, 94·2, and 90·0, respectively.

Greater activity was indicated in the Western Provinces, the Maritimes reported no general change, while employment declined in Quebec and Ontario. In the Maritime Provinces, construction showed important gains, and shipping, services and manufacturing was also brisker; on the other hand, the trend of employment was seasonally downward in logging. In Quebec, manufacturing, logging, construction and trade reported smaller payrolls, while other industries showed only slight changes. In Ontario, the greatest improvement was in construction and transportation, but manufacturing, logging and trade registered reductions. In the Prairie Provinces, the most pronounced expansion was shown in highway construction, but mining, building construction and communications were also more active. In British Columbia, continued gains were registered, chiefly in manufacturing, but also in transportation and construction, while logging showed considerable reductions.

Employment increased in Quebec, Ottawa, Winnipeg and Vancouver, while the tendency was unfavourable in Montreal, Toronto, Hamilton and Windsor and the Adjacent Border Cities. In Montreal, employment showed a further and larger decrease, contrasting with the increase recorded on August 1, 1929, when the index was higher. Transportation and construction registered decided improvement, while manufacturing and trade released employees. In Quebec, the situation continued to improve, particularly in construction. In Toronto, there was a falling-off in activity on August 1, 1930, repeating the downward movement noted on the same date of last year. Manufacturing (especially of iron and steel and textile products), services and trade were slacker than on July 1, but construction recorded improvement. In Ottawa, employment showed an advance, mainly in construction and manufacturing. In Hamilton, manufacturing registered general curtailment, that in iron and steel plants being most

pronounced; on the other hand, construction afforded greater employment, and there was slight improvement in trade. In the Border Cities, further losses were shown, largely in automobile works, while construction was also slacker. In Winnipeg, there were general increases in construction and transportation. The improvement evidenced on the corresponding date of last year was more pronounced, and the index then was higher. In Vancouver, manufacturing and transportation reported heightened activity, while services and trade were somewhat slacker.

Further reductions were made in manufacturing establishments; increases were recorded in food, pulp and paper, non-ferrous metal and electric current plants, but the rubber, textile and iron and steel industries were seasonally slacker. Employment also showed decided gains in mining, communications, transportation and construction and maintenance, while seasonal dullness continued to affect employment in logging camps, and there were also losses in trade and services.

An article elsewhere in this issue gives in greater detail the employment situation as at the beginning of August, 1930.

TRADE UNION REPORTS

Improvement in the local trade union situation was indicated at the close of July from the previous month, the 1,676 labour organizations from which reports were tabulated with 200,122 members showing an unemployment percentage of 9·2, contrasted with 10·6 per cent of idleness in June. Noteworthy curtailment of activity, however, was shown from July last year when 3·0 per cent of the members reported were idle. Quebec unions registered the most substantial gains in employment when compared with June, largely due to the better conditions prevailing in the garment trades, though in the Prairie provinces and New Brunswick also the tendency was slightly upward. Employment for Nova Scotia unions, on the contrary, was somewhat retarded and nominal reductions occurred among Ontario and British Columbia unions. In all provinces a lower level of activity was maintained than in July last year, Nova Scotia and New Brunswick unions reporting a moderate drop in the volume of work afforded during the month reviewed and the remaining provinces contractions on a somewhat larger scale.

A review in greater detail with tabular statements on unemployment at the close of July, 1930, as indicated by local trade unions, is printed on another page of this issue.

EMPLOYMENT OFFICE REPORTS

During the month of July, 1930, the offices of the Employment Service of Canada made 26,169 references of persons to positions and effected a total of 25,293 placements. Of these the placements in regular employment were 15,895, of which 11,811 were of men and 4,084 of women. Placements in casual work numbered 9,398. The offices of the Service were also notified of 26,150 vacancies, of which 17,722 were for men and 8,428 for women. Applications for work were registered from 29,479 men and 12,545 women, a total of 42,024. Business transacted during July, 1930, showed a slight gain in applications and placements, and a minor decline in vacancies as compared with the work of June, 1930, but a loss was shown in all transactions in comparison with those of July a year ago, the reports for June, 1930, showing 26,221 vacancies offered, 40,895 applications made, and 24,884 placements effected, while in July, 1929, there were recorded 36,852 vacancies, 46,183 applications for work, and 34,447 placements in regular and casual employment. A report in detail of the work of the offices for the month of July, 1930, may be found elsewhere in this issue.

BUILDING PERMITS AND CONTRACTS AWARDED.

According to the monthly report, prepared by the Dominion Bureau of Statistics the value of permits issued in 61 cities during July, 1930, was $15,730,964 as against $17,935,478 in the preceding month, and with $22,702,584 in July a year ago.

Production and Trade

INDUSTRIAL PRODUCTION

Figures showing the volume of production in certain industries during recent months, and also in the corresponding months last year, are shown in the table on page 1004.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that business continued in a depressed condition in July, operations in general being at slightly lower level than in June. Employment in industrial pursuits showed a moderate curtailment on August 1, contrary to the normal tendency for the season. The output of manufacturing plants was at a slightly lower level in July measured by an index based on the volume of production of sixteen commodities. The production of newsprint was in moderately greater volume than in June, and the imports of crude rubber

indicated preparation for increased operations in tire factories. Automobile production was at a low level, and the primary iron and steel industry curtailed operations. The output of electric energy indicated contraction in plants using power generated by the central electric stations. The output of the metal mining industry was at a higher level than in June, indicating that operations were being maintained despite low prices for silver and base metals.

Coal.—Canada's coal production during July amounted to 1,061,091 tons, a decrease of 11·4 per cent from the 1925-1929 average for the month of 1,197,317 tons. The output of bituminous coal in July was 915,231 tons; of sub-bituminous coal, 45,642 tons; and of lignite coal, 100,218 tons. Mines in Nova Scotia produced 562,221 tons; in New Brunswick, 16,056 tons; in Saskatchewan, 20,101 tons; in Alberta, 323,549 tons; in British Columbia, 139,050 tons.

During July, Canada imported 1,781,183 tons of coal as compared with 1,790,034 tons, the average for the month during the past five years. The July importations of anthracite amounted to 310,870 tons, consisting of 56·7 per cent from the United States, 34·5 per cent from Great Britain, and 8·8 per cent from Russia. Receipts of bituminous coal totalled 1,469,324 tons, of which tonnage the United States contributed 98 per cent; the remainder was obtained from Great Britain and Newfoundland. Lignite coal imports of 989 tons came from the United States.

Exports of Canadian coal were recorded at 23,554 tons, a considerable falling-off from the July five-year average of 58,122 tons. Coal made available for consumption in Canada during July totalled 2,818,720 tons, a decline of 3·8 per cent from July, 1925-1929 average of 2,929,199 tons. The current month's total included 1,037,537 tons of Canadian coal and 1,781,183 tons of imported coal.

Iron and Steel.—Production of pig-iron in Canada during July at 64,676 tons was the lowest tonnage reported for any month of the present year, the rate of output being back again to that of February, 1928, when production amounted to 64,691 tons. In the previous month, 66,081 tons were produced and in July of a year ago the quantity was 99,786 tons. Compared with the figures for June, data for July showed a decline in the output of basic iron to 42,498 tons from 45,349 tons and an increase in the output of foundry iron to 22,178 tons from 20,732 tons. No malleable iron was produced in either month.

Production in ferro-alloys in Canada amounted to 3,334 tons in July, a decline of 70 per cent from the record which was established in the previous month at 11,059 tons. For the year to date the output totalled 48,294 tons, an increase of 11 per cent and 67 per cent over corresponding periods of 1929 and 1928 when quantities were quoted at 43,623 tons and 28,869 tons, respectively.

Production of steel ingots and direct steel castings in Canada during July at 68,424 tons was the lowest tonnage reported since October, 1927. It was 28 per cent under the total of 95,321 tons in June and 47 per cent less than the 129,827 tons made in July, 1929. The decline from the previous month was mostly in steel ingots, the tonnage of which dropped to 65,144 from 91,694, while steel castings also dropped slightly to 3,280 tons from 3,627 tons.

External Trade

A summary of Canadian trade by the Department of National Revenue shows that in July, 1930, the merchandise entering Canada for consumption amounted to $84,550,935, as compared with $91,543,981 in the preceding month and with $114,200,854 in July, 1929. The chief imports in July, 1930, were: Iron and its products, $18,626,532; Non-metallic minerals and products, $14,654,200; Fibres, textiles and textile products, $11,491,222.

The domestic merchandise exported during July, 1930, amounted to $76,407,506, as compared with $78,703,281 in the preceding month and with $102,219,440 in July, 1929. The chief exports in July, 1930, were: Agriculture and vegetable products, mainly food, $24,707,960; Wood, wood products and paper, $22,280,522; Non-ferrous metals and their products, $9,499,596.

Strikes and Lockouts

The time loss due to industrial disputes in August, 1930, was appreciably less than that occurring during July, 1930, and approximately only one-quarter as many workers were involved. As compared with August, 1929, the figures for August, 1930, show that only three strikes occurred during the month as compared with ten during the same month last year, the number of workers involved and the time loss incurred showing a similar abrupt decline. There were in existence during the month three disputes, involving sixty-five workers and resulting in a time loss of 484 working days, as compared with six disputes involving 240 workers and resulting in a time loss of 2,600 working days during July, 1930. In August, 1929, there were on record ten disputes, involving 957 workers and resulting in

a time loss of 3,217 working days. At the end of the month there were no disputes recorded as strikes or lockouts. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off, or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again lower at $10.65 for August, as compared with $10.91 for July; $11.63 for August, 1929; $11.08 for August, 1928; $10.93 for August, 1927; $11.10 for August, 1926; $10.84 for August, 1925; $10.19 for August, 1924; $10.53 for August, 1923; $10.44 for August, 1922; $11.44 for August, 1921; $16.92 for June, 1920 (the peak); $13.41 for August, 1918; and $7.68 for August, 1914. Of the twenty-nine foods included in the budget twenty-one showed declines, the most important of which occurred in the prices of beef, veal, mutton, lard, milk, butter, bread, flour, prunes, sugar, tea and potatoes. The prices of fresh and salt pork and of eggs were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged $21.01 at the beginning of August, as compared with $21.26 for July; $21.90 for August, 1929; $21.31 for August, 1928; $21.11 for August, 1927; $21.32 for August, 1926; $21.05 for August, 1925; $20.57 for August, 1924; $21.03 for August, 1923; $20.88 for August, 1922; $21.98 for August, 1921; $26.92 for July, 1920 (the peak); $21.20 for August, 1918; and $14.41 for August, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, continued toward lower levels, being 84·1 for August, as compared with 85·8 for July; 98·1 for August, 1929; 95·4 for August, 1928; 102·1 for August, 1927; and 98·6 for August, 1926. In the classification according to chief component materials seven of the eight main groups were lower, while one showed a slight increase. The groups which declined were: the Vegetables and Vegetable Products group, due to lower prices for barley, flax, wheat, flour, rubber and raw sugar, which more than offset higher prices for corn, rye, bran and shorts; the Animals and their Products group, due mainly to lower prices for steers, lambs, canned salmon and beef hides, which more than offset higher prices for butter and eggs; the Fibres, Textiles and Textile Products group, due to lower prices for cotton, worsted cloth yarns and wool; the Wood, Wood Products and Paper group, because of easier quotations for certain lines of lumber; the Iron and its Products group, mainly because of lower prices for scrap cast iron and steel tank plates; the Non-Ferrous Metals group, due to declines in the prices of aluminium, electrolytic copper and copper wire bars, which more than offset advances in the prices of silver, lead and antimony; and the Chemicals and Allied Products group, due to declines in the prices of nitric acid, copper sulphate and shellac. The Non-Metallic Minerals and their Products group advanced slightly.

Five-day Week in Great Britain

An increased practice of the five-day working week in Great Britain is reported in the annual report of the Chief Inspector of Factories and Workshops for 1929. The previous year's report noted (LABOUR GAZETTE, —September, 1929, page 1,001) that individual firms engaged in a very wide range of industries had adopted the 5-day week system. The report for 1929 states that the shorter week was adopted as a normal practice by some additional firms, and that it continues in those factories where it has once been seriously adopted. The new system is more often found in cases where workers have to travel long distances to their work, than where they live around the factory. Sometimes it is necessary to revert temporarily to Saturday work owing to pressure of orders. A case quoted in the report of a large engineering firm which reduced their working days from 47 to 43 hours the 43 hours being worked in five days. They found that, after a few weeks, production definitely went up, improvement being shown not only in the output per hour but also in the total output per week.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF AUGUST, 1930

DURING the month of August the Department received the majority and minority reports of the Board of Conciliation and Investigation established to deal with the disputes involving the question of wages and working conditions between the Winnipeg Electric Company and certain of its employees, being (1) motormen, conductors and busmen, members of the Street Railway Employees' Unit of the One Big Union; (2) Mechanical Department employees; and (3) trackmen. A separate unanimous report was also received dealing with the alleged wrongful dismissal from the service of the Winnipeg Electric Company of three employees.

Application Received

An application for the establishment of a Board of Conciliation and Investigation was received during August from certain employees of the Master Plumbers and Steam Fitters of Saint John, N.B., affiliated with the Canadian Construction Association, being members of Local No. 574, United Association of Journeymen Plumbers and Steam Fitters of the United States and Canada. The dispute related to the employees' request for an increase from 75 cents to 80 cents per hour as from July 31, 1930, the number of employees affected being fifty directly and from 500 to 700 indirectly. The employers agreed to refer the dispute to a Board of Conciliation and Investigation and a Board was accordingly established, composed as follows: Reverend C. Gordon Lawrence, Saint John, N.B., chairman, appointed on the joint recommendation of the other Board members, Messrs. John N. Flood, and F. S. McMullin, both of Saint John, the employers' and employees' nominees respectively.

Other Proceedings Under the Act

Reference was made in last month's issue of the Labour Gazette to the establishment of a Board of Conciliation and Investigation to deal with the dispute between the Hydro Electric Commission of the City of Hamilton and certain employees, members of Local No. 138, International Brotherhood of Electrical Workers, and to the appointment of Mr. Fred Bancroft, of Oakville, Ontario, on the recommendation of the employees. During the month the personnel of the Board was completed by the appointment of Mr. L. B. Spencer, K. C., of Welland, Ontario, Chairman, and Mr. J. B. Carswell, Managing Director of the Burlington Steel Company, Hamilton, Ontario, nominee of the employer. The chairman was appointed by the Minister in the absence of a joint recommendation from the other two members of the Board.

Reports of Board in Disputes between Winnipeg Electric Company and Its Employees

Reports were received by the Department giving the findings of the Board of Conciliation and Investigation established to deal with the disputes involving the question of wages and working conditions between the Winnipeg Electric Company and certain of its employees, being (1) motormen, conductors and busmen, members of the Street Railway Employees' Unit of the One Big Union; (2) Mechanical Department employees; and (3) trackmen. The report was signed by the Chairman, The Honourable Mr. Justice W. J. Donovan, and Mr. C. E. Dafoe, the company's nominee on the Board. A minority report was submitted by Mr. R. B. Russell, the Board member appointed on behalf of the employees.

A unanimous report was also received in the Department concerning the alleged wrongful dismissal by the Winnipeg Electric Company of three employees. In connection with this report the application mentioned in the July issue of the Labour Gazette as having been received from the motormen, conductors and busmen with respect to the alleged wrongful dismissal of three employees was referred to the Board already established to deal with the disputes involving the question of wages and working conditions. The Board member in the person of Mr. C. E. Dafoe, who was appointed on the recommendation of the company to deal with the three original cases, having declined to act on the Board in this dispute, owing to the company refusing to formally associate itself with the matter, Mr. Theo. A. Hunt, K.C., was appointed by the Minister in substitution for Mr. Dafoe.

The texts of these reports are given below.

Report of Board

To the Honourable the Minister
of Labour,
Ottawa,
Canada.

The Board of Conciliation, established on the 3rd day of July, 1930, under The Industrial Disputes Investigation Act, R.S.C. 1927, to deal with the applications of certain employees of the Winnipeg Electric Company for amendments to their agreement in respect of wages and working conditions, begs to report as follows:—

Applications first leading to the establishment of a Board of Conciliation were:

Firstly: The motormen, conductors and busmen, whose cause of dispute, claims or demands, were for an amended agreement in respect of,

(1) Sunday wage and hour schedule;
(2) Twelve (12) days' holidays with pay;
(3) Restoration of motorman and conductor (i.e. two-man cars) on all cars excepting on stub lines;
(4) Time allowance for pull-in and pull-out at two of the storage yards;
(5) Seniority on all runs controlled by the Company, or any of its subsidiaries;
(6) Maximum number of sign-ups that the Company can claim without payment for time involved by men in signing up, to be arranged, and that motor bus runs be signed up at each general sign-up.
(7) No charge for uniforms supplied to men with service of two years or over;
(8) Cutting down of spread-time from thirteen (13) hours to eleven (11) hours;
(9) Extension of time and opportunity for training of motor bus operators to twelve (12) months, and such training to be open to all men according to seniority;
(10) Amendments to Miscellaneous Rules dealing with working conditions;
(11) Transportation privileges to employees;
(12) Grievance clause in respect of affiliations.

Secondly: The Mechanical Department employees brought forward several causes of dispute, claims or demands, in addition to the common claim of holidays with pay, and of a grievance clause in the agreement dealing with the restrictions on the right to affiliate and associate in union activity with other unions of men or associations.

In their application they in effect sought to obtain reduction of hours per week and an increased wage to compensate therefor, also increase in pay for air brake repair men.

Thirdly: The Track Department employees, in addition to asking for removal of the grievance clause, demanded,

(*a*) Wage increases;
(*b*) Holidays with pay;
(*c*) Forty-four (44) hour week;
(*d*) Overtime rates;
(*e*) Additional pay for night work;
(*f*) Transportation privileges;
(*g*) Grievance clause in respect of affiliations.

Beginning with the organization meeting held on the 4th of July, 1930, meetings were held with slight intervals throughout the month, and many exhibits dealing with the matters in dispute were filed by the Company, tending to show its relationship with its employees and its present financial position; and written briefs, supported by some exhibits, were also submitted by the employees.

The case for the applicants was presented chiefly by Mr. Alex. Hume, the General Secretary of the One Big Union, Mr. Edward Armstrong, Mr. Samuel Cartwright, Mr. Neil S. McLean and several other representatives, including Mr. John Lowesky and Mr. Peter Koshman, who attended and gave the Board information and the benefit of their views. The Company was represented by Mr. C. H. Dahl, Vice-President in charge of operations, Mr. Lawrence Palk, Vice-President in charge of executive matters, Mr. R. R. Knox, Assistant General Manager, and several representatives of the particular departments of the Company affected by the application.

We are pleased to report that both parties to the dispute gave evidence throughout all the discussions of a desire to conciliate, with the result that the great majority of the items in dispute were disposed of by agreement, and our understanding of the agreement effected in reference to such matters of dispute, as itemized above, are as follows:—

Re No. (4). The men agree to withdraw this claim and allow the clause in the agreement in respect of time allowances for pull-in and pull-out to stand, it appearing that some off-setting advantages were being allowed by the Company to the men under this part of their present agreement.

Re No. (5). Agreement was arranged on the basis that seniority rights were to apply on established runs where the men have seniority, this provision to include the Headingly line.

Re No. (6) The Company agreed to four general "sign-ups" and four divisional "sign-ups"; and between general "sign-ups", to postpone as far as possible subsequent divisional "sign-ups".

The Company is willing to include bus runs in the general "sign-up", provided men pay licence fees. Otherwise, we recommend that the provision for bus sign-ups once a year about January 1st remain as it is at present.

Re No. (7). Uniforms: It was agreed that a clause be inserted in the agreement as follows:—

"A man who leaves the service of his own accord or is discharged within four months after receiving a uniform is to pay for the uniform, less $2.50 for each month that it has been used in the Company's service, *except* that a man, who has been five or more years in the Company's service and who is *discharged,* shall be allowed to keep his uniform without charge."

"A man who has used a uniform in the Company's service (other than the first uniform, half the cost of which he pays as herein provided) four months or more shall be permitted to keep it without further charge, if he leaves the service for any cause."

"All brass buttons to be turned in."

Re No. (8). The claim to a reduction in spread-time was settled by the following provision:—

"No run shall exceed a 13-hour spread and the Company will, to the best of its ability, endeavour to keep the spread down as low as possible."

"Not more than 10 per cent of schedule runs shall be three piece runs, and not less than 60 per cent of the total runs shall be within eleven hours."

Re No. (9). The claim to an extension of time and opportunity for training was settled by acceptance by the men after discussion of an offer made by the Company in the following terms:—

"All men required to operate motor buses in regular City fare zone and on St. Mary's Road shall be taken from the seniority list and, in order to enable men on the street cars to train for motor bus operation, the Company will give fifty applicants, on a seniority and efficiency basis, an opportunity to train and qualify between June 1 and September 30, 1930. It shall not be necessary to have previously operated a gear shift car in order to qualify. All men required to operate motor buses shall, according to seniority, have the privilege of signing up on bus routes, where seniority now exists, once a year, as near as possible to January 1."

Re No. (10). Miscellaneous Rules:

(*a*) After a lengthy discussion, it appeared in view of the two widely separated periods in each day at which the peak load of traffic appeared, that it was not reasonably to be expected that employees should not be required to work more than five hours at a shift, but we understand that in the future, as in the past, the matter of an improved schedule of runs will have the attention of the Company to suit the reasonable convenience of its employees.

(*b*) On the representation of representatives of the Company that loops were being installed to replace "Y's" as speedily as possible, and that men were being provided for the rear end of cars when backing up at car houses, any further request by the men in this connection was waived.

(*c*) The request of the men for additional facilities for the purchase of tickets was met by the Company agreeing to investigate the plan of having tickets for sale during regular office hours at the main office, and if it were found that a reasonable number of men would be convenienced thereby, that such a plan would be arranged.

Re (*d*). It was agreed that the application for a 20 minute lunch period should stand over until such rearrangement of the spread-time might be worked out as would allow for a lunch period and still meet conditions in a satisfactory manner.

Re (*e*). The Company having reported on the work now being performed to provide better lavatory accommodation, the men agreed to accept that report and the undertaking of the Company.

Re (11) and (*f*) of employees of Track Department:

The claim to additional transportation privileges to the men in each class making this demand was met by the Company agreeing to, and the men accepting, an amendment to their schedule to be in the following terms:—

"Employees covered by this Agreement who are in uniform or who produce a badge or pass furnished by the Company shall be granted free transportation on all street car lines of Winnipeg Electric Company and City bus lines. The Company undertakes, however, to procure for the employees free transportation over the car lines of the Suburban Rapid Transit Company between Winnipeg and Deer Lodge, and the bus lines of the Suburban Rapid Transit Company between Deer Lodge, St. Charles and Headingly, also the car lines of the Suburban Rapid Transit Company on the south side of the Assinobine River if the car lines are replaced by bus lines, and over the Winnipeg, Selkirk and Lake Winnipeg Railway lines upon application being made to the general office, the maximum number of trip passes on any one line on any one day to be twenty, such passes good any day including holidays with the proviso that on holidays they will be granted subject to the discretion of the management."

Re Mechanical Department:

It was agreed between the parties that the Company would pay and the men accept as

satisfactory the arrangement whereby air brake repairmen would henceforth be paid at the rate of 65 cents per hour.

Re (D) of Trackmen's Department:

The night work claim of men in this department was settled by agreement, as follows:—

"Day gang transferred to night work shall be paid time and a quarter for the first night so worked and straight time shall be paid for each succeeding night."

On the claim made by the same unit (Trackmen) in respect of weekly hours of labour and overtime, it was agreed that there should be no overtime allowed or claimed until 48 hours had been put in, and further, that for the summer period of April 15 to October 15, the regular weekly hours should be 48, and for the balance of the year 44, and that no overtime would be allowed until 48 hours had been put in.

After a lengthy discussion, and it appearing that the provision in the old agreement of the three groups known as "The Grievance Clause" had not as yet worked any hardship or been of any benefit in practice to either party, the representatives of the men consented to the application for the removal of that clause being considered withdrawn from further consideration by this Board.

On the question of the claim of the men to holidays with pay, and to increased wages, and pay for the rate of 8 hours for 7 hours work for Sunday work, the claim of the men was based largely upon the following grounds:

(*a*) That through the introduction and use of one-man cars an additional strain of work was placed on the men;

(*b*) That a reduction in the total number of men employed having taken place a larger volume of work was placed on the remaining men to perform the work required of them;

(*c*) That employees on a monthly basis having been given holidays with pay, it was equitable that employees on an hourly basis should receive holidays with pay in accordance with length of service;

(*d*) That it appearing that the Company having made a large saving in the general cost of operation, a share of that saving should be extended to the employees.

(*e*) That Civic, Provincial and Federal employees are granted holidays with pay, and that industrial concerns are showing a tendency to do likewise.

The Company, on the other hand contended that as against the saving in certain costs of operations and generally that there was:

(1) A tendency developing during the succeeding months of the year 1930 for gross revenue to decline, and that the gross revenue for the first six months of the year 1930 was $128,000 less than for the first six months of 1929;

(2) That to grant all the claims of the men would make a yearly difference of from $450,000 to $500,000;

(3) That the Company already pays an extra five cents an hour for Sunday work;

(4) The operators of one-man cars do now receive an extra 5½ cents per hour above operators of two-man cars, which for the year would amount in extra pay to approximately the sum of $130 per man.

(5) That from the revenue not only the rights of the investor in the Company's securities and the fare paying public, but the necessity of giving a satisfactory service with modern equipment have to be considered, as well as the claims of the employees in respect of wages and improved working conditions.

(6) That while municipally owned street railways tend to allow holidays, yet 94 per cent of the total of hourly paid employees of the street railways in Canada are not allowed holidays with pay;

(7) That the changes in operation, and in particular the introduction and use of one-man cars were in line with the latest development in operating street car service, and were becoming more widely adopted.

(8) That the net revenue now being received was at a considerably smaller rate than was allowed in the finding of the Utility Commissioner for Manitoba, where $735,000 was given as the amount of net revenue to which it was entitled, whereas in 1929 it was less than $445,661.25.

After giving consideration to the arguments on the above contentions, and to the many exhibits filed, and to discussions before the Board by representatives of both parties, the majority of the Board are of the opinion that the wages now being paid are fair and reasonable and that, while the tendencies in normal times and on the longer view are towards better working conditions, a shorter hourly week and holidays with pay, yet present conditions both with the Company and generally do not, in our opinion, warrant such a change as would substantially increase to the Company its cost of operation.

From the evidence presented it appeared that a very small percentage of employees in like service in other similar uitities, who are employed on an hourly basis, are receiving holidays with pay; and although, particularly among municipally owned street railway companies, a disposition was shown to grant holidays with pay to men as a matter of right, and as contributing to their efficiency, yet for

the above-mentioned reasons, and for this year at any rate, we think the Company should not be expected to add the additional expense required to meet the demands of the men of the various units in this respect.

Re Dismissals Application:

The Board begs to report herein that since the date of our report, July 25, 1930, (copy of which is attached hereto) no further progress has been made, the Company persisting in its attitude as set out herein, and the applicants persisting in their claim that their application should be heard.

It is with pleasure that the Board records its appreciation of the efforts made by each party to the disputes to conciliate, and even where marked differences of opinion between them appeared, we found that such respect and consideration for the conflicting views of the opposing party was shown as rendered our work pleasant, and must work in the future as it has worked in the past towards a fair and reasonable relationship existing between the Company and its employees.

The Board has been greatly assisted by the very comprehensive and clear presentation of the matters at issue made by the representatives of each party.

Mr. R. B. Russell, the third member of the Board, joins with the other members generally in the report, with the exception only of the finding of the majority of the Board, as outlined above, on the question of holidays with pay and increase in wages, and his report thereon will follow.

All of which is respectfully submitted.

(Sgd.) W. J. DONOVAN,
Chairman.
(Sgd.) C. E. DAFOE,
Member of Board.
(Sgd.) R. B. RUSSELL,
Member of Board.

Copy of telegram of July 25, 1930

H. H. WARD, Esq.,
Deputy Minister of Labour and Registrar,
Ottawa, Ontario, Canada.

Further reference to your telegram of fourteenth instant the Chairman of the Board with Mr. Russell concurring begs to report that after hearing the representations of Company on the facts of the case and particularly in respect of its claim that it had the right as a matter of discipline to dismiss the employees in question and has the executive right to decide on the sufficiency of the reasons for dismissal of employees generally it was the opinion of the two members above mentioned that the dismissals in question were under the circumstances a matter which could and should pursuant to the application be considered a part of working conditions affecting not only the three individuals mentioned in the application but also of the employees whose wages and working conditions are being considered by the Board under the original references.

In any event we consider the decision of the Minister of Labour and his act in referring the dismissals to the Board are fully authorized by Section seven of the statute and not subject to attack on the technical and merely legal grounds advanced. At previous sitting representatives of Company stated that they would object to any Board being constitued to deal with the dismissals in question and would not name a representative for such a Board or attend unless forced by subpoena. They refuse to consent to Mr. Dafoe continuing as a member of the Board while the question of dismissals is being dealt with and Mr. Dafoe has on that account stated that he will not act.

Under the circumstances we assume it may be considered in respect of that question that there is a vacancy in the Board and that because of the technical objections of the Company it may be considered that it has failed or neglected under sub sec. "b" of sec. nine of the Act to recommend a representative.

They make clear that they have no objection to the personnel of the present Board and we understand they would refuse to recommend a representative or willingly attend the meetings if a new Board were appointed.

The present Board therefore intends to proceed with the hearing but assume that a new member will be appointed to replace Mr. Dafoe in dealing with dismissal cases.

We could proceed by Wednesday or Thursday of next week if convenient to Minister to name a third member by that time.

(Sgd.) W. J. DONOVAN.

Minority Report

In the matter of the "Industrial Disputes Investigation Act," and of a dispute between the Winnipeg Electric Company and its employees, being motormen, conductors and busmen, mechanical and track department employees, members of the Street Railway employees Unit of the One Big Union.

To the Honourable the Minister
of Labour,
Ottawa, Ont.

SIR,—While concurring generally with the report of the majority there are certain matters upon which I differ and, herewith, forward my minority report on the questions of holidays with pay; reduction of hours; and increases in wages.

The majority members of the board when dealing with the employees' requests on the above-mentioned matters grouped them all together and then dealt with them in a general way to which method I could not resort, for the following reasons: The three groups of employees were all asking for holidays with pay according to the length of service with a maximum of twelve days per year after three years' service. The Company's representatives, while agreeing that holidays with pay was a very desirable thing, contended that their

present financial position would not permit the granting of the men's request at this time.

No argument, other than the financial one, was advanced by the Company which, in my opinion, was thoroughly offset by the employees who presented evidence from the Company's own exhibits wherein they showed that since the introduction of the One-Man operated cars, the Company had effected a saving in wages alone, during the three years 1927, 1928, 1929, of $784,068.48.

In fact the Company, itself, produced evidence to show that it would cost the sum of $281,550 per year to restore two-men car operators on all One-Man cars, which the men claimed, and in my opinion proved what the Company had saved in wages, at the expense of the employees through the introduction and extension of the One-Man car system.

Furthermore, the employees presented evidence which showed that the One-Man car system was responsible for the elimination of 333 employees during the period aforementioned while at the same time the gross earnings of the Company during the same period, 1927, 1928, 1929, showed a steady increase; thus proving the contention that the employees now in the service, with 333 men less, were not only doing the work formerly done by Two-Men car operators but were handling from year to year an increased number of passengers as according to the last figures available, 1929 was the second highest passenger rate in the history of the Company.

On top of this the men proved that the nature of their employment has become more hazardous, and they presented evidence showing that the number of pedestrians on the streets has increased and also that the number of automobiles had increased from 10,932 cars in 1920 to 24,505 in 1929, thus making their occupation more nerve-racking and thus proving the necessity for a period of relaxation each year from the strenuous duties which is making old men of them in a very short period of time.

Added to the foregoing, the employees of the Mechanical Department were also able to show how intensified their occupation has become by presenting figures which showed that 190 men in 1930 not only did the work which was done in 1921 by 252 men, but they also did the extra work created as a result of the installation and maintenance of the added devices and mechanical appliances on the One-Man cars.

In view of the admission by the Company that they would have no objection to giving the men holidays with pay provided that the Company's finances would permit, it is only right and proper that a thorough investigation of the Company's finances be made. This, however, was not done; the majority members of the Board having accepted the Company's statement without investigation which makes it necessary for me to disagree with them for the following reasons:—

1st. On the grounds that the men proved and the Company admitted that their wage bill for 1929 was $88,915 less than in 1928, in spite of their gross earnings being increased during the same year by $83,089.

2nd. That the men's arguments are well founded when they show that the Company, in the financial exhibits filed with the Board, admit that out of revenue for 1929 alone they took the sum of $282,505.89 for depreciation, and an examination of the Company's published balance-sheet as at December 31, 1929, shows that the Company had accumulated $5,246,794.39 in the reserve for depreciation on all of its fixed assets, yet they make no deductions from the assets whatever for depreciation, neither do they show where any of the moneys deducted from revenue for depreciation has been used to replace the depreciated property. In view of this I feel that it is only fair to add the amount set aside for depreciation for 1929 to the net revenue which the Company claims to have earned which would bring the surplus earnings for 1929 up to $728,167.14.

This to my mind gives the Company sufficient finance to meet the men's demands for holidays with pay, which I contend the men have proven, and the Company officials and the other two board members in their report admit, is very desirable as a matter of right and as contributing to their efficiency.

There is one other point which the other two members of the Board have apparently overlooked and that is that the Company has just been granted permission to increase its fares by approximately ½ cent per passenger, which will bring them an added revenue even allowing for a smaller number of passengers than carried in previous years of at least $275,000.

This added to the surplus already mentioned is, in my opinion, conclusive proof that the Company is in a financial position to grant the men's request for holidays with pay.

I also find myself in agreement with the men's request for a shorter work-week, and feel that the men of the mechanical department presented a proven case when they showed that their hourly wages in the past had been established on the basis of a forty-

eight hour week, but that their yearly earnings had been considerably reduced from the amount the Company had recognized as necessary by working them short-time and in this way reducing their earning power.

This request of the employees was met with the same argument as the request for holidays with pay; that the finances would not permit, with which argument, I have already stated, I cannot agree and I think that the men are rightly entitled to the shorter hours without any reduction in their weekly wages,

Dealing with the question of increases in wages asked for by the Track Department employees, again I have to disagree with the other two board members when they say, "they are of the opinion that the wages now being paid are fair and reasonable." In my opinion the men prove conclusively that the rates being paid to the Track Department employees are neither fair nor reasonable when one considers that all the men were asking was a minimum wage of 38 cents per hour and a maximum rate, after three years, of 50 cents per hour.

When this request is compared with the rates being paid track labourers on other street railway systems, it is very obvious that their modest demands should have been granted, as the following table shows:—

City	Minimum	Maximum
	Cents per hour	Cents per hour
Halifax	40	47
Ottawa	44	48
Toronto	45	59
Hamilton	49	Flat rate
Regina	45	55
Calgary	57½	Flat rate
Edmonton	55	"
Vancouver	50	59
Victoria	54	Flat rate

The other rates for the different classifications amongst the trackmen, I am convinced, are reasonable and ought to be granted, as the men involved are called upon to furnish considerable skill in their occupation.

I have the honour to be,

Yours respectfully,

(Sgd.) R. B. Russell,

Representing the Employees.

Report of Board Concerning Dismissals

September 6, 1930.

To the Honourable the Minister of Labour,
Ottawa, Canada.

Re Winnipeg Electric Company and certain of its employees who were dismissed

On the 3rd of July, 1930, a Board of Conciliation under the Industrial Disputes Investigation Act R.S.C. 1927 was established to deal with the application of the Motormen, Conductors and Busmen and certain other classes of employees of the Winnipeg Electric Company in respect of certain disputes between those employees and the Company, pertaining to wages and working conditions.

On or about the 12th day of July, 1930, the applications for a Board by Motormen Alfred Crisp, Fred Houlden and James Morrison in connection with their dismissal by the Company was referred by the Honourable the Minister of Labour to the same Board for hearing.

At that time the Board consisted of the Honourable Mr. Justice Donovan, Chairman; C. E. Dafoe and R. B. Russell, members nominated respectively by the Company and the representatives of the men.

The Company having made objection to the jurisdiction of the Board in respect of the hearing of the dismissal applications and to Mr. Dafoe continuing to act as a member, he notified the Board of his inability to continue to so act.

Further representations were later made to the Board by representatives of the Company to the effect that the Industrial Disputes Investigation Act did not authorize such a procedure as referring cases of this class to an established Board because the dismissal cases did not relate to wages and working conditions then being investigated.

The Chairman and Mr. Russell were of the opinion that the claims of the Company to dismiss for cause on grounds of which it claimed to be the sole judge as to the sufficiency of the cause was a matter which affected the working conditions of all employees including the Motormen, Conductors, etc. whose complaints were then being investigated by the Board, and that in any event under the definition of the word "Dismissal" in subsec. (*d*) of sec. (2) of the Statute the question as to jurisdiction appeared to be covered. Under sec. 23 of the Statute the power appeared to be given to the Minister of Labour to make such a reference, and under sec. 7 of the Statute the decision of the Minister is made final.

A report was made by the Chairman of the Board (Mr. Russell concurring) in a telegram to the Registrar of the Department of Labour under date the 25th of July, 1930.

Following the receipt of notification under date of 7th of August, 1930, from the Deputy Minister of Labour that the Minister had appointed Theodore A. Hunt, K.C., as Board member on behalf of the Employer Company in substitution for Mr. C. E. Dafoe, the Board proceeded to deal with the disputes in reference to the dismissals of Alfred Crisp, Fred Houlden and James Morrison.

Representatives of the Company appeared only under protest and maintaining their contention that the question of such dismissals were not within the jurisdiction of the Board. However, during the sittings its representatives gave every assistance in bringing out the facts of each case, and, on the suggestion of both parties to the dispute, an inspection was made of the speed control mechanism of a car while in operation.

The Company was represented at the Board sittings by C. H. Dahl, Esq., Vice-President in charge of operation; Laurence Palk, Esq., Vice-President in charge of Executive matters; R. R. Knox, Esq., Assistant General Manager; R. D. Guy, Esq., K.C., General Counsel for the Company; D. J. Graham, Esq., Manager of Railway Utility; Frank E. Seeney, Esq., Superintendent of Rolling Stock, and several other representatives.

The men were represented by Alex. Hume, Esq., General Secretary, and Edward Armstrong, Esq., President of the One Big Union, and John Duff, Esq., and T. McClure, Executive Board members, and several other representatives.

Attached hereto are separate reports of the Board on each of the three cases heard.

In the case of Alfred Crisp the hearing was short, he having candidly and fairly admitted the facts against himself but as his fault was only a momentary neglect, on a comparatively clear street, the question of the severity of his punishment by dismissal and of his previous record occasioned a lengthly discussion.

In the Houlden case it was necessary to consider not only the question of negligence of both the Motorman and of the automobile driver whose car came into collision with the street car but more particularly from the standpoint of the Company, was it necessary to peruse some of the evidence taken at the trial in the action brought by the automobile driver against the Company for damages because of the collision, and to consider the capacity of the motorman to act not only in an emergency but to competently report on it afterwards so that the Company could fairly consider if any liability attached to it in case a claim were made against it by the other party to the collision.

In the case of James Morrison the main issue was centered around the question as to whether the Reverse of the car being operated by him as motorman was in good working order and as to whether he was travelling at an excessive rate of speed, considering that the air compressor on his car was not in working order.

As the question of the degree of credibility to be attached to the evidence of the applicant and of the Conductor on his car, on one part; and that of several witnesses on the other part was involved, consideration of this case was more difficult.

The separate report enclosed herewith sets out the findings of the Board.

Beginning with a sitting of the Board as it was then constituted on the 11th of August, 1930, sittings were held at regular intervals to suit the convenience of the parties throughout the month of August and during several sittings in the early days of September the Board was hopeful that a mutually satisfactory arrangement might be made by the parties.

We are pleased to record our appreciation of the readiness shown by the representatives of both parties to fairly put before the Board all the facts in respect of disputes under consideration and of the courtesy exhibited throughout by each representative for the other.

All of which is respectfully submitted.

(Sgd.) W. J. DONOVAN,
Chairman.

(Sgd.) R. B. RUSSELL,
Member of Board.

(Sgd.) THEO. A. HUNT,
Member of Board,
from 12th August, 1930.

IN RE *the dismissal of a motorman, James Morrison by the Winnipeg Electric Company.*

The grounds for dismissal given by the company in its reply to the Registrar of the Department of Labour under date of July 4, 1930, were that Mr. Morrison was travelling at too great a rate of speed considering the condition of his car, and that he applied the reverse too late.

His explanation of the accident was, that when crossing the street, distant one city block away from the place of accident, he shut off the power and when from three and one-half to four car lengths from the intersection at Donald Street, applied the reverse and only realized when there was no slowing up of the car, after going the usual distance, that it was not becoming effective and he then applied the power to make the mechanism work and also waved his hand and sounded his gong to warn the motorman of the car which was about to go across his track from Donald Street.

The driver of the car from Donald Street, however, did not see the Morrison car, although he had to turn to the east and to an increasing degree as he went forward on his way, had to face the oncoming Morrison car.

It does not appear to be open to question but that the driver of the Donald Street car could have avoided the accident with ordinary care and watchfulness as he was travelling according to his own evidence at some four or five miles an hour and there was nothing to obstruct his vision. A speed of eight to ten miles an hour for the Morrison car on Broadway did not, according to the evidence, appear to be at an excessive rate, at least up to Smith Street, provided the reverse could be fully relied upon and, of course, also provided that the motorman applied it in time.

It must, we think, be admitted that the motorman realized after travelling some three or four car lengths after passing Smith Street that he was in a serious situation unless he could bring his car to a stop. There was no suggestion but that Morrison was at his position in the vestibule and was making an effort to stop.

The sole question appears to be centred around the enquiry as to whether he relied for too long a period on his reverse and should he not have sooner taken some other means to bring his car to a stop.

If the statements of Morrison and of his conductor are to be accepted his default in attempting to bring the car to a stop arose only from either (*a*) an error of judgment or (*b*) from a failure of the reverse to act.

There was some evidence given before the Board that a reverse will not act the same twice and it appears that the action of the hand in moving the reverse must not be too fast.

We have come to the conclusion after hearing the statements and estimates of the various witnesses as to use of the car in question that the statements of Morrison and of his conductor as to his efforts to bring his car to a stop should not be rejected as untrue.

Did he, however, defer for too long a time his action in taking other steps than merely relying on his reverse? If it be true that the reverse did on that occasion fail to respond as he says it did, then the fault would appear to lie altogether with the mechanism of the car and not with the operator.

In view of the lack of sure response from the use of the reverse on every occasion we think that Morrison should be given the benefit of any doubt, particularly as it must have been evident to him that so soon as he realized after travelling three and one-half or four car lengths without the reverse bringing the car to a stop, that he was heading for a very serious situation.

We are hopeful that some new aspects of the situation, more favourable to Morrison, have been revealed to the company officers during this lengthy hearing and that a reconsideration might lead to re-employment of the applicant.

The representatives of the men freely admitted the fair and considerate treatment they have invariably received from the officials of the company who have to deal with their schedules and working conditions and it is our pleasure to record the fact that throughout the discussion of the many contentious points a spirit of fairness and reasonableness prevailed.

There appears to be no dispute between the parties as to the right of the company to dismiss for infraction of the rules going to the operation of its utility or for inexcusable failure to perform a duty by an employee. In this case, however, as it appears to us, we think a more critical consideration of the evidence against Morrison and a special reconsideration of the situation with which he was confronted from the time when he realized that his reverse would not act must lead to a finding more favourable to him.

We would, therefore, recommend to the representatives of the men and to the applicant that they apply to the company for a reconsideration of the decision in the case.

(1) *In re dismissal of Alfred Crisp, a motorman in the employ of the Winnipeg Electric Company.*

The dismissal of Alfred Crisp arose out of the fact that while operating a motor bus he collided with a milk wagon, which was at the time standing on his right hand side of the roadway.

The facts in this case are not in dispute, and Mr. Crisp admitted that he was entirely to blame for the accident, but it was contended on his behalf that the punishment of dismissal was too severe, having regard to the nature and consequence of the collision. Without apparent reason, in a clear, open street, with no traffic to interfere, and with the milk wagon in full view, he let his car run into the rear of the milk wagon and knocked off two wheels and injured the horse.

Mr. Crisp's only explanation was that his engine had started missing and that while leaning over in trying to work the choke he did not keep control of his steering wheel, and the front right wheel of his car caught one of the wheels of the milk wagon.

Full investigation was made by the company's officials and by a committee of the men's union, and an appeal was taken from the decision to dismiss Mr. Crisp to an appeal committee composed of the company's officials, and these officials decided that there were no extenuating circumstances, and confirmed Mr. Crisp's dismissal.

The chief consideration for the Board in this case appears to centre about the question: did the facts justify the company's officials in dismissing Mr. Crisp?

Mr. Crisp admits that the company was justified in visiting some sort of punishment upon him for his momentary neglect. His statement was characterized by the utmost candour and frankness, and one could not help but be impressed with both the fairness of Mr. Crisp himself and of the committee which supported his application.

Had the milk wagon been a conveyance loaded with passengers, instead of milk, the collision would probably have had very serious consequences, and can the company, in its obligations to the public, afford to retain men in its service who are even momentarily careless on a public highway; or it is asking too much of human nature to be constantly on guard against possible accidents in the operation of public conveyances? It does seem a very great hardship for a man who has been in the service so long as Mr. Crisp has to be deprived of his normal occupation and to be obliged to find a new source of livelihood; but in view of the undisputed statements made by the representatives appearing here for the company that it has found from experience that to maintain proper discipline, and a high degree of care on the part of the motormen, it is necessary that in cases of inexcusable failure to perform a duty, or gross neglect, that punishment by dismissal must follow.

In the light of that evidence it does not seem that the action of the company can be criticized, or the opinion be expressed that the punishment was too severe.

Winnipeg, September 3, 1930.

In re dismissal of Fred. Houlden, a motorman in the employ of the Winnipeg Electric Company.

The application for a Board of Conciliation in connection with this dismissal alleged that he had been dismissed because he, in an Examination for Discovery, held some fifteen months after a collision between a car operated by him and an automobile driven by one N. A. Cain, "could not give a clear explanation of how the accident happened, and because of this they did not consider him a capable employee." The reply of the company, under date of July 4, 1930, to the Registrar of the Department of Labour, referred, in part, to this case as follows:—

"His dismissal, however, arises not out of any fault that we found with his operation, but rather because of his utter incompetency to explain intelligently how an accident happens after it has occurred. This was brought home very vividly when it was necessary to call him as a witness in a recent damage suit. In an examination for discovery he contradicted himself throughout the questioning and no one could tell what had happened from his version of the story.

"The company's contention is that it cannot afford to keep in its service employees who cannot give a reasonable intelligent description of how an accident happens because every one of its trainmen may at some time have an accident and it is essential that they be able to make intelligent explanations. In other words, this is just as necessary a qualification for a trainman as ability to operate a car, sell tickets, etc."

The position of the company was more definitely stated in a communication to the Board which stated:—

"Motorman Holden (Houlden) was dismissed by the company because having given several statements to the company in regard to an accident which occurred at the intersection of Wall Street and Sargent Avenue on the 24th of January, 1929, which statements were inconsistent, incoherent and contradictory, and not in accordance with the facts as established by the company's own investigation and by other witnesses, and though the company endeavoured to dispose of the inconsistencies and contradictions in his statements by discussion of the case in detail with him, and in other ways, he could not then make a statement consistent with the facts as established but demonstrated his incapacity to describe what happened and the unreliability of his reports. Street car motormen are met with situations daily where prompt action is necessary. What transpired in this case showed that Motorman Holden (Houlden) was not capable of picturing in his mind what happened in front of his car and describing the facts subsequently.

"The alternative to a finding of such incapacity would be that his reports were improperly made, wilfully and deliberately.

"After his discharge for the above cause it was found that he had not given to the company the names of two witnesses to the accident, one Gregory and one Lloyd, of whom he became aware and whose names he should have reported."

It appears that Mr. Houlden, shortly after the accident occurred, made the usual verbal report to the company, and within a few days thereafter, Cain, having notified the company of a claim for damages, a report in writing was made by an official of the company of his verbal statements, and wherein he was alleged to have given his version of the circumstances and events leading up to the collision.

Some time thereafter Cain started his action against the company for damages and it was obliged to produce Mr. Houlden for examination for discovery.

Counsel for the company considered that the statements made by Houlden on this examination for discovery were at variance with some of the facts which were clearly otherwise established, and were inconsistent both with some of his previous statements and with some of his answers in respect of other circumstances of the collision, and decided that rather than produce him as a witness in its defence that it should not produce Mr. Houlden as a witness, and would have to rely on its defence, at the trial of the action brought by Cain, solely on the contention that the plaintiff was also negligent in operating his automobile.

In the hearing before the Board, in addition to the aforementioned statements, Mr. Houlden gave evidence, and with the approval of both parties to the dispute, all the witnesses to the collision who were still available appeared and gave evidence.

The case was also discussed at length by representatives of both parties and, on the position of the company in respect of the cause of dismissal being further defined, we did not understand the representatives of the men to further contend that the company had not established its contention that it was justified in considering that Mr. Houlden had made statements in connection with the collision which were "inconsistent, incoherent and contradictory, and not in accord with facts as otherwise established by investigation."

It was shown that Mr. Houlden had failed to turn in to the company in his report the names of two witnesses of the accident who were known to him.

After careful consideration, the Board is unanimously of the opinion that the company, in fairness to Mr. Houlden, took every reasonable step not only to assist him in describing the events, but in hearing an appeal from his dismissal gave consideration to the main contentions urged on his behalf at this hearing.

We are, therefore, of the opinion that the company was justified in dismissing Mr. Houlden for the reasons given.

Winnipeg, September 3, 1930.

CANADIAN RAILWAY BOARD OF ADJUSTMENT No. 1

Summary of Recent Decisions

FOUR new decisions were recently given by the Canadian Railway Board of Adjustment No. 1. In one of these cases (No. 252) the decision supplemented one given earlier in the year.

The Board was established by a voluntary agreement concluded in 1918 between the various railway companies and certain of the railway organizations, its original purpose being to secure uninterrupted service on the railways during the continuance of the war. The Board consists of six representatives of labour, one for each of the following railway brotherhoods: the Brotherhood of Locomotive Engineers; the Brotherhood of Locomotive Firemen and Enginemen; the Order of Railway Conductors; the Brotherhood of Railway Trainmen; the Order of Telegraphers; and the Brotherhood of Maintenance of Way Employees and Railway Shop Labourers. Earlier decisions were outlined in the LABOUR GAZETTE, March, 1930, page 269, and in previous issues. The third report of the proceedings of the Board, covering the decisions rendered from October 1, 1923, to September 30, 1927, was issued as a supplement to the issue of November, 1927.

Case No. 344.—Canadian National Railways (Western Region and Brotherhood of Locomotive Engineers and Brotherhood of Locomotive Firemen and Enginemen.

An engineer and two firemen claimed payment for "deadheading" (that is, travelling to point where duties began), under Clause C of

Article 2 of the Engineer's and Firemen's schedule which reads as follows:—

"Deadheading on Company's orders will be paid actual miles at minimum passenger rate, actual miles or hours to count figured from time ordered for to time of arrival, computed as per Article 1 and 2 (minimum day except in case of continuous service).

It was necessary for the men to "deadhead" to the distant terminal in order to take the first trip of a new summer run. The company contended that under such circumstances it was not the custom to pay the men for deadheading, and that men going to positions on a new run should go on their own time to make the initial trip.

When the case was first heard the Board found that the evidence regarding the practice in such cases, where seniority rights were being exercised, was of a contradictory nature, and asked for further information as to the custom under the rule. At a further hearing the employees submitted that it had been definitely established that, under similar circumstances in the year 1927, when the new run in question was inaugurated, the crews were required to "deadhead" to the distant terminal to bring out the new train, and that trip tickets covering deadheading were handed in and paid. The company admitted that payment had been made without question in 1927, but maintained that where new passenger runs are created and bulletined, the men assigning themselves to such runs should place themselves in a position to fill them whether at the home or distant terminal without additional expense to the company, in the same manner as a senior engineer having the right to do so would displace a junior engineer, even although he had to deadhead in order to do so. In such a case the understanding was that men deadhead on their own time, or where an engineer on one division might bid in a run on another territory, he would go and take the run on his own time, no deadheading being allowed.

The Board sustained the contention of the employees.

Case No. 352.—Northern Alberta Railways and Order of Railroad Telegraphers.

This case concerned a lineman who had been dismissed, and whose reinstatement had been ordered by the Board in an earlier decision (LABOUR GAZETTE, March, 1930, page 269). A question subsequently arose as to position to which the lineman was entitled on his reinstatement. The employees contended that in recommending reinstatement the Board's intention was that the time lost should be considered as sufficient discipline, and that he should exercise his right of option for any position to which his seniority entitled him. The company claimed that such right, if granted, would give the employee privileges beyond what he would have enjoyed while employed as a lineman prior to his dismissal.

On the matter being brought before the Board, the chairman pointed out that the intention of the earlier decision was that the employee should exercise the right to return to his former position. The Board therefore decided as follows:—

"The clear intent of the Board in its original decision was that Lineman G—— should on February 15, 1930, be given the position held by any junior lineman that he desired. As this was not done at the time, the Board now supplements its decision to the extent that the lineman shall be reimbursed for such additional expense as he may have been subjected to since March 1, 1930, on account of being compelled to remain at an outlying point and away from his home, and further, that the original decision be put into effect at once."

Case No. 359.—Canadian National Railways (Western Region) and Brotherhood of Railroad Trainmen.

Three yardmen were dismissed for violation of Rule G, on a charge of having been intoxicated while on duty. The employees denied that they had been in such condition, but the Company claimed that it had been proved after fair and impartial investigation, and that in consequence, a serious delay had been caused to a freight train.

The Board did not sustain the contention of the employees.

Case No. 360.—Canadian National Railways (Western Region), and Brotherhood of Locomotive Engineers.

An engineer in charge of an "extra" engine caused a delay in traffic in consequence of his neglect to get into touch with the despatcher before moving his train. Each party having presented its case, the Board made the following general statement:—

"The Board fully appreciates the necessity of Operating Rules being strictly enforced, and the dual responsibility which rests on the conductor and engineer. The technicalities involved in this case, while not being set out herein, were fully reviewed, and the other discipline administered in connection with the case was considered. It is desirable to point out to all concerned that the Operating Rules in effect at the time have since been changed."

The decision of the Board was that there was a violation of the rules, but under all the circumstances, and considering that the conductor had arranged to advance the train under flag protection, the flagman having already gone forward and the operator not being on duty, the Board felt that the Engineer acted in good faith and that his record should be cleared.

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1930

THE number of strikes and lockouts in existence in Canada during August, 1930, was three, as compared with six during the preceding month. The time loss for the month was appreciably less than that occurring during July, as was the number of workers involved. As compared with August, 1929, the figures for August, 1930, show that only three strikes occurred during the month as compared with ten during the same month last year, the number of workers involved and the time loss showing a similar abrupt decline.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Aug., 1930	3	65	484
*July, 1930	6	240	2,600
Aug., 1929	10	957	3,217

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

Two disputes, involving twenty-five workers, were carried over from July and one dispute commenced during August. All three of these disputes terminated during the month, one being in favour of the workers and the other two in favour of the employers. At the end of August, therefore, there were no disputes recorded as strikes or lockouts.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to five such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; plumbers, Kingston, Ont., April 2, 1928, several employers; photo engravers, Toronto, Ont., January 7, 1929, one employer; coal miners, Mercoal, Alta., June 14, 1929, one employer; and motion picture projectionists, Vancouver, B.C., June 23, 1930, one employer, this last dispute being added this month.

In connection with the dispute involving coal miners at Mercoal during the last few days of July a large number of members

STRIKES AND LOCKOUTS IN CANADA DURING AUGUST, 1930

Industry, occupation and locality	Number of workers involved	Time loss in working days	Remarks
(a) Strikes and Lockouts in Progress prior to August, 1930.			
MANUFACTURING—			
Clothing (including knitted goods)—			
Men's clothing factory workers			
Montreal, P.Q.	21	84	Commenced June 15, 1930; against changes in working condition; terminated Aug. 6, 1930; in favour of workers.
SERVICE—			
Recreational—			
Motion picture projectionists,			
Vancouver, B.C.	4	40	Alleged lockout, commenced June 23, 1930; against reduction in wages; working conditions no longer affected by Aug. 31, 1930; in favour of employer.
(b) Strikes and Lockouts Commencing during August, 1930.			
SERVICE—			
Public Administration—			
Painters, Saint John, N.B.	40	360	Commenced Aug. 18, 1930; for increase in wages and shorter hours; terminated August 28, 1930; in favour of employer.

of the Mine Workers' Union of Canada, reported to have come from neighbouring mines, estimated at about 150, had prevented the mine from operating with the sixty or eighty members of the United Mine Workers' Union of America, which had renewed its agreement with the operator involved in the dispute. A large body of provincial police arriving on the scene, four of the leaders were charged with assault and arrested. Most of the pickets returned to the neighbouring mines and the mine resumed operations.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

MEN'S CLOTHING FACTORY WORKERS, MONTREAL, P.Q.—The strike of men's clothing factory workers in one establishment in Montreal, commencing June 15, 1930, against changes in working conditions from those provided for in the union agreement, was terminated on August 5, 1930. Under the terms of the settlement the employer agreed to employ only two sub-contractors instead of three, the point in dispute, and to reinstate all the strikers without other changes in conditions.

MOTION PICTURE PROJECTIONISTS, VANCOUVER, B.C.—Motion picture projectionists in two theatres in Vancouver operating under the same management allege they were locked out on June 23, 1930, when, following a proposed reduction in wages, they were notified their services were no longer required. The employer replaced them with members of another union, and by the end of August they themselves had secured work elsewhere, so that the dispute is no longer considered as affecting working conditions and has, therefore, been transferred to the list of strikes and lockouts where working conditions are no longer affected but which the unions concerned have not yet declared terminated.

PAINTERS, SAINT JOHN, N.B.—Workers employed to paint a highway bridge near Saint John, N.B., went on strike on August 16, 1930, demanding a rate of 90 cents per hour and the eight-hour day instead of $4 for the nine-hour day they were then working. The employer involved removed the painting outfit and plant from the job to another site. On August 28, 1930, work was resumed on the bridge, the strikers going back to work at the employer's standard rate of $4 per nine-hour day.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the LABOUR GAZETTE from month to month, bringing down to date that given in the issue for February, 1930, in the review of Strikes and Lockouts in Canada and Other Countries, 1929. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain

During July, the number of disputes which began was 30, and 22 were still in progress from the previous month. The number of workpeople involved in the 52 disputes which were in progress during the month was 11,000 and the time loss 89,000 working days. Of the 30 disputes beginning in July, 4 arose out of demands for increased wages, 6 out of proposed reductions in wages, 7 on other wages questions, 2 on questions as to working hours, 4 on questions respecting the employment of particular classes or persons, 4 on other questions of working arrangements and 3 on questions of trade union principle. Settlements were reached in 40 disputes, of which 6 were in favour of workpeople, 17 in favour of employers and 17 ended in compromises; in the case of 2 other disputes, work was resumed pending negotiations.

A strike involving 1,250 upholsterers employed by wholesale manufacturing firms at London began June 14, for increases in wages and other concessions. No settlement had been reported at the end of June.

Austria

The number of disputes occurring in the year 1929 was 225 directly affecting 30,416 workers and involving a time loss of 388,216 working days. Revised figures for the year 1928 show the number of disputes occurring as 266, involving 38,290 workers with a time loss of 658,024 working days. Of the 225 disputes in 1929, 148 were over wages questions. The results of the strikes show that workers were completely successful in 18·4 per cent of the strikes, partially successful in 54·2 per cent and unsuccessful in 27·4 per cent.

Czechoslovakia

The number of disputes occurring in 1929 was 211, directly affecting 59,460 workers and involving a time loss of 695,328 working days

Revised figures for 1928 give the number of disputes as 282, involving 99,430 workers with a time loss of 1,698,684 working days. The majority of the disputes were over wages questions. Of the 211 disputes, 21 ended in favour of workers, 83 in compromises and 74 in favour of employers; in 33 cases the result was unknown.

Finland

The number of disputes beginning in 1929 was 26, directly involving 2,443 workers with a time loss of 74,887 working days. The results of the disputes show that 3 ended in favour of workers, 11 in compromises and 12 in favour of employers.

France

The strike involving between 100,000 and 150,000 textile workers and iron and steel workers in Northern France, which was reported in the August issue of the Labour Gazette, continued during August. Through the mediation of the Minister of Labour, however, a settlement was reached on August 21, in so far as the textile workers of Lille were concerned. By this settlement the employers agreed to consider what increase in wages will be possible when the quarterly cost of living index number is published in October, if the Minister of Labour so requests them. The textile workers of the Roubaix-Tourcoing district were still on strike at the end of August. In this district, in addition to the demand for an increase in wages, the strikers also asked for the abolition of the yearly bonus for regular attendance at work. It is reported that several thousand strikers in various industries at Rouen were successful in securing increases in wages amounting to six per cent.

Germany

The number of disputes terminating in the year 1928, was 763, involving 8,082 establishments and 723,415 workers with a time loss of 19,481,258 working days. Corresponding figures for 1927 were 871 disputes, involving 10,480 establishments and 493,680 workers with a time loss of 5,936,006 working days. In 1926, there were 383 disputes involving 2,949 establishments and 99,227 workers with a time loss of 1,271,884 working days.

Hungary

The number of disputes occurring in 1929 was 63, involving 15,065 workers and a time loss of 149,204 working days, as compared with 31 disputes in 1928, involving 10,289 workers and a time loss of 131,174 working days.

British India

Statistics for the year 1929 give the number of disputes in the year as 141, involving 532,016 workpeople with a time loss of 12,165,691 working days. Of this total time loss, 9,632,192 working days were lost in two general strikes which occurred in the Bombay textile mills and the Bengal jute mills. Of the 141 disputes, 54 were disputes as to pay, 2 over bonus, 55 over personnel, 3 over leave and hours and 27 over other causes. Settlements were reached in 138 disputes, of which 31 were entirely in favour of workers, 27 partially in favour of workers and 80 in favour of employers.

Sweden

A strike of 4,500 workers in the paper industry lasted from April to June and was over negotiations for a new national agreement. Through government conciliation, an agreement was reached providing for slight increases in wage.

Switzerland

During 1929, the number of disputes which terminated was 39, involving 4,661 workers and causing a time loss of 99,608 working days for the year. Nearly half of the total time loss occurred in the building industry.

United States

The number of disputes beginning in June was 42 and 36 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 7,197, and the time loss for June 153,644 working days.

Two strikes, one involving 3,700 workers in the children's clothing manufacturing industry and the other 1,200 workers in the raincoat manufacturing industry in New York City began on August 26. Both groups of strikers are members of the International Ladies' Garment Workers Union. The children's clothing group went on strike to secure union wages and conditions and the raincoat workers to renew their former agreement with the employers who wished to reduce wages. The strike of raincoat workers was settled on September 2 when the strikers secured their demands. No settlement was reported of the children's clothing strike at the end of August.

Four strikes were reported of anthracite coal miners in Pennsylvania in June. In all, about 7,000 coal miners were involved. All four strikes concerned grievances as to arrangement of work or union questions and were settled by the beginning of July, the strikers being successful in two cases.

OLD AGE PENSIONS IN CANADA

Statistical Summary of Expenditures during Second Quarter of 1930 and Since Inception of the System

THE accompanying table gives particulars of the expenditures under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) and the various provincial concurrent Acts, during the second three months of 1930, and since these Acts became severally effective. The text of the Old Age Pensions Act was given in the LABOUR GAZETTE, April, 1927, page 375. It makes provision for the establishment of a Dominion Provincial pension system to be effective in such provinces as have enacted special legislation for this purpose. These provinces are British Columbia, Alberta, Saskatchewan, Manitoba, and Ontario. The New Brunswick Legislature passed an Old Age Pensions Act at its session this year to become effective on its proclamation by the Lieutenant Governor in Council. The final report of the Nova Scotia Commission on Old Age Pensions was outlined in the LABOUR GAZETTE, May, 1930, and the question of participating in the system is still under consideration in that province.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as $365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds $125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments. The Department of Labour of Canada pays quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months.

FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT JUNE 30, 1930

	Alberta	British Columbia	Manitoba	Ontario	Saskatchewan	North West Territories	Totals
	Act effective Aug. 1, 1929	Act effective Sept. 1, 1927	Act effective Sept. 1, 1928	Act effective Nov. 1, 1929	Act effective May 1, 1928	Order in Council effective March 1, 1929	
Total number of pensioners as at June 30, 1930	2,341	4,792	5,283	30,268	4,603	4	47,291
Total amount of pensions paid during first quarter of fiscal year 1930-31 (Period April 1-June 30, 1930)	$152,475 16	$279,320 12	$321,263 00	$1,735,019 52	$274,992 46	$260 51	$2,763,330 77
Dominion Government's share of expenditure	76,237 58	139,660 06	160,631 50	867,509 76	137,496 23	260 51	1,381,795 64
Total amount of pensions paid since inception of the Old Age Pensions Act to June 30, 1930	419,895 20	2,328,994 64	1,970,558 67	3,990,707 84	1,594,935 29	818 25	10,305,909 89
Dominion Government's share of expenditure	209,947 59	1,164,478 57	985,279 35	1,995,353 92	797,467 64	818 25	5,153,345 32

LABOUR LEGISLATION IN PRINCE EDWARD ISLAND IN 1930

THE Prince Edward Island Legislature, which was in session from March 11 to April 10, 1930, enacted two laws containing sections of labour interest, the Highway Traffic Act and the Education and Public Health Act.

The Highway Traffic Act, which replaces the Motor Vehicle Act of 1922, provides for the issuing of chauffeurs' licences by the Provincial Secretary's Department. Applicants must be at least 18 years of age. A chauffeur must carry his licence and show it when required to do so by a constable, peace officer, or other authorized representative of the Provincial Secretary. He must also, while driving a motor vehicle, display the badge issued with the licence. Use of a badge or licence belonging to another person or a fictitious, suspended or cancelled badge or licence, is forbidden. The licence of any person convicted of driving while under the influence of liquor or narcotics is suspended for a maximum period of six months for a first offence, twelve months for a second offence, and is cancelled for a third offence. Penalties are provided for breaches of the law. The council of a city or town may by by-law make reasonable regulations for the control of automobile licences, and existing by-laws are continued in force.

The Education and Public Health Act, which comes into force on proclamation, provides for the appointment of a Minister of Education and Public Health whose duties are to be prescribed by Order in Council.

Alberta Coal Mines Regulation Act

The following notice was published in the *Alberta Gazette*, July 31, 1930:—

Notice is hereby given that, by order of the Minister, dated the 5th July, 1930, and made pursuant to Section 15 of The Coal Mines Regulation Act, all small mines, as defined by The Coal Mines Regulation Act, which are not now equipped with the weighing facilities which are necessary to enable persons employed thereat, and paid according to the amount of mineral gotten, to be paid according to the weight of mineral gotten, be exempted from the provisions of Section 13 of the aforesaid Act, such exemption to be effective as from the 1st day of July, 1930, and to remain in force until further order.

The provisions of the new Coal Mines Regulation Act (Statutes of Alberta, 1930, chapter 24) were outlined in the Labour Gazette, July, 1930, page 759. A "small mine" as defined in the Act, means "a mine in which not more than 30 men are employed below ground in the space of a day." Section 13, mentioned in the notice above, is as follows:—

13. When the amount of wages paid to any of the persons employed in a mine depends on the amount of mineral gotten by them, such persons shall be paid according to the weight or admeasurement of the mineral gotten by them, and such mineral shall be truly weighed accordingly at a place as near the mine entrance as reasonably possible, or measured at the working face:

Provided that payment of wages shall be made according to the amount of the mineral gotten, ascertained by weighing at all mines newly opened on or after the first day of March, 1930, and at all mines at which at the time of the pasing of this Act wages are paid according to the amount of mineral gotten, ascertained by weight.

Montreal Workshops for the Blind

The Montreal Workshops for the Blind were founded in 1908, through the efforts of Mr. Philip E. Layton, who is now president of the Canadian Federation of the Blind. An account of the workshops was given in the *Winnipeg Weekly News*, August 22, in Article 3 of a series of articles dealing with problems of the blind in Canada. To-day, it is stated, the institution is reputed to have assets of over half a million dollars, and it is regarded as among the best institutions for the blind on the continent.

The Montreal workshop employs about forty men and women. Single men receive $15 a week, and married men $20. All its finished goods are marketed by blind salesmen also on a good salary. The employees are paid for fifty-two weeks in the year sick or well. The committee of management consists of three persons, of whom one is a blind man elected by the blind workers in the factory. They elect a shop committee which negotiates directly with the management committee. The blind workers make brooms, rugs, mops, brushes, and other similar articles. In 1929 they manufactured about $67,000 worth of products. Last year donations of about $34,000 were received by the institution, which also supports a school for blind children. After twenty-two years of operation the school is free of debt, the last balance sheet showing a credit balance of about two thousand dollars.

LABOUR AND INDUSTRY IN BRITISH COLUMBIA IN 1929

THE twelfth annual report of the Department of Labour of British Columbia reviews its administrative activities during the calendar year, 1929. Established under the Department of Labour Act of 1917, the Department has authority to require the trade unions, industrial societies and other organizations to supply information as to their rules and practices; to require employers to furnish reports as to their employees in respect to wages, hours of work, etc.; and to obtain from any available source information as to the cost of living, the relations of prices to labour and industrial conditions in the province. Under departmental administration are the employment offices and the Factories Act. The Deputy Minister of Labour is *ex-officio* chairman of the Board of Adjustment under the Hours of Work Act, 1923, which provides for an eight-hour working day in the industries of the province, with the exception of those expressly exempted by the Board. He is also chairman of the Male Minimum Wage Board, administering The Male Minimum Wage Act, and of the Minimum Wage Board (for female employees) which administers the Minimum Wage Act.

Industrial Situation.—In a prefatory review, the deputy minister outlines the relation of agriculture to industry as follows:—

"The prairie wheat crop was considerably under the total expected, and because of the prevailing prices very little movement of wheat took place. This resulted in a reduction of train crews, which had its effect upon those employed in the railway repair shops. This condition spread to a certain extent to the industries dependent upon the prairie markets, the purchasing power due to the conditions stated being greatly curtailed. To follow this still further, many of the sawmills found that requirements of prairie lumber dealers would be considerably reduced. There were also decreased requirements of the railway companies for car-decking and other materials for the repair of rolling stock, only minimum repairs being necessary. Nevertheless, with adverse conditions prevailing during the latter months of the year, there was an increase in the total pay-roll for 1929."

Payroll and Wages.—The chapter on Statistics of Trades and Industries indicates that the pay-roll of the Province for 1929 reached the record total of $145,120,326 as compared with $136,784,484 for 1928. The total for 1929 was computed from returns from 5,065 firms which replied to the official questionnaire. In 1928, replies were received from 4,846 firms. As the pay-roll of $145,120,326 was based solely on employers who replied to the questionnaire, it is obvious that this amount did not represent the gross total from all sources. Accordingly, a conservative estimate of other branches of industry not covered by the questionnaire, together with amounts received too late to be classified, places the total pay-roll of all industries at $192,092,249 in 1929, as compared with $183,097,782 for 1928.

The total estimated pay-roll for 1929 is divided by districts as follows: Greater Vancouver, $68,730,605; Vancouver Island, $39,571,007; rest of mainland, $83,790,637.

Analysing the statistics, the report makes the following observation in regard to the various classes of wage-earners:

"The amount paid to actual wage-earners—that is, those not engaged in managerial or office position—totalled $117,344,548.72, an increase of $6,016,024.37 over 1928. Officers, superintendents, and managers received $13,859,767.14, an increase of $1,140,646.49; while the sum paid to clerical staff and salesmen increased by $1,179,170.94 to $13,916,010.12. The percentage figures given below show a decrease covering wage-earners, and it is reasonable to suppose that had business conditions been maintained during the last two months, these figures would have been different, as there is no doubt that the employees engaged as superintendents, managers, salesmen, and in the office occupations were carried on the pay-roll, and that the workers were the class who had either their hours reduced or temporarily laid off during the dull season."

The proportionate payment for 1929 under the headings of officers, superintendents, and managers is 9·48 per cent.; clerks, stenographers, and salesmen, 9·53 per cent.; and wage-earners, 80·99 per cent.

Comparing the 1929 pay-rolls of the 25 wage groups with those of the previous year, the report showed that 21 have increased and 4 have decreased the annual amount paid in wages and salaries. Among groups registering increases, metal-mining assumes the lead with a pay-roll larger by $2,232,000 than that of 1928. Miscellaneous metal trades was second with an increase of $1,200,000. Included in this group are garages, which alone showed an advance of over $500,000. Contracting and builders' materials groups increased by $1,000,000 and $234,000 respectively. Another decided increase was that of $827,000 in the printing and publishing group. Other increases were as follows: Public utilities, $720,-

000; food products, $500,000; smelting, $498,000; coast shipping, $543,000; oil refining, $353,000; pulp and paper, $330,000; laundry industry, $216,000; manufacturing wood, $421,000; breweries, $194,000; shipbuilding, $110,000.

The greatest pay-roll decrease was in coal mining with a loss of $930,000. Commenting on this set-back, the report states that "the immediate outlook is not very encouraging, but the employment situation in this industry could be remedied to some extent if the citizens of the Province were to purchase local coal." Second to the coal mining industry was lumbering, with a decrease of $320,000. Other decreases were cigar and tobacco manufacturing with $23,000, and jewellery manufacturing with $11,000.

The report indicates the number of firms having a pay-roll of over $100,000 per annum. In 1921 there were 118 such firms, while in 1929 this total had increased to the record number of 262, being 8 more than in 1928. Seventeen of these firms had an annual pay-roll of over $1,000,000, and of these four were between $2,000,000 and $3,000,000, and one over $5,000,000. Of the 262 firms with an annual pay-roll of over $100,000 the lumbering industry leads with 105, three less than in 1928, while the food products industry is second with 21 firms, and metal mining third with 17 firms.

Weekly Wage Rates.—The average industrial wage, covering a full week's work for all adult male employees, again advanced over the preceding year from $28.96 in 1928 to $29.20—the highest since the peak year of 1920 when it stood at $31.51 per week. This average is computed from figures supplied by each firm for the week of employment of the greatest number.

The average full week's wages of adult males in each industry for the years 1923, 1928 and 1929 are given in the accompanying table.

The tabular summaries indicate that there has been a steady increase in the number earning $25 per week and upward since 1925. In that year the percentage of employees paid a weekly wage of $25 and more was 54·07; in 1926 it was 54·46; in 1927, 56·41; in 1928, 58·96; and in 1929, 59·82. A comparison of the tables also shows that there has been an increase in lower paid workers (those receiving less than $19 per week). In 1928, the number of such workers was 4,391, and in 1929 this had increased to 5,592.

There were wage increases in sixteen of the industrial groups, while in nine the weekly average was decreased.

The most outstanding change in the average full week's wages took place in the jewellery manufacturing industry, where the advance amounted to $4.12 per week, followed by cigar and tobacco manufacturing, of $3.61. Increases of over $1 per week were recorded in the following groups: Builders' materials, laundries, cleaning and dyeing, leather and fur goods, metal-mining, paint-manufacturing, pulp and paper, and ship-building industries. Other increases were in Coast shipping, garment-making, oil-refining, smelting, utility group, and in the manufacture of wood (not elsewhere specified).

The principal decreases are found in explosives and chemicals, which amounted to $1.63, followed by metal trades, $1.54; breweries, $1.15; and food products, $1.14. Those having decreases of under $1 were coal-mining, contracting, house-furnishing, miscellaneous trades and industries, and printing and publishing.

The report details in tabular form the number of wage earners in each industry grouped according to the weekly wages received. The table on page 1028 is a summary of all such tables, and shows the number of employees by weekly wage groups in 1929.

Increase of Apprentices.—The number of apprentices in industry again increased over the previous year with a gain of 48, there being a total of 1,676 thus classified at the end of 1929. Commenting on the success of apprenticeship, the report states that "there appears to be no doubt that these young people are being thoroughly trained

Average Weekly Wages of Male Employees in British Columbia in 1923, 1928, 1929

Industry	1923	1928	1929
Breweries	$26 55	$28 85	$27 70

as they have no difficulty in finding employment when the period of their apprenticeship is completed."

Employment Service.—The report of the British Columbia Branch of the Employment Service of Canada summarizes the situation during 1929 in the following sentence:—"Due largely to a greatly reduced grain crop in the Prairie Provinces, the débâcle in the stock market, and an excess of immigrants over requirements, conditions during the year 1929, from an employment point of view, were the worst experienced during the past eight years."

Summarizing the business transacted, the report indicates that within the province the number of placements nearly equalled those of the previous year, but adverse crop conditions in the Prairie Provinces caused a reduction of 63 per cent in extra-provincial placements. During the year there were 107,695 applications, 44,685 employers' orders, 42,960 placements, 1,829 transfers in British Columbia; 3,955 transfers out of British Columbia.

In connection with the work accomplished on behalf of handicapped men, both ex-service and "industrial handicaps," it is shown that the total number of placements was 2,055, and of this number 540 were "regular," ranging from one week's employment to permanence, the balance, 1,515, being placed in positions where the duration of employment was expected to be less than one week. The report again emphasizes that the problem of placing handicapped ex-service men becomes more acute each year, owing to their advancing age, and the "almost constant surplus of physically fit men." It is also pointed out that the favourable weather conditions on the coast has attracted a much larger number of handicapped ex-service men than industry can absorb.

Inspection of Factories.—The report of the chief factory inspector details his administrative duties, which include the inspection of all factories under The Factories Act, industrial plants designated by the Workmen's Compensation Board, passenger and freight elevators, and laundries.

Dealing with the progress of accident prevention work, the chief inspector points to the fact that no serious accident occurred on elevators, which are required by statute to be operated by licensed operators. During the year, 446 male and 176 female elevator operators renewed their licences, while 211 male and 85 female applicants sucessfully qualified by examination as elevator operators, making a total for the year of 932 licensed operators.

There were 48 requests for the extension of the hours of work of female employees in factories. Upon investigation, all were granted with the exception of six. Twenty-four requests for permission to employ children under the age of fifteen years in canneries were granted, subject to the conditions of the Factories Act. This branch was particularly active in devoting considerable time to the enforcement of the Act respecting the hours of work of female employees in laundries, many of which are conducted by orientals. During the year, 31 informations were laid against oriental violators of the Act, and 25 were convicted, of which five were convicted of a second offence.

Nationality of Workers.—The tables showing the nationality of employees indicate that natives of English-speaking countries decreased from 72·65 per cent in 1928 to 70·34 per cent in 1929. Those from Central Europe increased to 18·56 per cent in 1929 from 17·02 per cent in 1928. Natives of Canada and Newfoundland increased from 38·07 per cent

in 1928 to 39·17 per cent in 1929. The percentage of those from the British Isles again fell, the figures being 28·73 per cent in 1929 as against 30·85 per cent in 1928.

The percentage of Asiatics employed shows an increase for the first time since 1926, rising to 10·01 per cent from 9·33 per cent in 1928. The actual number employed in 1929 was 12,253, an increase of 1,520 over the previous year. Chinese employees increased by 251, Hindus by 156, and Japanese by 1,113.

Labour Disputes.—The section of the report covering labour disputes shows that 482 employees were affected by a strike or a lockout for a total of 3,320 working days, constituting the smallest number on record.

British Columbia Male Minimum Wage Act

A chapter of the report deals with the operations under the Male Minimum Wage Act. The first Act, passed by the Legislature in 1925 (Labour Gazette, January, 1926, page 17), was repealed following a decision by the Supreme Court of Canada, which declared the Act invalid (Labour Gazette, November, 1928, page 1310). Subsequently, in March, 1929, a new Male Minimum Wage Act was adopted (Labour Gazette, June, 1929, page 607).

The report reviews the administration of the new Act, particularly the legal proceedings arising out of the application of the drug clerks for an inquiry into the conditions of their employment. The Male Minimum Wage Board had ruled that it had no authority to conduct an inquiry on the ground that the occupation of the applicants was a "profession" and did not fall within the scope of the Act, this opinion being later upheld by the British Columbia Supreme Court (Labour Gazette, November, 1929, page 1317). The Court of Appeal of British Columbia, however, reversed this decision and directed the issue of a mandatory order to the Board to hear and determine the question raised in the application of the drug clerks (Labour Gazette, June, 1930, page 730). (The order finally made by the Board in this case was given in the Labour Gazette, August, 1930, page 917.) In addition, the Board conducted inquiries upon application from cab and taxi drivers, warehousemen, and stationary engineers. In connection with the last-named class, the Board issued an order (the first under the new Act) establishing the minimum wage (Labour Gazette, March, 1930, page 282). As regards taxi drivers, the Board decided that it was not advisable to establish a minimum rate at the present time, while in the case of warehousemen it was considered that there was not sufficient evidence to warrant the establishment of a minimum wage for this class.

British Columbia Hours of Work Act in 1929

The operations under the Hours of Work Act, 1923, are also outlined in the annual report of the Provincial Department of Labour. Pointing to a gradual decline in working hours since the Act came into effect, the report emphasizes that it is being enforced in such a manner as not seriously to affect the industries of the Province. "The beneficial effects of this legislation," it is stated, "can be seen chiefly in the different branches of the lumbering industry where the average working hours, calculated from the returns received, show a reduction in some cases by as much as seven hours per week."

During 1929 the number of exemptions granted by the Board of Adjustment, administering the Act, totalled 93, a decrease of 68 from the total of 1928. Of the 93 permits granted, 50 were for the lumbering industry, 15 for the printing and publishing industry, and 5 for contracting. Other exemptions covered the manufacture of rubber tires, garment making, paper making, and furniture manufacture. These permits are strictly of a temporary nature, ranging from a total of one hour to one hour per day for a week or longer.

Industries which show an average decline of six hours and over in the working-week are builders' materials, coast shipping, and pulp and paper manufacture, followed by contracting, explosives and chemicals, miscellaneous trades and industries, smelting, and the manufacture of wood (N.E.S.), with a reduction of over three hours per week; breweries, food products, and street railways, etc., with a decline of over two hours in the average working-week.

As further proof that the Province has accepted the general principle of an eight-hour day, it is stated that from a total of 116,623 employees reported by the 5,065 firms

making returns, 101,625, or 87·15 per cent, were working on an eight-hour day; 10,968, or 9·40 per cent worked over eight but not more than nine hours per day; whereas only 4,030, or 3·45 per cent of all employees, were working in excess of nine hours per day.

The average working-hours for all occupations covered in the statistical tables was again reduced during the year 1929, the average weekly working-hours being 48·25, compared with 48·43 in 1928, 48·55 in 1927, and 48·84 in 1926.

The accompanying table shows the trend of average weekly hours in all industries covered by the report for the past three years.

As indicated in the table, some industries work more than a forty-eight hour week, and anticipating any questions as to how this is possible under an eight-hour day law, the report cites the example of the lumbering industry as follows:

"The regulations promulgated by the Board of Adjustment, and passed by Order in Council, permit all operations carried on east of the Cascade Mountains to operate on a nine-hour basis, which is fifty-four hours per week. The reason for this regulation is apparent to all acquainted with weather conditions during the winter months. The smelting and metal-mining industry operate on a fifty-six-hour week; Coast shipping being an industry which does not come within the scope of the Act, the Board has no jurisdiction. There is also the food products group, where only a very small number of the employees engaged come within the limits of the Act."

AVERAGE WEEKLY HOURS OF WORK BY INDUSTRIES IN BRITISH COLUMBIA

Industry	1927	1928	1929
Breweries	$45 60	$48 22	$46 77

Minimum Wages for Women in British Columbia in 1929

The twelfth annual report of the Minimum Wage Board of British Columbia, which is included in the annual report of the Department of Labour, details the administration of the Minimum Wage Act during the year ended December 31, 1929. The Act became operative in 1918, and is administered by a Board of three members, of which the Deputy Minister of Labour is chairman.

Under this legislation nine orders respecting minimum wages have been put into effect, and these include practically all classes of work in which women and girls are engaged throughout the Province with the exception of domestic servants, fruit pickers, farm labourers and their employers who are excluded from the scope of the Act.

The total number of women and girls within the scope of the Act during 1929, as indicated from the returns from 3,602 employers, was 20,766. In addition to this total, there were a number of returns received too late to be classified in the statistics.

The report states that as the existing orders are giving adequate protection and no petitions for their revision having been received from either employers or employees, there were no amendments to the regulations during 1929. However, the Board contemplates amending the manufacturing order by adding to the schedules for learners a list of occupations which are not included at the present time. These are either new vocations or those in which women and girls were not working when the order was put into effect. No changes in wages are anticipated.

Touching on its duties in enforcing the regulations, the Board states that it is doing so in "an unobtrusive and tolerant manner", and observes that "considering that the work of over 20,000 women is covered by the orders, and human nature being what it is, the most optimistic could never expect 100 per cent compliance." However, it is pointed out that most employers are obeying the law and treating their staffs fairly. Through pay-roll in-

spections, routine investigations by officials, and from complaints lodged by employees, or on their behalf, some infringements were revealed. Frequently complaints have been found groundless usually through an apparent misunderstanding of some phase of an order or an incorrect and incomplete knowledge of the circumstances.

In cases where employees had been paid below the legal minimum, adjustments were effected through the Board's efforts. By these methods, arrears of wages totalling $2,838.61 were paid during the year to employees throughout the Province. This amount represents the difference between what they should have received under the various orders and what they were paid by employers who were not complying with the law. These arrears were collected on behalf of employees working in hotels, restaurants and cafes, florists' shops, confectionery stores, departmental and other mercantile establishments, laundries and cleaning plants, beauty parlours, fruit canneries, commercial and professional offices, millinery and dress-making shops, and factories of various kinds. It is noted, that, as in previous years, "the offending employers are usually foreigners, or owners of businesses, who through lack of systematic management, can see no way to reduce their overhead expenses except by cutting wages."

In 1929 eleven convictions for violations of the Act were obtained, and one was withdrawn after settlement had been made. Six of the cases originated in restaurants or cafes. Mercantile establishments accounted for two, a law office and a real estate brokerage for one each, while a milliner and a dressmaker were the offenders in the balance of the cases. All twelve cases were in the city of Vancouver.

The following is a summary of the minimum wage orders in force, showing the weekly and hourly rate for experienced workers in the various classes:

Mercantile industry, $12.75 (hourly rate, 26⁹⁄₁₆ cents).
Laundry, cleaning and dyeing industries, $13.50 (hourly rate, 28⅛ cents).
Public housekeeping, $14 (hourly rate 29⅛ cents).
Office occupations, $15 (hourly rate 31¼ cents).
Personal service occupation, $14.25 (hourly rate, 29¹¹⁄₁₆ cents).
Fishing industry (canneries), $15.50 (hourly rate, 32⁷⁄₂₄ cents).
Telephone and telegraph occupation, $15 (hourly rate, 31¼ cents).
Fruit and vegetable industry, $14.40 (hourly rate, 30 cents).
Manufacturing industry, $14 (hourly rate, 29⅛ cents).

Of the total of 20,766 women and girls employed in all occupations, 3,741, or 18.02 per cent were reported as receiving the actual minimum for their respective classes of work. In the higher scales of pay it is noted that 12,848 or 61·87 per cent of all those reported were receiving wages in excess of the minimum, leaving 4,177, or 20·11 per cent who were paid below the minimum. This latter class includes young girls and inexperienced workers for whom lower rates are set, and employees of experience whose working week was shorter than 48 hours, with a *pro rata* reduction in pay.

The average weekly wage for all occupations for experienced employees over 18 years of age during 1929 was $17.64 as compared with $17.52 in 1928.

In five occupations—mercantile, office, personal service, manufacturing and fishing—noticeable increases over the previous year's weekly averages for experienced women workers over 18 years of age are recorded for 1929. The average in laundry, dyeing and dry cleaning establishments remained practically the same for employees 18 years of age and over, being 1 cent per week more than in 1928. The fruit and vegetable industry indicated a slight decrease for experienced time workers, while an increase of $2.26 is revealed for piece-workers who have been employed at least two months in the industry. The average weekly wage for skilled operators in the telephone and telegraph occupation dropped from $18.32 in 1928 to $18.20 in 1929. However, the working week was slightly shorter, being 40.94 hours in 1929 as against 41.13 in 1928 when the higher rate prevailed.

The table on page 1032 presents a summary of the chief statistics dealing with all occupations covered by the regulations in recent years.

As regards the marital status of employees, the report shows that the relative proportion of married, widowed, and single women employees, gainfully employed, has hardly altered during the past three years. From the returns for 1929, the following percentages are indicated: Married, 20.11; widowed, 3.86; single, 76.03.

Dealing with the results of minimum wage legislation, the report makes the following comment:—

"Wages have been increased in a marked manner and held at levels considerably in advance of the actual legal minimum, contrary to the assertions of many persons that the minimum would become the standard. In 1929 61.87 per cent of the employees had pay-cheques higher than the rates prescribed by law, and so an oft-repeated argument of those opposed to this form of legislation is

refuted. In all fairness we must admit that there have been a few other contributing factors to this rise in women's wages, but these are far less potent than the Statute and its protection. In some of the American States, where their minimum wage laws have been repealed, declared *ultra vires,* or rendered ineffective pending legal decisions, the employees have suffered a noticeable cut in wages, and have been unable to effect a return to former levels since the legal backing of minimum wage legislation was withdrawn."

SUMMARY OF ALL OCCUPATIONS

—	1929	1928	1927	1926	1925
Number of firms reporting	3,602	3,425	3,455	3,123	2,804
Number of employees—					
Over 18 years, or experienced	18,390	17,191	15,697	13,725	12,181
Under 18 years, or inexperienced	2,376	2,186	1,810	2,245	1,718
Total weekly wages—					
Employees over 18 years, or experienced	$324,376 19	$301,223 03	$267,787 44	$234,001 53	$211,713 38
Employees under 18 years, or inexperienced	$ 24,757 00	$ 23,470 00	$ 18,820 00	$ 23,513 50	$ 17,764 00
Average weekly wages—					
Employees over 18 years, or experienced	$17 64	$17 52	$17 06	$17 05	$17 38
Employees under 18 years, or inexperienced	$10 12	$10 74	$10 40	$10 03	$10 34
Percentage of employees under 18 years, or inexperienced	11·44%	11·28%	10·34%	14·59%	12·36%
Average hours worked per week	43·87	44 05	43·92	43·82	43·58

In a more definite manner, the following table presents the average weekly wage rates in the various industries before the Act came into effect in 1918, and in 1929 after twelve years practical testing of the legislation.

AVERAGE WEEKLY WAGE RATES BEFORE AND AFTER MINIMUM WAGE ACT IN BRITISH COLUMBIA

Mercantile Industry

	1918	1929
Average weekly wages—		
Employees over 18 years	$12.71	$15.06
Employees under 18 years	7.70	9.08
Percentage of employees under 18 years	15.49%	13.70%

Laundry Industry

Average weekly wages—		
Employees over 18 years	$11.80	$14.60
Employees under 18 years	9.78	9.83
Percentage of employees under 18 years	21.80%	12.22%

Manufacturing Industry

Average weekly wages—		
Experienced employees	$12.54	$16.74
Inexperienced employees	9.57	10.09
Percentage of inexperienced employees	28.64%	18.73%

Telephone and Telegraph

Average weekly wages—		
Experienced employees	$15.55	$18.20
Inexperienced employees	11.90	11.24
Percentage of inexperienced employees	8.70%	11.96%

Personal Service Occupation

Average weekly wages—		
Employees over 18 years	$13.83	$17.41
Employees under 18 years	6.96	8.18
Percentage of employees under 18 years	15.38%	8.89%

Office Occupation

	1918	1929
Average weekly wages—		
Employees over 18 years	$16.53	$20.55
Employees under 18 years	10.88	12.75
Percentage of employees under 18 years	7.45	3.46%

Public Housekeeping Occupation

Average weekly wages—		
Employees over 18 years	$14.23	$16.54
Employees under 18 years	11.77	13.98
Percentage of employees under 18 years	5.51%	4.29%

Mr. Gustave Francq, chairman of the Women's Minimum Wage Commission of Quebec, recently announced that the Commission had begun investigations with a view to establishing wage rates for female employees in the cardboard box, fur, and corset industries in the Province, and that public meetings of employers and workers would shortly be called to discuss the minimum wages for the various occupations. In regard to the observance of the existing orders of the Commission Mr. Francq stated that in very few cases was it necessary for the Commission to bring delinquent employers before the Courts, and that methods of persuasion were usually sufficient. In order to educate the employers concerning the working of the law, the commission has sent two inspectors through the province, who will give all necessary explanations and at the same time report on the success obtained by the new regulations.

WORKMEN'S COMPENSATION IN BRITISH COLUMBIA, ALBERTA AND NEW BRUNSWICK, 1929

British Columbia

THE thirteenth annual report of the Workmen's Board of British Columbia, being for the calendar year 1929, shows a continued increase in the number of workmen covered by the provisions of the Act, this increase being accompanied by an increase in the number of compensable accidents occurring during the year.

Numbers benefiting.—The report states that there are now upwards of 175,000 workmen in the Province to whom the benefits of the Act are applicable. Since the present law came into effect thirteen years ago, 319,090 accidents have been reported under it. Of that number 2,923 resulted in death, and 7,294 others left the injured workman either totally or partially disabled for life. At the close of 1929 there were on the pension list, as a result of those fatal and disabling accidents, 688 widows; 993 children under 16 years of age; 121 dependent mothers; 40 dependent fathers; and 40 other dependents. The permanently disabled pensioners number 1,504, making in all 3,386 persons in receipt of regular monthly pensions at the end of 1929. There are in addition, at any given time during the year, nearly 2,000 temporary total disability cases requiring only time-loss compensation and medical attention. Approximately 1 per cent of the workmen of the Province are off duty at any given time as a result of temporary disabling accidents. The pensioners, the temporarily incapacitated workmen, and their dependants number close to 10,000 the year round.

Payroll Increase.—Industrial development of the Province is indicated by the growth in total earnings of workmen engaged in the industries within the scope of the Act. For the purpose of levying assessments the payrolls of all employers are checked each year. The payroll figures for 1921 totalled $129,518,375; for 1922, $130,592,502; for 1923, $153,548,944; for 1924, $155,410,227; for 1925, $164,216,219; for 1926, $172,862,307; for 1927, $175,315,992; and for 1928, $183,576,470. Inasmuch as it required several months to complete an audit of all payrolls the exact figures for 1929 are not yet available. Present information would indicate that they will reach $185,000,000.

Not only are payrolls increasing each year, but also the number of employers shows a corresponding increase. At the end of 1923 there were 6,524 firms on the records, within the scope of the Act. The number rose to 6,838 in 1924; to 7,197 in 1925; to 7,613 in 1926; to 8,243 in 1927; to 8,688 in 1928; and on December 31, 1929, the number had reached 8,888. New employers to the number of 1,401 employed labour for the first time in 1929. Former employers numbering 206 resumed operations. One hundred and fifty-nine employers whose operations were not compulsorily under the Act had the benefits of the Act extended to their employees by special application during 1929. There were 200 more firms actively operating on December 31, 1929, than at the end of the preceding year, after making deductions of all firms which had discontinued during the year.

Rehabilitation.—"One of the problems," it is stated, "which constantly confronts permanently crippled workmen is that of re-establishment at work in which their disabilities will be a lesser handicap than the occupations for which they are already trained. The logger who for years has followed work in the woods meets with a crushing leg injury and is physically unsuited to return again to his former occupation. The workman's disability may be such that he is 30 per cent impaired. His pension award must be supplemented by earnings at work he can do. A creditable number of employers make a practice of finding a place for workmen crippled in their employ. If a sufficiently large number followed that practice the rehabilitation problem would solve itself. Only a limited number of workmen can be successfully retrained for lighter tasks suited to their particular needs. Re-establishment is accomplished in a number of cases by commuting future pension payments so that the workmen may retrain themselves by instruction courses for various trades and other occupations they are physically able to follow. Others re-establish themselves in small businesses and in agricultural pursuits. For those crippled workmen who for various reasons must be absorbed again in industry the co-operation of individual employers is necessary."

Safety and First Aid.—The report comments on the continued increase in accidents, notwithstanding the movement for their prevention, and emphasizes the importance of the personal factor in safety work (see page 998 of this issue). It dwells on the great value of an efficient "First Aid" service, which, "in addition to providing the machinery for prompt, thorough, and intelligent investigation of alleged accidents, assists in preventing un-

necessary suffering and prolonged and costly disabilities. . . . . The advantage of prompt first-aid service for all injuries, however slight, should be kept constantly before the workmen, and nothing should be left undone by the employer in facilitating the rendering of competent and adequate first aid."

Claims.—While the increase in total payrolls during the past year indicated a larger number of workmen employed in industries under the Act, there was also an increase in the number of accidents. The accidents reported during 1929 were 36,750. The figures for the preceding years were 32,793 in 1928; and 30,066 in 1927. Two more fatal accidents were reported than in in 1928, the figures being 253, in 1929; 251 in 1928; 219 in 1927; 198 in 1926; 213 in 1925; 236 in 1924; and 268 in 1923. The non-fatal accidents for the past years were as follows: 36,497 in 1929; 32,542 in 1928; 29,847 in 1927; 30,167 in 1926; 27,563 in 1925; 25,566 in 1924; and 24,184 in 1923. Each year a further 3,000 accidents or more are reported, but are such as to necessitate no medical aid or time-loss compensation, first-aid service being found sufficient for such injuries sustained. There were 19,045 cases which required both medical attention and time-loss compensation. For the year there was an average of 3,062 accidents reported each month or over 120 for each working-day.

The industry of lumbering accounted for 42 per cent of all time loss accidents; the construction class, nine per cent; general manufacturing, 7 per cent; coal mining, 6 per cent; the railroading groups, 5 per cent; metal mining, 5 per cent navigation and stevedoring, 5 per cent; and all other classes 21 per cent. The fatal accidents were distributed as follows: lumbering, 39 per cent; metal-mining, 8 per cent; railroading groups, 6 per cent; coal-mining, 6 per cent; construction, 4 per cent; and all other classes 37 per cent.

Sixty-seven per cent of those injured claim British or Canadian nationality and 48 per cent were married. The fact that only 682 of the 36,750 persons injured last year claimed to be carrying any other type of accident insurance than that provided under the Act indicates the extent to which the statutory benefits are depended upon during periods of disability arising from accident.

Finance.—The report explains the method used in handling the reserve funds as follows: "Section 16 of the Act provides that the awards to widows of workmen killed in industry shall be paid to them in monthly payments. Similar provision is made in section 20 for payment of awards to permanently disabled workmen. By reason of these sections portions of awards to dependants and permanently incapacitated workmen remain unpaid. These are invested in compliance with the provision of section 53 of the Act, in securities permitted under the 'Trustee Act;' e.g., Dominion, provincial, and municipal bonds. These unpaid portions of awards are invested in the names of the Minister of Finance and the Board jointly. The amount of these 'capitalized reserves' is calculated on reliable actuarial tables to be exactly sufficient, using both principal and interest, to pay the remaining portions to become due to the dependants and crippled workmen during the months and years to come, in respect of accidents which have already occurred. The accidents of any given year are required to be paid for in full out of assessments collected from employers operating in that year. The current year's employers meet their financial obligation to dependants left and to workmen crippled through accidents of that year, and they leave no legacy of accumulating obligations for those employers commencing business in the years to come. When an award is made the full cost is forthwith taken out of the current year's assessments, and the employers are as finished with that claim as if they had paid same in compliance with a judgment of a Court."

The statement of the condition of the Accident Fund shows that during 1929, the amount collected from employers including assessments and interest, was $3,360,130; collections from employers for medical aid amounted to $458,296; interest on reserve investments to $333,751; and collections from workmen for medical aid dues to $294,763, making total collections for the year $4,446,940.

Disbursements during the year included $1,955,902 paid to workmen in compensation, and $752,623 paid for physicians, hospitals, drugs, etc. Pensions were paid during the year to the value of $957,304; payments to dependants residing in Canada (under a statute of 1919) totalled $25,177. The value of future payments of claims during 1929 is placed at $857,057.

Cost of Administration.—It is stated that a smaller percentage of the total assessments collected during 1929 was used for administration purposes than in any year since the Act came into effect, the figures being 2·24 per cent for 1929 and 2·34 for 1928. "Consequently out of every $100 collected in 1929, $97.76 was used in providing compensation to injured workmen and their dependants."

The report includes numerous tables giving statistics regarding finalled claims by industry; details of finalled temporary disability claims by industry, wage loss, length of disability, sex, age, etc.; nationality of workers; causes of accidents; nature of disability, etc.

Alberta

The Workmen's Compensation Board of Alberta, in their twelfth annual report, review the work carried on under the Act during 1929. This work was in greater volume than in previous years, the number of industrial accidents, as well as the number of workmen engaged, showing a considerable increase. A total of 14,899 accidents were reported to the Board during the year, an increase of 1,499 over the number reported for the year 1928. The increase is accounted for by the extensive building program and generally increased industrial activity throughout the Province during the year 1929. Of the 14,889 accidents reported during the year, 72 proved fatal, 146 resulted in some permanent disability, and 14,681 were of a temporary nature. Compensation covering temporary disability totalling $507,438 was paid. The sum of $487,731 was transferred to the pension fund to cover awards in the case of permanent disabilities and fatal accidents, and $139,525 was set up as a liability to cover pending claims.

Net assessments levied during the year, together with those outstanding at December 31, 1929, totalled $1,373,771, as compared with $1,190,531 for the year 1928. Of this amount $1,345,404 was collected, leaving $28,368 unpaid as at December 31, 1929. Contributions on account of medical aid totalled $298,044, while payments for medical services amounted to $265,636. The administration expense (excluding that made on account of Mine Rescue) was $94,737 or 5·23 per cent on cash receipts, as compared with 5·17 per cent for the year 1928.

The transfer from the Accident Fund to the Pension Fund of $487,731, together with the interest, $104,123, earned by the fund, less the amount paid to pensioners, $390,854, brings the balance at the credit of this fund at December 31, 1929, to $2,247,020, out of which 245 widows and 458 children of deceased workmen, as well as 337 workmen who met with permanent disabilities, are receiving monthly payments.

Under the provisions of the Privy Council Order No. 558, $15,485.45 was refunded to the Board by the Department of Soldiers' Civil Re-Eestablishment on account of Compensation and Medical Aid payments made to workmen to whom the Workmen's Compensation Act (Accident Fund) applies.

During the year an appointment to the staff was made by the Board of an officer whose time will be devoted wholly to accident prevention, seeing that proper precautions to safeguard workmen are taken in all works and undertakings under the Act, and generally to impress upon employers and workmen alike the necessity of such precautions in order to cut down the number of accidents and reduce accident costs. An appointment was also made of a General Superintendent of Mine Rescue work, whose whole time will be devoted to the general supervision of the various cars and stations and all activities in connection therewith

The statistics relating to claims made during 1929 are summarized in the report as follows:—

Number of employers within the scope of the Act as at December 31, 1929.	5,436
Number of accidents reported during the year 1929..	14,899
Number of accidents and claims not finally disposed of as at December, 1928..	2,772
Number of claims disposed of by award of pension or payment of compensation..	7,138
Number of claims disposed of by payment only of account for Medical Aid..	3,734
Number of accidents disposed of for which no application for compensation was received..	457
Number of accidents disposed of on which no compensation was due.. ..	3,733
Number of claims on which no further payments have to be made..	723
Number of accidents awaiting further reports and on which no payments have been made..	1,886

Of the 14,899 accidents reported during the year, the largest group (3,305) occurred in class 1 (mining). The manufacturing group (39) was second with 2,263 accidents; followed by group 15 (which includes quarrying, brick and glass works, cement works, etc.) with 1,667 accidents. The most frequent cause of accidents was "flying and falling objects;" closely followed by "machinery, tools and equipment;" and "falling and tripping." Numerous accidents are also attributed to "falling rock, coal and clay;" "protruding nails and spikes;" "being run over, struck or caught between cars;" "burns and scalds;" "falling timber and poles;" "being crushed;" and "striking against objects."

The time loss caused by permanent disability cases was 7,615 days; and by temporary disability cases 146,602 days.

Accident Prevention.—On this subject the Board state their experience as follows:—

"Some industrial institutions have been conducting accident prevention work for years, others are becoming interested, but there appears to be a mutual distrust or misunder-

standing between employers and employees in some industries in connection with this work, which will have to be removed before that wholehearted co-operation so desirable can be obtained.

"In building construction, where working conditions change hourly, the need for greater co-operation between workmen and employers is very apparent. Lumber containing protruding nails caused many accidents; improper scaffolding, unguarded openings in floors also contributed their quota. Many minor accidents develop into something serious by a process of infection because proper precautionary measures have not been adopted. Simple First Aid remedies to some of these minor accidents would prevent a great deal of suffering and loss of time.

"Accident Prevention Committees in industry are encouraged by the Board with the result that we have monthly reports from 334 committees. Many of these committees are doing excellent work, and it is acknowledged that where they are encouraged by the employers, accidents have been materially reduced.

"In our endeavour to minimize accidents from the use of machinery, we have communicated with Eastern manufacturers, requesting safety devices to be provided for all machinery shipped into Alberta, and we would solicit the co-operation of the employers by asking them to insist that machinery liable to cause accidents is properly guarded before installing.

"The Board has received complaints from time to time from workmen employed in garages about ventilation, or lack of ventilation. Carbon monoxide poisoning is a hazard which garage employees are subjected to if garages are improperly ventilated. We have notified all garage operators that a proper system of ventilation must be installed. We find that where provision is made to change the air in garages three times per hour, using an exhaust fan and galvanized piping of sufficient capacity and properly located, and also flexible hose to connect the exhaust of cars while in operation in the workshop, a very great improvement in the ventilation is secured.

"The organizing of first aid classes was continued during the year and four hundred certificates were issued to workmen who attended these lectures and qualified in first aid work. These certificate holders, now numbering 2,711, are employed by various employers throughout the Province, and the first aid attention they are able to render to injured fellow workers should tend to lessen the disabilities resulting from industrial accidents. The campaign of accident prevention will continue this year, and every effort will be made to enlist the sympathy and co-operation of the employers and employees with a view of removing the unnecessary hazards from industry, and to encourage and promote accident prevention work."

New Brunswick

The eleventh annual report of the Workmen's Compensation Board of New Brunswick outlines its activities under the Act during the calendar year 1929.

In the financial statement the total income for the year 1929 is estimated at $716,775.06 from which is deducted the cumulative deficit carried over from the year 1928 of $165,342.96, leaving a net estimated income of $551,432.10. The estimated expenditure is shown at $686,-597.96, leaving an estimated deficit of $135,-165.86. It is pointed out that these figures, as in other years, do not purport to be the actual amount of money to the debit or credit of classes, but show what has been collected from the provisional statements filed, and what the Board think, after going over the data in its possession, is a fair income to be expected from the amount to be collected owing to the expected increase of the actual pay-rolls over the provisional. The expenditure shows the same condition. To the amount paid out is added a sufficient sum which the Board estimates will cover the cost of claims in assembly and the claims which may be existing as of December 31, 1929, but not reported to the Board, and also the estimated amount for claims reported partly but not completed. It is stated that when the actual figures for 1929 are received and all collections made and all claims adjusted, the figures may vary materially.

There is no information available in the report concerning accident statistics for the year 1929 as the time for reporting accidents was not ended at the date of publication. Final figures, however, are given for the year 1928, and the tabular summaries indicate for that year the number of accidents, cause, locality, average age of workmen, average wage, etc. In 1928 there were 7,736 accidents of which 34 were fatal, while in 1927 there were 6,966 accidents with 28 fatalities. In 1928 the average age of workmen involved

in accidents was 33·46 years, and their average wage was $19.83 per week. The net cost of administering the Act was $54,780.36, of 7·6 per cent of the total assessment.

From 1919 to 1928, the annual compensation cost of accidents was as follows: In 1919, $376,007.45; 1920, $548,302.83; 1921, $469,675.69; 1922, $496,676.40; 1923, $564,890.08; 1924, $620,756.34; 1925, $570,883.19; 1926, $485,772.14; 1927, $543,087.88; 1928, $641,132.93.

The accompanying table shows the number of industrial accidents according to degree of severity from 1919 to 1928 inclusive.

Industrial Accidents in New Brunswick 1919–1928

—	1919	1920	1921	1922	1923	1924	1925	1926	1927	1928	Total
Fatal Accidents	25	47	35	30	37	38	31	23	28	34	328
Permanent Total	.....	.....	1	1	2	1	1	.....	.....	1	7
Contingency	.....	.....	.....	.....	4	8	11	16	5	15	59
Permanent Partial	183	254	241	245	244	261	241	218	269	312	2,468
Temporary Total	1,832	2,967	3,032	3,225	4,047	3,823	3,612	3,658	3,913	4,475	34,584
Minor and Medical Aid only	656	796	1,037	1,310	1,835	1,978	2,075	2,150	2,751	2,899	17,487
Totals	2,696	4,064	4,346	4,811	6,169	6,109	5,971	6,065	6,966	7,736	54,933

Children in Canneries in United States

The Children's Bureau of the United States Department of Labour recently issued Bulletin 198, entitled: "Children in Fruit and Vegetable Canneries: a Survey of Seven States." The States included in the inquiry were Delaware, Indiana, Maryland, Michigan, New York, Washington and Wisconsin. It is stated that investigations in important canning States, such as Maryland and New York, gave publicity to the extensive employment of very young children in canneries and the deplorable conditions, especially the long hours and the insanitary surroundings, under which many of them worked. Perfection of canning machinery changed the character of the cannery so that the old plea that cannery work for children is more like agricultural than factory work lost whatever force it may have had, while at the same time the increasing use of machinery, such as the corn-husking and the closing machine, and the installation in an increasing number of canneries of these as well as of such labour-saving devices as the mechanical conveyor, eliminated much of the hand labour formerly done by children. Power machinery requires adult operators, chiefly men, and between 1909 and 1919 the proportion of men among the wage earners in fruit and vegetable canneries, hitherto almost stationary, increased from 42 to 50 per cent.

The present inquiry, the only extensive one in many years, showed that wherever fruit and vegetables were being canned children were being employed. Although the most flagrant abuses of the past have been corrected, many of these workers are very young, and many are employed for exceedingly long hours and at night. It is the intent of most of the laws to protect children in canneries equally with those in other manufacturing industries, but in actual practice the full measure of protection is being withheld in many important canning districts.

The report points out that even in States that have laws for their protection a considerable number are employed in violation of these laws. The extent of such violation varies widely in the different States. For example, the proportion of those under 16 who were below the legal working age (about one-fourth of the total number included in the study) varied from 43 per cent in one State to 2 per cent in another, and the proportion of minors employed in violation of legal working hours varied from 12 per cent to 97 per cent. "In spite of the greater difficulty of enforcing legal standards in the canning than in other manufacturing industries, this variation indicates that where a sincere and well-considered effort is made on the part of the State to see that the law is enforced it can be done. . . . Where the laws and the thoroughness with which they are enforced discourage the exploitation of children, canners can and do operate successfully without employing young children."

MUNICIPAL MEDICAL SERVICE IN SASKATCHEWAN

THE municipal doctor scheme in Saskatchewan, to which reference is made on page 997 of this issue, is described by Dr. F. C. Middleton, Deputy Minister of Public Health for the Province, in an article appearing in the *Canadian Public Health Journal*, July, 1930. The writer points out that over three-quarters of the population of the Province may be classed as rural residents, and that the problem of providing scattered settlements with adequate medical and nursing services has always been urgent. Recently the Legislature applied to the solution of this problem the principle of co-operation, which had been tried with success in several other lines of activity in the Province. This principle was embodied in an amendment made in the session of 1928-9 to the Rural Municipality Act. The Act as amended enables municipal councils to make expenditures for inducing doctors to reside in the municipality or to guarantee their income up to $1,500 a year. Where there is no urban centre in a municipality the grant or guarantee may be given to a doctor residing in a village in an adjoining municipality. When such a grant is given to a physician, the primary purpose is to ensure that a doctor is located within a reasonable distance, and the agreements as to what professional services will be required for the grant vary considerably. In practically all cases the doctor is required to do the duties of medical health officer and to give free medical services to indigent cases within the municipality; in some cases mileage charges are reduced, and in some, reduced charges are made for maternity cases. Some thirteen rural municipal councils pay grants varying from $900 to $1,500 a year.

The same Act provides that the council may submit to the electors a by-law empowering the council to engage the services of a legally qualified medical practitioner for the municipality at a salary not to exceed $5,000 per annum. When a municipality has voted to engage the services of a municipal doctor, the council draws up a written agreement outlining what services the doctor is to give the people. The agreement usually requires as follows:—that the municipal doctor act as medical health officer; that all indigent cases within the municipality be given free medical care; that all resident ratepayers, their families and dependants be given free medical service, and in some municipalities hired help is included in the free service and such other residents as the agreement may call for. Free vaccination against smallpox and inoculation against diphtheria for both pre-school and school children is included, and in some municipalities the doctor is required to medically examine all the school children in the municipality once a year.

Nineteen municipalities have engaged municipal doctors, several others have passed the necessary by-law and more are considering the scheme. Invariably where one municipality has engaged a municipal doctor, the adjacent municipality is not long before it also engages a municipal doctor so that they appear on the map in groups of two and threes adjoining one another.

The salary paid varies from $3,500 to $5,000 a year according to the district. Based on $5,000 a year it costs about $3.85 taxation per quarter section per year for medical service. A rural municipality is an area 18 miles square so that with a doctor located about the centre it would mean that he would be within reasonable distance of all his patients.

In one municipality where a municipal doctor has been engaged for a number of years, the municipal council also pays for the services of a nurse for any of its ratepayers for a period of fifteen days in any one year, when in the opinion of the doctor a nurse is required. A nurse is supplied at the expense of the council for all normal maternity cases for nine days, and longer if the doctor thinks it necessary. The nursing service under this arrangement cost this municipality in 1928, $2,053. This municipality has a population of 1,350.

"The success or failure of the municipal-doctor scheme," Dr. Middleton concludes, "depends largely on the doctor employed. Financially, the doctor is much better off because he has no bad debts. From the public-health view-point this system next approaches the full-time health unit, and the fact that not one municipality which has ever tried the scheme has repealed the by-law, is evidence that it is satisfactory to the people."

The Governor of the State of Michigan appointed a commission during August to study the subject of old age pensions. The commission is composed of five members, including Dennis R. Bett, of the Machinists' Union.

NATIONAL RESEARCH COUNCIL OF CANADA

Recommendations on Spray Painting

THE National Research Council of Canada recently published Bulletin No. 15, prepared under the auspices of the Associate Committee on Spray Painting, giving a review of literature dealing with health hazards in spray painting, and concluding with recommendations for safe methods of operation. In the introduction it is stated that during the past decade, the spraying of surface coatings by compressed air has become extensively used in industry by contracting painters, railroads, shipyards, furniture manufacturers, enamel ware manufacturers and the automobile industry. "Spray coating, in fact, has almost revolutionized the process of painting. It could not be expected that this great change in the method of using paint could occur without creating certain problems affecting safety and health."

The question of the health hazard connected with the spraying of paint was referred to the National Research Council by the Federal Department of Health late in 1926. Prior to this, discussions upon the health hazard had taken place in labour organizations, with the result that the whole question was brought forward at a general Labour Assembly held in Montreal, by which it was referred to the Dominion Council of Health. It was pointed out that the use of the paint-spraying machine must, in all probability be considered as permanently established, but that there is a menace to the health of the operators in the improper application of this device; this menace is due to the pigments and insoluble ingredients used, such as lead, silica, etc., and to the inhalation and local irritative action of solvents and driers used in the material sprayed.

The National Research Council appointed an Associate Committee on Spray Painting; to this committee was assigned the task of considering all phases of the question and recommending the action which, in the opinion of the committee, should be taken by the National Research Council. Three main steps were taken by the committee. In the first place, a detailed questionnaire was prepared and submitted to the Federal Department of Health and the Health Departments of Ontario and Quebec, the two largest industrial provinces in Canada, and also to organized labour. The purpose of this questionnaire was to ascertain what information was available in the files of the health departments and labour organizations with respect to the health hazard connected with the use of the spray painting machine. None of the above organizations was able to answer the questionnaire, but all of them replied by letter giving such information as they had available.

The second step taken was to gather the literature on the subject, including reports and papers which have been published in connection with investigations already carried out. The information gained from the study of the material is presented in the present report.

A third step was also taken in order that the members of the committee might have personal knowledge of the conditions under which paint spraying operations are carried out in Canada. The committee visited twelve representative industrial plants using paint spraying equipment in the Montreal and Toronto districts. In these plants, which employed from two or three to more than 60 operators, lacquer, enamel, varnish or paint was being sprayed on automobiles, stoves and ranges, pianos, radio and gramophone cabinets, aeroplanes, ships, furniture, kitchen and household utensils, street cars, motor buses, and machinery. The committee thus became familiar with the general conditions under which paint spraying operations are carried out in Canadian industries.

Recommendations

After a careful study of all the information found in the accompanying report, the committee is of the opinion that there are certain definite health hazards connected with spray painting, and the committee offers the following conclusions and recommendations for the consideration of the constituted public authorities who are responsible for dealing with such matters.

(1) The more toxic of pathogenic ingredients in the material to be sprayed should be reduced to a concentration below that which constitutes a health hazard. This will involve especially lead (which present knowledge would indicate should not exceed in concentration, one per cent of the material used for spraying), benzol, turpentine and silica, and certain alcohols (methyl, butyl, allyl and amyl) benzine, gasoline, toluol (toluene) xylo (exlene) tetralin and tetrachlorethane. When a satisfactory painted surface can be produced otherwise, a number of these ingredients should be eliminated altogether from the material used for spraying. All

paints containing lead, benzol, turpentine and free silica for use in spray painting, should be labelled in such manner as clearly to indicate the percentage of each such substance in the container. Whether other ingredients now used, or other compounds which may in the future be so used, should be included in the foregoing list can only be determined after careful investigations have been made as to the possibility of their constituting more or less serious health hazards in spray painting.

(2) The spray booth and its equipment should be such as to provide the maximum safety possible for the spray operator. The exhaust fan should provide a sufficient current of air, varying according to the size of the booth, but adequate to exhaust the fumes.

To prevent the exit of the fumes or air charged with the ingredients of the sprayed material other than through or by the exhaust fan, the air entering the room in which the booth is located should not exceed the supply of air removed from the booth by the exhaust. The face of the booth should be provided with doors capable of being adjusted to reduce the open face of the booth according to the size of the object to be sprayed.

Where spray painting is done within buildings, it should be carried on only in a part of the building set aside exclusively for such work. Objects freshly sprayed should be immediately removed for drying to special apartments not used for other purposes, and proper equipment for exhausting the fumes from such apartments should be provided.

(3) The air pressure used in the spray machine should be as low as will provide a satisfactory painted surface. The nozzle of the spray machine should be held at least one foot distant from the object sprayed, in order to avoid unnecessary rebound (beat back) of the spray.

(4) The operator should, and, when he is engaged in interior spray painting, must, wear a mask into which uncontaminated air under pressure is supplied.

(5) No one should be engaged as an operator who is under 20 years of age, and before beginning employment as such, should undergo a medical examination to determine whether he is in proper condition to serve as an operator. Thereafter, where possible every three months he should be examined medically to determine whether he has been affected in any way by the material used in spraying, and if found affected, should only continue as operator on medical advice and under medical supervision. No women should be employed in spray painting during pregnancy.

(6) Provision should be made requiring spray operators personally to observe regulations intended to minimize the health hazard.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

International Conference on Silicosis

An International Conference on Silicosis, organized and financed jointly by the Transvaal Chamber of Mines and the International Labour Office, was held at Johannesburg, South Africa, during the latter part of August, specialists being in attendance from South Africa, Australia, Canada, Germany, Great Britain, Italy, the Netherlands, and the United States. The agenda included consideration of the following subjects:—(1) The medical aspects of silicosis; pathology and clinical phenomena of the disease; (2) preventive measures; and (3) compensation.

Canada was represented at the conference by Dr. J. G. Cunningham, director of the Industrial Hygiene Branch of the Ontario Department of Health.

Mr. Phelan, chief of the Diplomatic Division of the International Labour Office, who presided, drew attention to the fact that this was the first conference convened outside Europe by a body belonging to the League of Nations.

Mr. Sampson, Union Minister of Posts and Telegraphs, in welcoming the delegates, said the prominence of silicosis in South Africa was due to the unique geographical concentration of the great gold-bearing reef of the Witwatersrand and to the extraordinarily rapid development of the mining industry based upon it. The fact that the industry bore a burden of nearly £1,000,000 a year, totalling some £15,000,000 since 1911, gave some idea of the suffering to the victims and the loss to industry.

Silicosis, a lung disease attributed to the inhaling of flinty or siliceous particles, is found among workers employed in mining, stone-working, pottery-making, the grinding of metals, and other occupations which entail the evolution of dust into the air. In its later stages, particularly when it develops into what is termed miners' phthisis, it is incurable and deadly. The ravages of this disease among the mining population of South Africa, both white and black, have long been a cause of

grave anxiety in that country, and much has been done by legislation, by research, and by a system of compensation to reduce its incidence and mitigate its hardships. In other countries, also, the disease takes a heavy toll, and has been in varying degrees a subject of investigation and of preventive measures. South Africa, however, thanks to the work of the Miners' Phthisis Bureau established by the Government, and to a long and intensive study of this disease in connection with the gold mines, now possesses an enormous mass of material bearing on it, and has had a unique experience of dealing with it.

A little less than three years ago, during a visit of the Deputy Director of the International Labour Office to that country, the suggestion was made that the Office might usefully convene an international meeting of experts, to be held in Johannesburg, in order to discuss the pathology and prevention of silicosis. Later, the Transvaal Chamber of Mines made a very generous offer to bear the major part of the cost of such a conference. The Governing Body of the International Labour Office welcomed this action, and subsequently included in the budget of the organization for this year a sum to cover the share of the cost to be borne by the Office.

Safety Work in Ontario Lumber Industry

Mr. W. H. Cox, of the Industrial Accident Prevention Association (lumber industry) of Ontario, in an article in the *Canada Lumberman,* August 15, states that an important feature of accident prevention work has been the organization of three districts in the province with an inspector in charge of each. These Divisions are known as the Essex-Kent Division, with an office in Windsor; Wentworth Division, with an office in Hamilton and a new Division at Kitchener. The purpose of these divisions is to carry on a more intensive accident prevention campaign in the form of more frequent plant visits; meetings for employees; executive and class group meetings; accident records are compiled and submitted to employers monthly. This tends to create interest in "no accident" records. For instance, in the Essex-Kent Division, out of 154 firms reporting on the monthly statistical record, 81 firms went through the first 5 months of 1930 with a "no accident" record.

The Essex-Kent Division elect their own officers to preside over the work of the division and regular monthly dinner meetings of plant representatives of all classes are held throughout the year. At these meetings, the accident experience of the division is discussed and suggestions are advanced to prevent similar accidents occurring, and activities planned to carry on the most effective accident prevention campaign possible. Class executive meetings are being planned quarterly in order that each class may discuss its own particular problems. Every member is working for the best interests of the Association with a hope of producing the best results in the safety movement.

Cost of Accidents

In the same paper Mr. Cox asserts that it has been rightly estimated that the cost of accidents is based on a 4 to 1 ratio; "that is to say, take the cost of accidents as awarded by our Workmen's Compensation Board and multiply it by 4, and you have a truer estimate of the total cost. We lose sight of the fact that it is not only the victim of the accident who suffers and we often forget: (1) That the dependants suffer due to loss (temporarily or permanently) of wages; (2) The effect on the morale of fellow employees who may have witnessed the accident by loss of time from their work, etc.; (3) Possible damage to machinery; (4) The necessity of breaking in a new operator to replace the injured employee, and many phases that tend to disrupt the entire organization."

Industrial Hygiene in Ontario

The fifth annual report of the Department of Health of Ontario contains an account of the work carried on during 1929 by the industrial Hygiene Division. Dr. J. Grant Cunningham, the director of the Division, reports as follows:—

"The toll exacted by industrial accidents and problems arising out of the cost of sickness are drawing attention more and more in the direction of what can be done to minimize the burdens of physical disability. The Government, in maintaining facilities for advising industry in the control of ill-health, is striking at the root of the matter. Industrial health problems are being referred to the Division to an increasing extent by employers and by employee groups. Both the Workmen's Compensation Board and the Factory Inspection Branch of the Labour Department are using the facilities available here for clinical and plant investigations. Many physicians, carrying responsibility for the health of workmen exposed to poisonous substances, are submitting specimens for clinical, laboratory and chemical analysis.

"In the past year, there have been 330 examinations of workmen, most of whom presented some occupational disease, mainly lead poisoning or silicosis. These are the two most important occupational diseases. A few cases of poisoning from chrome, benzol, and arsenic have also been examined. Blood smears numbering 350 have been examined from workmen exposed to lead poisoning—service to physicians who have suspected cases of lead poisoning. Ninety special chemical determinations have been made for evidence of exposure to poisons, the results used in the diagnosis of cases or the study of plant conditions—both with the view to minimizing existing hazards. One hundred and sixteen examinations were made in co-operation with the Tuberculosis Division, which has reciprocated in the Division's various silicosis enquiries.

"An additional group of thirty-five experienced granite-cutters, thirty-three workers exposed to arsenic, sixty workers exposed to artificial abrasives and a few compositor apprentices, have been given examination, and the results used to study the effects of substances used, and give protection to workmen. These examinations have entailed numerous plant visits in addition to visits made for the examination of conditions of work where physical examinations were unnecessary.

"The supervision of workers exposed to arsenic was continued from last year. Determinations of arsenic in excretions of workmen made possible by the establishment of facilities by the plant manager were continued until November. These determinations present some interesting considerations which are less valuable on acount of the difficulties experienced in controlling the conditions in industry respecting the degree of exposure and the labour turnover among workmen employed.

"Detailed examination and report has been made on the literature dealing with the toxicity, methods of collection and estimation, recommendations for control, and existi legislation regarding substances comm used in spray painting.

"During the year, chromium and its compounds as a source of poisoning has been added to the list of compensable diseases in the Workmen's Compensation Act.

"Short statements have been prepared on lead poisoning and requests for this literature have been frequent.

The report states that the mask designed for the protection of workmen against fumes and dusts is now in use in 40 plants.

Preventive measures against disease

At the 17th annual conference of the National Association of Trade Union Approved Societies (under the National Health Insurance System of Great Britain) the President, Mr. J. W. Lowe, laid stress on the need of more active measures to prevent sickness, in addition to the remedial work now carried on under the provisions of the Act. The slums and unhealthy working conditions which created sickness he said, still persisted after the eighteen years during which the National Insurance Act had been in operation. It appeared hopeless to effect the cure of an invalid worker and then send him back among the condition which had created his disease. In this connection, Mr. Lowe referred to the expenditure of £300,000 on a sanatorium at Manchester, where he said, "most of the patients will come from the slums, and then, if they survive, go back to the slums and become applicants for sanatorium treatment again—a vicious circle." He recommended that specialist treatment should be provided for the home as well as in the hospital. Tuberculosis, in his opinion stated, was largely a disease created by occupation and mode of living, and there was no doubt that social and working conditions provided a good breeding ground for the disease. He referred also to the "appalling effects" of rheumatism, and to the "nightmare" of cancer.

Importance of Industrial Lighting

"Occupation and Health," the encyclopaedia of hygiene, pathology and social welfare now in course of publication by the International Labour Office at Geneva, contains an exhaustive chapter on "Industrial Lighting." An introduction to the article states that "the importance of suitable lighting in industry is obvious. But employers and technicians should not be obliged to grope about to find the standard of lighting suitable for their works, and at the same time the indefiniteness which still characterises certain regulations sh d be remedied.

Suitable lighting leads to cleanliness of workplaces, postponement of fatigue, prevention of accidents, easier discipline and control, limitation of waste, and better quality of work with more rapid production.

"The use of electricity has for some years increasingly favoured the daily use of artificial lighting, with a tendency to use a very much higher standard of illumination than that recommended by hygienists in the past. This is easily understood, having regard to the progress made in the production of light."

Causes of Death by Occupation

The United States Bureau of Statistics recently published a Bulletin 507, a study by Messrs. Louis I. Dublin and Robert J. Vane, of the Metropolitan Life Insurance Company, entitled "Causes of Death by Occupation."

The study covers the experience of some three and a quarter million industrial policyholders from 1922-1924. Age for age, the authors point out, the death rates of industrial policyholders run from one and one-half to more than two times the rates of policyholders in the ordinary department of the same company, the latter composed largely of professional, clerical and commercial classes. At the age of 20, the industrial policyholder has a life expectancy of 42 years, that is, he may expect to reach age 62; the non-industrial worker engaged in non-hazardous occupations may expect to attain 69, or seven additional years. Death rates from tuberculosis are from two and one-half to four times higher in the industrial group than in the non-industrial; age for age, the hazard of accident and pneumonia is twice as great; the degenerative diseases, such as cerebral hemorrhage, nephritis, and organic heart diseases, two or three times more deadly. There has been a gratifying improvement in mortality rates for this industrial group during the past twenty years, but the relatively high rates which still obtain point the way to further needed reforms. The authors believe that while heredity and innate differences are responsible for part of the differences, "probably the most important factors are the conditions incidental to industrial employment, including deleterious dusts, excessive fatigue, bad posture, crowded workrooms, dampness, extreme changes of temperature, and sometimes specific occupational poisoning." They point out that it is significant that within the industrial group itself, the death rates of men are far higher than those of wives and sisters in the same economic class except at ages 15 to 24, when the proportion of women in industrial occupations is at its height. "After this age the large majority of these women become housewives, and we notice a much lower rate of mortality for them in each succeeding age period than for men. This, we think, is largely traceable to the absence of industrial hazard in the lives of most women."

Sickness Among Industrial Employees in United States

In a report recently published the United States Public Health Service points out that an influenza epidemic was in progress during the final month of 1928, affecting adversely the rate of sickness in the fourth quarter of that year. For this reason the disability rate for the last three months of 1929 among a group of about 110,000 industrial employees makes a favourable comparison with the rate for the corresponding period of the preceding year. The frequency of disability from sickness lasting more than one week was 27 per cent lower in the fourth quarter of 1929 than in the same quarter of 1928. The respiratory group of diseases shows the greatest decrease, the rate was little more than one-half that experienced in the last three months of 1928. Influenza and grippe decreased 64 per cent and pneumonia 26 per cent from the incidence experienced during the fourth quarter of 1928. In the last three months of 1929, however, bronchitis and diseases of the pharynx and tonsils increased 13 and 9 per cent, respectively, but the incidence of tuberculosis declined 20 per cent, and the rate for respiratory diseases other than those mentioned above dropped 5 per cent from the rate of the fourth quarter of 1928.

It is quite possible that the recorded sickness presented above understates to some extent the real magnitude of the incidence rate of cases causing disability for more than one week, because a number of the reporting associations do not pay sick benefits for disability on account of the venereal diseases, for illness resulting from the violation of any civil law, for the results of willful or gross negligence, and for certain other causes; and some associations do not pay for chronic diseases contracted prior to the date of joining the organization, for disabilities caused by or growing out of specific physical defects, or for illnesses not reported within specified time limits. Of more importance, perhaps, is the fact that the reports come from the larger companies having well-organized employment and medical departments which make a physical examination of applicants, so that a somewhat favourably selected group from a health standpoint may result. Workers in poor health who doubt their ability to pass the physical examinations may tend to drift to the smaller industrial establishments where the physical condition of the applicant is usually given less consideration. As offsetting factors a few cases of malingering may be included in the records and the associations with the most liberal sick-benefit provisions may attract persons when their health begins to fail. On the whole, it seems that the statistics presented may tend more toward understatement than overstatement of the average frequency of disability which lasts longer than one week among industrial employees.

Slum Clearance in Great Britain

The Housing Act, 1930, and the Housing (Scotland) Act 1930, passed by the British Parliament at its recent session, received the Royal Assent on August 1. The former, except for two sections which respectively amend Section 5 and modify temporarily Section 3 of the Housing (Financial Provisions) Act, 1924, applies to England and Wales only.

Part I of the Housing Act, 1930, deals with the clearance or improvement of unhealthy areas. Two classes of unhealthy areas are distinguished; "clearance areas, i.e., areas to be cleared of all buildings"; and improvement areas", where the conditions can be effectively remedied, without demolition of all the buildings, by the demolition or repair of some of the buildings, the opening up of the area, and the abatement of overcrowding.

The Act makes a radical alteration in the basis of Exchequer assistance towards the cost of dealing with unhealthy areas. Under the previously existing laws grants were made to a local authority towards the cost of a clearance scheme not exceeding one-half of the estimated average annual loss likely to be incurred by the authority in carrying out the scheme. The new Act abolished this grant, except in certain cases, and replaces it by a fixed annual grant on a unit basis. The new grant will be paid in aid of the expenses incurred by the local authorities in dealing under the Act with a clearance or improvement area, and in the demolition of individual insanitary houses outside either class of unhealthy area.

The new grant will be based on the number of persons required to be displaced for whom accommodation is rendered available in new houses provided by local authority, and will normally be 45 shillings per displaced person, though in certain cases it may be higher. The increased Exchequer assistance given under the Act is to be used by local authorities in letting a proportion of the houses at a definitely lower rent than that normally charged for houses let under the Housing Act of 1924.

Other provisions of the Act deal with the repair or demolition of insanitary houses, with rural housing, and with the provision for aged persons of houses of a smaller size than the minimum in respect of which Exchequer assistance can at present be given.

As stated above, the Act, with two slight exceptions, applies to England and Wales only, and there are modified provisions in certain cases for London.

The Housing (Scotland) Act is, in its main features, closely similar to the corresponding Act for England and Wales, noticed above. The principal difference is that the grant will normally be 50 shillings (in rural areas 55s.) per displaced person, instead of 45s. and 50s., respectively, as in England and Wales.

TEACHERS' RETIREMENT FUND OF MANITOBA

THE Legislature of Manitoba, at its recent session, amended the Teachers' Retirement Fund Act (Statutes of Manitoba, 1925, chapter 60). The provisions of the Act of 1925 were briefly outlined in the LABOUR GAZETTE, May, 1925, page 459. Among other changes in the Act an increase from one to two per cent of salary was made in the amount of the teacher's contribution to the Fund. The Board of Administrators, a body of four members, two of whom are appointed by the Government, and two elected by the teachers themselves, recently passed a bylaw setting forth the procedure to be followed by teachers in applying for pensions, and stating the amounts of the benefits payable out of the Pension Fund. The bylaw is in part as follows:—

"4. On and after July 1, 1930, a pension payable monthly may at the discretion of the Board, be granted to any teacher who applies to the Board for a pension under the act and (*a*) Who having retired from the profession of teaching furnishes to the Board evidence satisfactory to it that he has served as a teacher in the public schools of Manitoba for at least forty standard years of service. (*b*) Who having retired from the profession of teaching furnishes evidence as aforesaid that he has served as a teacher in the public schools of Manitoba for at least thirty standard years of service. (*c*) Who furnishes evidence as aforesaid that he has served as a teacher in the public schools of Monitoba for at least fifteen standard years of service and that he is no longer fit to perform his duties or other suitable duties. Provided always that any teacher granted a pension under Section 4 (*c*) hereof shall, whenever required so to do by the Board, produce evidence of continued disability. In the event of such teacher being, in the opinion of the Board,

able to resume his duties in the teaching profession, or other suitable duties, the pension may be discontinued.

"5. (*a*) The annual sum payable by way of pension under 4 (*a*) and 4 (*c*) hereof shall be one-sixtieth of one half of the average salary for the last ten years of service multiplied by the years of service up to but not exceeding 40 years. If the application of this rule shall in any case produce a pension of more than $500 a year, the pension payable shall be $500 a year, and if less than $182.50 a year then the pension shall be either the result of the application of the above rule, or $10, a year for each year of service whichever is the greater, but not exceeding in the whole $182.50 a year. (*b*) The annual sum payable by way of pension under 4 (*b*) hereof shall be the percentage as hereinafter stated of what the teacher would have been entitled to under sub-section (*a*) of this section if he had completed forty standard years of service. . . . .

"7. A partial refund of contributions as follows shall be made without interest to any person who, after having contributed to the fund for five or more standard years of service, retires from service for any reason other than death and is not eligible for a pension hereunder. (*a*) If the retirement takes place on or after July 1, 1935, the refund will be one half of the amount contributed. (*b*) If the retirement takes place prior to July 1, 1935, the refund will be one half of the amount contributed prior to July 1, 1930 together with one quarter of the amount contributed after July 1, 1930.

"8. (*a*) The amount contributed to the fund by any teacher who dies while still serving as a teacher and is not in receipt of any pension hereunder will be returned without interest to such person as may have been designated in writing signed by the teacher to receive the same, if there be any, otherwise to his personal representatives. (*b*) If any pensioner dies before receiving in pension payments an amount equal to his contributions to the Fund the balance will be returned without interest as in Sub-section (*a*) of this section provided. (*c*) Pensioners shall, whenever required so to do by the Board, produce evidence that they are still living.

"9. In the case of persons granted pensions under the Fund prior to July 1, 1930, the amount of the pension payable to each such person shall be recomputed by the Board on the same basis of computation which would have been applicable to such case if this by-law had been in force at the date when such pension was granted and the pension so recomputed shall be payable as from July 1, 1930 in lieu of the pension originally granted.

"10. In computing the period of employment of any teacher applying for pension, any time spent in military, naval or aeronautic service in defence of the Empire, including service as nurse or nursing sister, shall count as service, provided that such teacher was engaged in teaching in the Public Schools of the Province prior to such enlistment and resumed teaching within one year from date of discharge."

RECENT LABOUR UNION CONVENTIONS

International Brotherhood of Bookbinders

With approximately one hundred delegates in attendance, presided over by President John B. Haggerty, the twenty-first biennial convention of the International Brotherhood of Bookbinders was held at Toronto, Ont., on July 14-19, 1930. The delegates were welcomed to the city by Alderman James Simpson, in the absence of the mayor, while Mr. James Ballantyne, Deputy Minister of Labour for Ontario and Mr. Tom Moore, President of the Trades and Labour Congress of Canada, also extended a welcome to the visiting delegates. Others to address the convention were: Mr. Daniel McDonald, special representative of the board of governors of the International Allied Printing Trades Association; Mr. William McHugh, vice-president of the International Printing Pressmen and Assistants' Union; Mr. Charles P. Howard, president of the International Typographical Union; Mr. Matthew Woll, president of the Union Labour Life Insurance Company and vice-president of the American Federation of Labour; Mr. Daniel J. Tobin, president of the International Brotherhood of Teamsters and Chauffeurs; and John P. Frey, secretary of the Metal Trades Department of the American Federation of Labour.

In the report of the executive council reference was made to requests for strike sanction, and it was shown that out of fifteen such requests, it was necessary in only a few cases to resort to drastic action. The report further showed that in order to facilitate the inauguration of an organization campaign, the International Union had granted local union No. 28, Toronto, Ont., and No. 20, Detroit, Mich.,

the sum of $75 per month for twenty and fifteen months respectively. The executive reported that local union No. 47, Columbus, Ohio, had submitted to them for approval a contract embodying the five-day work week, but owing to the unfavourable economic conditions permission to negotiate on that basis was temporarily withheld.

According to the report of the committee on returns and finances, there was a balance on hand as at April 30, 1928, of $53,634.05; receipts for the two-year period ended April 30, 1930, amounted to $388,656.22; disbursements totalled $364,736.82, leaving a balance on hand as at April 30, 1930, of $77,553.45.

The committee on text books, in its report, recommended that the international representative assigned to handle the text book question, render all possible aid to the Canadian locals, it having been brought to the attention of the committee that a large number of books were being printed in Belgium, while others were being produced in establishments operating under non-union conditions.

Mr. W. T. McDowell, on behalf of the Eastern Canada Conference, presented a report to the convention, in which was set forth a brief résumé of the conditions existing in the eastern part of the Dominion.

President William Green of the American Federation of Labour, in his address to the convention, advocated higher wages with a shorter work day and week as a remedy for unemployment.

The convention passed a resolution of condolence on the death of James M. Lynch, former president of the International Typographical Union.

Reference to the election of President Haggerty to succeed Major G. L. Berry as President of the International Allied Printing Trades Association was made by the committee on officers reports. This committee also recommended that provisions be made for an old age pension fund as soon as practicable.

Among the resolutions adopted were the following:

Recommending that in the event of the membership favouring the establishment of an old age pension system, the executive council be instructed to ascertain the cost for the maintenance of a pension fund and submit it to the membership for approval.

Instructing the executive council to present to the referendum at an early date a proposition to create a large defense fund to be used only in case of strikes and lockouts of the members.

Recommending that the president and secretary be authorized to approach the international officers of the other printing trades in connection with closer affiliation or amalgamation.

Directing the incoming executive council to devise a scheme and make representation to the employers for the purpose of creating a joint unemployment fund, said fund to be financed equally between the employers and the International Brotherhood of Bookbinders.

Recommending that in the election of officers, the president and secretary be elected by the membership at large, and that there be created four zones, three in the United States, being as nearly equal in membership as possible, the Dominion of Canada forming the fourth, and that for each zone a male and female member be elected, provided that the two members in any of the three zones in the United States do not come from the same city, and further that the proposal be presented to referendum vote.

Memphis, Tenn., was selected as the convention city for 1932.

International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Labourers

The nineteenth triennial convention of the International Brotherhood of Firemen, Oilers, Helpers, Roundhouse and Railway Shop Labourers was held at Montreal on July 14-18, approximately one hundred delegates attending. Alderman Seigler, in the absence of the mayor, greeted the convention and welcomed the delegates to Montreal, while Mr. P. Draper extended a welcome on behalf of the Trades and Labour Congress of Canada. Others to address the convention were: Mr. Charles Dickie, secretary-treasurer, Division No. 4, Railway Employees' Department; Mr. Matthew Woll, vice-president of the American Federation of Labour and president of the Union Labour Life Insurance Company; and William Green, president of the American Federation of Labour. In the course of his address, President Green spoke of the unemployment situation and referred to the plan recommended by the Federation to Congress, for its relief. He also stated that the Federation was working and urging legislative matters favourable to labour, among which was a bill to limit the use of injunctions.

The recommendation of the committee on insurance, that the question of group insurance be submitted to a referendum of the members, the vote to be counted in the in-

ternational office on or before January 1, 1931, and to represent not less than 65 per cent of the membership, was adopted by the convention.

The committee on executive board report commended the officers for their action in securing the release from the Maintenance of Way Organization of railway shop labour.

Among the resolutions adopted were the following:

Authorizing and instructing incoming officers to endeavour to have an unemployment insurance bill placed before Congress and the Parliament of Canada, whereby unemployed workers would be paid by the Federal Governments an appropriate sum collected from industries by a system similar to state compensation for injuries;

Asking the enactment of legislation providing for the protection and financial reimbursement of losses to railroad employees through the consolidation of railroad properties;

Demanding the unconditional pardon of Tom Mooney by the Governor of California;

Urging that every effort be made to establish a six-day work-week without a reduction in wages;

Instructing the officers of each local union in the United States to urge their respective Congressman and Senator to support the legislative program of the American Federation of Labour to abolish the alleged abuses of the use of the writ of injunction.

Chief officers elected were: president, John F. McNamara, Boston, Mass.; secretary-treasurer, Joseph W. Morton, 2922 W. Washington Boulevard, Chicago, Ill. Mr. James Gascoyne, Montreal, Que., was elected fourth vice-president.

Boston was selected as the convention city for 1933.

Quebec Provincial Council of the United Brotherhood of Carpenters and Joiners

The twenty-first annual convention of the Quebec Provincial Council, United Brotherhood of Carpenters and Joiners, was held recently at Montreal, with approximately thirty delegates in attendance. The convention was presided over by Mr. A. Martel, the president of the council, Mr. Omer Fleury being absent on account of illness. Letters of regret for being unable to attend were received from Mr. W. L. Hutcheson, president of the United Brotherhood of Carpenters and Joiners; Mr. Tom Moore, president of the Trades and Labour Congress of Canada, and Mr. Patrick Green, organizer of the Brotherhood.

The executive committee presented a detailed report of the activities of the council during the past year. The report claimed that the United Brotherhood, with half a century of experience, was the organization best able to look after the interests of the carpenters and joiners in the province during the time they were able to work, and that the guaranteed pension would take care of them in their old age. The report of the treasurer showed that the finances of the council were in good state and indicated an increase in membership during the year.

Among the resolutions adopted were the following:

Requesting the Federal Government to restrict all immigration so long as there are any unemployed in the country;

Asking for the abolition of fee-charging employment bureaux;

Supporting the Trades and Labour Congress of Canada in requesting legislation for the payment of fair wages to workers employed on public enterprises;

Requesting the 8-hour day in the whole of Canada;

Petitioning the head office to procure organizers for the Province of Quebec;

Urging the Dominion Government to appoint a Fair Wages officer for the Province of Quebec;

Asking that the preference be given Canadian workers in the construction of the Beauharnois Canal;

Seeking amendments to the Act concerning industrial accidents with the view to placing insurance re same within the jurisdiction of the Industrial Accidents Commission.

Officers elected were: President, Omer Fleury, Quebec; Vice-presidents, P. L. Gonthier, Montreal; P. P. Leduc, Valleyfield; R. Lynch, Montreal; J. Menard, Ste. Anne de Bellevue; E. Lanthier, Montreal; Secretary, P. Lefevre, Montreal; Treasurer, P. Blanchandin, Montreal.

International Stereotypers and Electrotypers Union of North America

The twenty-ninth annual convention of the International Stereotypers and Electrotypers Union of North America was held at Indianapolis, Indiana, on July 21-26 with approximately one hundred delegates in attendance, President Winfield T. Keegan in the chair. After the various committees had been appointed, Vice-president J. F. Frey presented a report on old age pensions, in accordance with instructions from the last convention held in New York City. In his report the vice-president drew the attention of the dele-

gates to the fact that eleven States of the Union had adopted old age pension legislation, while the Dominion of Canada had adopted a law recognizing its obligation to share with the Provinces the responsibility of taking care of the old and needy among its citizens. The report further stated that "it is interesting to find the consensus of opinion strongly favouring a system financed and operated by the government rather than by large employers or by labour unions or other groups." Mr. Frey laid special stress on the fact that the members of the International Stereotypers and Electrotypers Union could have anything they wished in the way of old age pensions, provided they paid for it.

President William Green of the American Federation of Labour, addressed the convention, drawing the attention of the delegates to the introduction of new machinery in the various fields of industry, causing technological unemployment. He also pointed out the steps that were being taken by the Federation to secure legislation to relieve, to some extent, the unemployment situation, and informed the convention that Congress was being pressed for consideration of an anti-injunction measure.

The committee on officers' reports noted that part of the president's address which showed that fifty-seven unions had through conciliation been able to either increase wages, improve working conditions or lessen hours; only in one case had arbitration been resorted to, and this resulted in an increase in wages. The report further showed that there were no strikes or lockouts during the past year, one charter had been issued and the membership had increased.

The technical education committee in its report strongly recommended that every local union should organize a technical education committee for the purpose of educating its apprentices in the technique of the trades under the union's jurisdiction.

Among the resolutions adopted were the following:

Recommending that the President's salary be increased to $5,000 per annum;

Instructing the international executive board to give consideration to the subject of organizing regional educational committees, working under the direction of the International technical education committee;

Directing the international executive board to inaugurate a campaign to have all local unions use the union label on the product of their members;

Recommending that the question of group insurance for a policy of $500 be submitted to referendum;

Urging the local unions to make a survey of trade conditions with a view of curbing the flow of man-power into the industry.

International Union of Mine, Mill and Smelter Workers

The twenty-seventh convention of the International Union of Mine, Mill and Smelter Workers was held at Salt Lake City, Utah, August 4-9, with approximately twenty-five delegates present. In President Rankin's address the following subjects were dealt with: Immigration; convict labour; "yellow dog" contracts; injunctions in labour disputes; workmen's compensation laws; unemployment, and organization. In speaking of organization, the president informed the delegates that marked progress was being made in the southern part of the United States. He also stated that progress was being made in Canada, a new local having been formed at Cold Lake, Manitoba, in which district between four and five thousand men were employed. The secretary-treasurer in speaking of the new local established in Northern Manitoba, stated that it gave promise of a large membership in future and that there was good prospects of organizing other unions in this locality.

Among the resolutions adopted were the following:

Favouring the restriction of immigration of Mexicans;

Opposing the creation of state constabulary;

Instructing the incoming officers to use every effort to have Congress pass an anti-injunction bill acceptable to the American Federation of Labour;

Asking the United States Government to prohibit the importation of manganese ore unless same be milled by free and voluntary labour.

A resolution was submitted to the convention to move the headquarters of the Union from Salt Lake City to some point in Montana to be decided by the delegates, but the proposal was defeated.

Of the three Bills introduced into the United States Congress by Senator Wagner (LABOUR GAZETTE, March, 1930, page 257), dealing respectively with the collection of employment statistics, the advance planning of public works, and the establishment of employment exchanges, only the first became law during the recent session. This bill was considerably amended in its passage through the House of Representatives and the Senate, but ultimately passed, and was signed by the President on July 7, 1930.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Fiftieth Session of the Governing Body

The fiftieth session of the Governing Body of the International Labour Office will be held in Brussels by invitation of the Belgian Government on October 7. The agenda will include consideration of the subjects which are to engage attention at the 1932 Session of the International Labour Conference; the organization of a Preparatory Technical Conference on maritime questions; to be held prior to the special Maritime Session of the International Labour Conference in 1931; effect to be given to the decision of the International Labour Conference placing the question of hours of work in coal mines on the agenda of the 1931 Session; the study of the unemployment problem by the International Labour Office; effect to be given to the resolutions of the Fourteenth Session of the International Labour Conference; and the reports of various committees.

Performers' Rights in Connection With Broadcasts

Industrial and Labour Information, the weekly publication of the International Labour Office, contains in its issue of August 25 the following note dealing with the attention which is being given by the International Labour Office to the rights of artists and other performers in connection with the broadcasting of music, etc.:—

As every owner of a "wireless" receiving set is aware, most of the broadcasting stations are accustomed to transmit more or less regularly music performed in theatres, concert halls, dance halls, cafés, and other places outside their studios. The problem is: What rights has the individual performer, whether soloist or member of an orchestra, with regard to such a distribution of his "product" to a vast multitude of listeners who may be many miles from the hall, the town or even the country in which he performs? Is he entitled to supplementary payment? Is he entitled to any guarantee that the quality of the transmission shall not be such as to damage his reputation or that of the orchestra to which he belongs?

This problem, which is of considerable importance to a large body of wage-earners, raises a number of difficult legal questions, and has been the subject of prolonged study by various bodies. So long ago as 1925, the International Legal Wireless Committee *(Comité juridique international de T. S. F.)* recognized that the wireless broadcasting of the performance of an artistic work should not be undertaken without the consent of the interpreter. In 1928, a Congress convened by this Committee declared in favour of reasonable supplementary remuneration for artists whose performances are broadcast.

Last year, the International Confederation of Professional Workers claimed that performers have "both a moral and a pecuniary right." Later, the Advisory Committee on Professional Workers set up by the International Labour Office expressed the opinion that the problems raised by this new development could be solved only on an international basis, by the drafting of a new code of rights for performers, and suggested that the International Labour Office should make a thorough investigation into the matter. Recently, the Governing Body of the Office authorized such an inquiry.

At present, little legislation can be found bearing directly on the subject. Russia has a special Act "concerning the Freedom of the Microphone" according to which any musical, literary or dramatic work may be broadcast without the consent of the author or the performers, and without their being entitled to any fee on this account. Italy and Great Britain have laws which embody certain safeguards for performers. But for the most part the question is dealt with, if at all, by direct bargaining between the performers and the broadcasters, and there is no approach to uniformity.

The problems involved are, nevertheless, virtually identical in all countries, and, whatever may be the ultimate solution and by whatever means it may be attained, it would seem that no solution will be complete unless it is on an international scale.

A considerable decrease was noted in the number of accidents reported to The Workmen's Compensation Board of Ontario during the month of August, the number being 5,838, including 42 fatal cases. This is some 300 less than the number during July, and 2,623 less than the number during August a year ago. The accidents reported to date this year number 48,277 as compared with 58,514 for the same period last year.

During August the benefits awarded amounted to $572,022, of which $466,189 was for compensation and $105,833 for medical aid: this as compared with $590,317 awarded in benefits last August. This brings the total awards to date this year for compensation and medical aid to $4,946,835 as against $5,298,613 for the corresponding period of 1929.

PARLIAMENT IN SPECIAL SESSION DEALS WITH UNEMPLOYMENT

THE first session of the Seventeenth Parliament of Canada opened on September 8, having been specially summoned to consider "the necessity for dealing with exceptional economic conditions with the resultant unemployment."

The opening Speech from the Throne intimated that "measures will be submitted for your consideration, including amendments to the Customs Act and the Customs Tariff which it is anticipated will do much to meet the unusual conditions which now prevail."

The measures for which the Government asked the consent of Parliament were contained in two resolutions submitted by the Prime Minister, the Hon. R. B. Bennett, and the Minister of National Revenue, Hon. E. B. Ryckman, respectively, on September 10, and in certain amendments to the Customs Tariff which were announced by the Acting Minister of Finance on September 16. The two resolutions, above referred to, are as follows:—

(1) "That it is expedient to provide that a sum not exceeding twenty million dollars be appropriated and paid out of the consolidated revenue fund for the relief of unemployment in constructing, extending or improving public works and undertakings, railways, highways, etc., that will assist in providing useful and suitable work for the unemployed, all as set forth in a bill founded on this resolution."

(2) "That it is expedient to amend the Customs Act in respect to the provisions relating to the fair market value for duty of goods imported and subject to *ad valorem* duty, and goods imported, the prices of which are published or listed by the manufacturers, producers or persons acting on their behalf, the allowance of discounts, and the valuation of imports prejudicially or injuriously affecting Canadian producers."

Prime Minister Submits Plan

The Prime Minister in speaking on the first resolution, stated that for the purposes of the present session, the House was not concerned with the causes of unemployment, but with its immediate relief. The first action of the government on taking office on August 7, was to set in motion through the Labour Department machinery for ascertaining the extent of unemployment throughout Canada; the second step was to summon a meeting of the Employment Service Council of Canada, a most representative body which was constituted by Order in Council under statutory authority. Mr. Bennett explained the non-political character of the Council and read the twelve recommendations submitted by it, which are given on another page of this issue. These recommendations were definitely accepted by the government. He also read a telegram he had received from the Trades and Labour Congress of Canada, in convention at Regina, submitting the following recommendations approved by the Council in regard to unemployment:—

1. The immediate putting into effect of the recommendations adopted by the Employment Service Council of Canada at its recent meeting.
2. The limitation of the hours of labour to not more than eight per day and five days per week on all government works and contracts and all works towards which the federal government may grant and as a measure of relief carried on by provincial governments or municipalities.
3. Measures towards the establishment of a national scheme of unemployment insurance.
4. The strict enforcement and maintenance of regulations prohibiting the entry of immigrant labour into Canada.

The Prime Minister noted that the telegram not only dealt with the present problems, but also contemplated legislation to provide a final solution of the problem. The resolution submitted to the House, on the other hand, was palliative in its nature; "It is a measure," he said "to deal with an acute present problem."

"We do believe," Mr. Bennett continued, "that this resolution which I am now submitting, when enacted into a statute, combined with the measure which will be subsequently submitted to this House in furtherance of the recommendations which I have read, namely those which will prevent the importation of goods at ridiculous prices into the markets of this country, thereby throwing people into idleness and destroying their employment, and the correlative of that, namely, the importation to this country of large quantities of goods which can be made in this country if our people were subjected to fair competition and an equal opportunity with their competitors, will go far to relieve the situation. They constitute one measure; one is palliative

and the other is remedial.... I have a very sincere conviction that within the next few weeks, at least it will afford a remedy to some 25,000 or 30,000 workmen, and that it will thereby effectually provide sustenance to at least twice that number of people."

Extent of Unemployment.—The Prime Minister submitted the numbers of unemployed in each province as supplied by various municipalities, as follows:—"I find," he said, "that at present in the Province of Alberta there are 5,155 unemployed; during the winter it is contemplated that that number will reach 6,650. In British Columbia at the present time the unemployed number 7,692 and it is expected that during the winter that number will increase to 14,700. In the province of Saskatchewan the present number given is 5,276 and it is expected to rise during the winter to 8,201. In Manitoba the figure is now 6,950, with a possible 9,600 in the winter. In Ontario the figure is given as 49,367, rising to 82,214. In Quebec the present number is 41,190, as against an anticipated number of 49,290. In New Brunswick the present number is 500 and it is expected it may reach 2,850. In Nova Scotia the present number is 1,800 and it may rise to 2,350."

Mr. Bennett then reviewed the estimate submitted by the Employment Service to the recent conference and other estimates by competent observers as to the number of unemployed in Canada, the figure 200,000 being given as the approximate number of unemployed at the time of the conference, a figure "almost incredible in this country at this time."

Relief Proposed.—Turning to the expenditures proposed by the Government Mr. Bennett said:—"The $20,000,000 we propose to deal with in accordance with the terms of the resolutions of the Employment Service Council, and in this manner:

"The relief fund of $20,000,000 shall be used for such purposes and under such terms and conditions as may be approved by the governor in council.

"That was the method employed on previous occasions when the matter had to be dealt with in this parliament. It will be recalled that the sum of about $2,000,000 to be exact $1,850,000, was so utilized in 1920, and that later the government of the right hon. gentleman (Mr. Mackenzie King) made some contribution to provinces and municipalities on the basis of one-third the amount of money that they expended for certain relief works. It is not proposed that this Dominion government should in any sense deal with these problems directly. These are primarily problems of provinces and municipalities, and apart from national undertakings. But a problem local and provincial in its nature, may become a national problem, and this particular problem has become a national one. That is the position, it has become national in just the sense a great law lord once indicated in connection with a problem that was before the privy council, a problem local in its inception, but which he said had now become so general as to become national in its scope. This is a national problem. It calls for a solution by the co-operation of national with provincial and local authorities, and for that reason, as I have said, this measure is being introduced in Parliament....

"First, there are national undertakings which this country may embark upon—public undertakings, buildings, wharves, piers that might not be constructed until next summer, but a portion of which work might well be done now instead of then. There might be the extension of existing contracts in connection with public undertakings. There are public undertakings which provinces and municipalities will engage in, but which otherwise they would not engage in until perhaps a year from now. We may give them assistance, may I say by way of illustration, by defraying the interest which it might cost the communities to borrow the money now instead of two years hence when they would issue their securities in the ordinary course for the purpose of enabling them to undertake that work. There are level crossings, for instance, a fruitful source of disaster in this country, especially during the summer months. The elimination of level crossings will furnish work for a considerable number of people. We have the grade crossing fund, out of which now contributions are made to an amount not exceeding $100,000 for any one crossing and up to 40 per cent of the cost. We may implement that fund, for instance, to enable the fund that may become exhausted to be supplemented by grants from this money, and matters of that kind."

An amendment was proposed by Mr. J. S. Woodsworth as follows:—

"That wherever federal aid is granted for public works for relieving unemployment, provision should be made for the payment of wages according to the Fair Wage Act where in existence, and elsewhere a fair and reasonable wage."

This amendment was defeated on a division, the Government pointing out that, so far as Dominion government contracts were concerned, the payment of fair wages was already

provided for under existing legislation; while in regard to works carried out by any province or municipality, the conditions under which such work is performed is subject to regulations by the local authority in each case, these regulations including provision for the payment of fair wages to the workmen engaged.

Speech of Minister of Labour

Speaking in the Senate on September 10, in the debate on the Speech from the Throne, the Hon. G. D. Robertson, Minister of Labour, referred to the policy of the present government in dealing with the problem of unemployment. "The policy," he said, "involves the government's responsibility to the people, the interest of the people being placed first, and the rights of property second.

"The policy which is being pursued is based on the solemn undertaking that was entered into by the Right Hon. Sir Robert Borden and signed on June 28, 1919. On the pledge then given on behalf of Canada the attitude of the Government over which he presided was based, as is the attitude of the present Government. I would call the attention of honourable gentlemen to the fact that after the great world conflict there was formed a determination, which was emphasized at the Peace Conference by the treaty that was made, that human rights should receive internationally, a larger share of attention from public men than they had previously been given. Perhaps it is not generally known, even among our own people, but it is true that our then Prime Minister, Sir Robert Borden, played a leading part in bringing about that decision and in negotiating the terms and the wording of Part 13 of the Treaty of Peace.

"The amended text of the Labour Part of the Peace Treaty was submitted by the Canadian Prime Minister, and was unanimously adopted, and under this wording the High Contracting Parties recognized that the well-being--physical, moral and intellectual—of industrial wage-earners is of supreme international importance. They recognized that differences of climate, habits and customs, of economic principle and industrial tradition, make strict uniformity in the conditions of labour difficult of immediate attainment, but, holding as they did that labour should not be regarded merely as an article of commerce, the wording of the Peace Treaty as proposed by Sir Robert Borden and adopted in the Peace Conference, declared:

"'There are methods and principles for regulating labour conditions which all industrial communities should endeavour to apply, so far as their special circumstances will permit. Among these methods and principles, the following seem to the High Contracting Parties to be of special urgent importance.'"

The Minister quoted the text of the labour principles which are set out in the Peace Treaty, the first of which is as follows:—

"The guiding principle above enunciated, that labour should not be regarded merely as a commodity or article of commerce."

Mr. Robertson then described the efforts made by the Government to alleviate unemployment in Canada in 1919 and 1920, and proceeded to deal with the similar situation at the present time, referring to the extent of the existing distress.

"There were more men unemployed in Canada in July of this year than there were in January," he said, "and I ask you to appreciate the situation that now faces the Government. Because of unemployment last winter many people have exhausted their resources—many have also exhausted their credit—and they find themslves facing another winter without employment. Furthermore, some of the municipalities who tried to do their bit and keep their unemployed from suffering last year find their resources so depleted that they are in serious difficulties. So I ask you in all earnestness to consider most carefully and sympathetically the measures that will be introduced here in a day or two, looking to at least a temporary alleviation of distress, in the hope of ultimately finding, through further research and observation and study, a more permanent cure for this terrible calamity. I say 'calamity' because it is a calamity to the men affected. There is nothing in the world that is of such concern to the wage-earner as his job. If a man has employment he can meet his obligations to his dependents, if he has not, he soon becomes quite a different citizen. He feels that he has a grievance, and turns against society, against the Government and against industry, and before he or his dependents suffer seriously he is apt to take steps to try to remedy the situation himself. Now that a second winter is approaching, through which thousands of people in Canada may have to pass without employment, the situation must be met fairly, not only in justice to the couple of hundred thousand people who are to-day without work, but in justice to Canada, if she is to discharge her obligations and duties."

Unemployment Relief

The text of the bill, submitted to the House of Commons on September 11, entitled "An Act for the granting of Aid for the Relief of Unemployment," was as follows:—

"Whereas unemployment, which is primarily a provincial and municipal responsibility,

has become so general throughout Canada as to constitute a matter of national concern, and whereas it is desirable that assistance should be rendered by the government of Canada towards the relief of such unemployment; therefore, His Majesty, by and with the advice and consent of the Senate and House of Commons, enacts as follows:

"1. This Act may be cited as the Unemployment Relief Act, 1930.

"2. For the relief of unemployment a sum not exceeding twenty million dollars is hereby appropriated and may be paid out of the consolidated revenue fund of Canada for such purposes and under such terms and conditions as may be approved by the governor-in-council.

"3. Without restricting the generality of the terms of the next preceding section hereof, and notwithstanding the provisions of any statute, the said sum of twenty million dollars may be expended in constructing, extending or improving public works and undertakings, railways, highways, bridges, and canals, harbours and wharves; assisting in defraying the cost of distribution of products of the field, farm, forest, sea, lake, river and mine; granting aid to provinces and municipalities in any public work they may undertake for relieving unemployment and reimbursing expenditures made by provinces and municipalities in connection with unemployment, and generally in any way that will assist in providing useful and suitable work for the unemployed.

"4. A report shall be laid before Parliament within fifteen days after the opening of the next session thereof, containing a full and correct statement of the moneys expended under this Act and the purposes to which they have been applied."

A fifth clause was added to the Bill during its progress in the House, to the effect that "any portion of the said sum of twenty million dollars remaining unexpended or unappropriated for the purposes of this Act on March 31, 1931, shall thereupon lapse."

Amendments to Customs Act

The Act to amend the Customs Act repeals Section 36, 37, part of 38, and 43 of the present Customs Act, and substitutes the following:

"36. (1) Such market value shall be the fair market value of such goods in the usual and ordinary commercial acceptation of the term, and as sold in the ordinary course of trade, such value in no case to be lower than the selling price thereof to jobbers or wholesalers generally at the time and place of shipment direct to Canada.

"(2) Provided that the value for duty of new or unused goods shall in no case be less than the actual cost of production of similar goods at date of shipment direct to Canada, plus a reasonable advance for selling cost and profit, and the minister shall be the sole judge of what shall constitute a reasonable advance in the circumstances and his decision thereon shall be final."

(The old Section 36 was but one paragraph reading as follows: "Such market value shall be the fair market value of such goods in the usual and ordinary commercial acceptation of the term, and as sold in the ordinary course of trade; provided that the discount for cash for duty purposes shall not exceed 2½ per cent and shall not be allowed unless it has been actually allowed and deducted by the exporter on the invoice to the importer.")

The new Section 37 is as follows:

"37. In determining the fair market value for duty of goods imported into Canada, the prices of which are published or listed by the manufacturers or producers, or persons acting on their behalf, the Governor in Council may from time to time fix and determine a certain rate of discount which may be applied to such published or listed prices, and such published or listed prices, subject to deduction of the amount of discount according to such rate, shall be deemed and taken to be the fair market values of any such manufactures or productions respectively, as are specified in such Order in Council."

(The section repealed read as follows:

"37. If any difficulty arises in determining the fair market value for duty of goods imported into Canada, which are the manufacture or production of foreign countries or of Great Britain, such as musical instruments, sewing machines, agricultural machines or implements, medical preparations, commonly called patent medicines, and other goods, the prices of which are published by the manufacturers or producers, or persons acting on their behalf, the Governor in Council may, from time to time, fix and determine a certain rate of discount which may be applied to such published prices of any such manufactures or productions, and such published prices, subject to deduction of the amount of discount according to such rate, shall be deemed and taken to be the fair market values of any such manufactures or productions respectively as are specified in such Order in Council.")

Subsection 6 of Section 38 of the Act is repealed, and the following is substituted therefor:

"(6) In estimating the value for duty no discount or deduction shall be allowed which

is not shown and allowed on invoices covering sales for home consumption in the country of export in the usual and ordinary course of trade."

(The subsection repealed read as follows:

"6. The appraiser, or collector acting as appraiser, in estimating the value for duty may disregard trifling fluctuations in market values occurring after the purchase of the goods by the Canadian importer, and may allow a bona fide discount for cash, not exceeding two and one-half per cent, when allowed and deducted by the exporter on his invoice.")

The new Section 43 reads as follows:

"43. If at any time it appears to the satisfaction of the Governor in Council on a report from the Minister that goods of any kind are being imported into Canada, either on sale or on consignment, under such conditions as prejudicially or injuriously to affect the interests of Canadian producers or manufacturers, the Governor in Council may authorize the Minister to fix the value for duty of any class or kind of such goods, and notwithstanding any other provision of this act, the value so fixed shall be deemed to be the fair market value of such goods."

(The section repealed read as follows:

"43. If at any time it appears to the satisfaction of the Governor in Council on a report from the Minister, that natural products of a class or kind produced in Canada are being imported into Canada, either on sale or on consignment, under such conditions as prejudicially or injuriously to affect the interests of Canadian producers, the Governor in Council may, in any case or class of cases, authorize the Minister to value such goods for duty, notwithstanding any other provisions of this Act, and the value so determined shall be held to be the fair market value thereof.")

Tariff Revision

In accordance with the second of the Resolutions quoted on page 1050, the Hon. R. B. Bennett, in his capacity of Minister of Finance, in the House of Commons on September 16, announced certain new tariff schedules, the changes affecting increases in about 130 items in the customs tariff of Canada. These changes, he stated, were framed so as to stimulate employment in the major industries.

The Prime Minister intimated that the present revision of duties was one of the three measures proposed by the government for the relief of unemployment. In his opinion the estimate already made that 25,000 people would be afforded employment by these measures, was a conservative one. A general revision, he announced, would follow at the next session of Parliament.

He stated further that measures would be taken by the government to protect the consumer in the event of there being any addition in prices imposed by manufacturers by reason of the new duties. Should it be found that prices were raised, he said, the Governor in Council retained the right to reduce or remove the duty in any case. Definite and positive assurances, however, had been received from manufacturers that there would be no increase in prices. "Moreover," the Prime Minister stated, "in some instances the producers are prepared, and have given assurances as to the capacity of their plants, to utilize that capacity to its maximum, and there will be a reduction in prices by reason of that very fact."

The Prime Minister further announced it was the intention of the government to carry out on a large scale what might be described as propaganda for the use of Canadian-made goods for the Canadian people with the Department of Trade and Commerce directing this activity.

The principal tariff changes include an upward revision of duties on imported articles in the following classes:—agricultural products; iron and steel in part; textiles in part; silk; boots and shoes; advertising matter; paper; metals and minerals, including brass and copper bars; agricultural implements; and certain forms of kitchenware, heating apparatus and electrical appliances etc.

In 1928, the latest year for which figures are available, the Illinois Rehabilitation Division was proceeding in the work of rehabilitating 600 persons, 469 of whom were rendered fit for, and placed in, remunerative employment. Forty-two of the 469 persons rehabilitated were women, while 427 were men. One hundred and sixteen of the 469 were persons injured in industrial accidents. Of the 469 cases, 407 were cases of injuries to hand, arm, or leg. The rehabilitated persons were placed in a wide variety of positions; 60 became bookkeepers or office clerks, 34 became automobile mechanics, 23 became stenographers or typists, 21 became watchmen, and 16 received employment as laborers. The list embraces a total of 222 different occupations. On the average, the rehabilitated persons were enabled, by means of their new training, to earn wages higher than they had previously received.

ELEVENTH ANNUAL MEETING OF THE EMPLOYMENT SERVICE COUNCIL OF CANADA

Recommendations for the Relief of Existing Unemployment

ON August 21 and 22, 1930, there met at Ottawa the Employment Service Council of Canada. This Council, which is composed of some twenty-three members, representative of the Federal and Provincial Governments and various groups in the economic life of Canada, was instituted by Order in Council P.C. 3111 of December 23, 1918 (as amended by Order in Council P.C. 2262 of September 20, 1920). A meeting has been held each year since the inception of the Council in 1919 with the exception of the year 1925.

There were present at the 1930 meeting the following members of the Council:—

Representing the Province of British Columbia, the Hon. F. S. Tolmie, Prime Minister of British Columbia, Victoria;

Representing the Province of Alberta, Walter Smitten, Commissioner of Labour, Edmonton;

Representing the Province of Saskatchewan, T. M. Molloy, Deputy Minister of Railways, Labour and Industries, Regina;

Representing the Province of Manitoba, J. H. Evans, Deputy Minister of Agriculture, Winnipeg;

Representing the Province of Ontario, J. H. H. Ballantyne, Deputy Minister of Labour, Toronto;

Representing the Province of Quebec, Louis Guyon, Deputy Minister of Labour, Montreal;;

Representing the Province of New Brunswick, George R. Melvin, Saint John, N.B.;

Representing the Trades and Labour Congress of Canada, James Simpson, Vice-President, Toronto, Ont.; J. T. Foster, Vice-President, Montreal, Que.;

Representing the Canadian Manufacturers' Association, H. W. Macdonnell, Toronto; E. Blake Robertson (Vice-Chairman of the Council), Ottawa;

Representing the Railway Association of Canada, C. P. Riddell, Montreal, Que.

Representing the Canadian membership of the Railway Brotherhoods, S. N. Berry, Senior Vice-President of the Order of Railway Conductors, Cedar Rapids, Iowa.

Representing the Canadian Council of Agriculture, A. E. Darby, Winnipeg, Man.; Bruce McNevin, Omemee, Ont.;

Representing the Canadian Lumbermen's Association, R. L. Sargant, Ottawa;

Representing the Returned Soldiers, George Herwig, Canadian Legion of the British Empire Service League, Ottawa;

Representing the Canadian Construction Association, J. Clark Reilly, Ottawa (Chairman of the Council);

Representing the Dept. of Pensions and National Health, E. H. Scammell, Secretary, Ottawa;

Representing the Dept. of Labour, Miss Charlotte Whitton, Ottawa Executive Secretary, Canadian Council on Child and Family Welfare; Miss L. Chamberland, Department of Public Assistance, Montreal; and R. A. Rigg, Director of Employment Service, Ottawa (Secretary of the Council).

The Province of Nova Scotia did not find it possible to be represented.

Under the appointing Order in Council the Employment Service Council is an advisory body, instituted for the purpose of advising the Minister of Labour specifically in connection with the functioning of public employment offices throughout Canada and more generally on ways and means of preventing unemployment and of relieving an existent unemployment situation.

In convening the 1930 meeting of the Council the Hon. G. D. Robertson, Minister of Labour, intimated that the chief business of the sessions would be a consideration of the presently existing unemployment situation throughout the country with a view to the formulation of such suggested policies and procedures with reference to relief measures as the Council might see fit to recommend.

In view of the nature of the question to which the attention of the Council this year was chiefly directed, certain procedures had to be adopted in order to assist in the transaction of the business before the conference. In addition to the members of the Council permission was granted to all parties with a reasonable interest in the unemployment situation to be represented throughout the sessions, and these observers were given opportunity to discuss the unemployment question during the debates. Representatives of the press were present, and reports of the proceedings were carried at some length by the daily newspapers throughout Canada.

The Minister of Labour, prior to the meeting, had stressed its importance to those represented on the Council, more particularly to

the various provincial governments, and in the latter case invitations had been extended to have present at the conference a representation not restricted to the membership of that body. Invitations had been issued to the provincial Ministers in charge of highway construction to either be present or to be represented, or to supply information respecting highway construction throughout Canada, it being felt that work on highways is of considerable importance in connection with any program to relieve unemployment through the provision of relief works. In response to this invitation there were present the Hon. A. C. Stewart, Minister of Highways, Regina; the Hon. D. A. Stewart, Minister of Public Works, Campbellton, N.B.; the Hon. J. N. Francœur, Minister of Public Works and Labour, Quebec; J. L. Boulanger, Deputy Minister, Department of Roads, Quebec; and R. M. Smith, Deputy Minister, Department of Public Highways, Toronto. The attendance at the meetings was further increased by additional representatives of the provincial Employment Services, of the Dominion Bureau of Statistics, and by representatives of several labour and employers' associations availing themselves of the general invitation to be present.

At the suggestion of the Chairman, Mr. J. Clark Reilly, the regular order of business was suspended at the first session, and the sole attention of the Council was directed to the extent and scope of the present unemployment situation and to devising ways and means for its relief. The position of the Government with reference to the present unemployment situation and likewise with reference to the present sessions of the Employment Service Council were outlined by the Hon. G. D. Robertson, Minister of Labour, in welcoming those in attendance at the initial meeting.

The Minister said that the large attendance, exceeding as it did the regular membership of the Council, might be taken as indicative of the widespread interest throughout Canada in the present plight of the unemployed and the determination of the people of Canada to correct the situation in so far as might be possible. He said that the Government was particularly gratified to see that the provincial governments were so adequately represented at a conference to draft suggested schemes to relieve unemployment. Unemployment had not heretofore been so prominent in the public eye, but now the public seemed genuinely desirous of alleviating the situation. The Council itself had been helpful to successive Ministers of Labour for some twelve years, and he felt sure that its advice this year would be no exception to the rule.

The first urgent concern of the moment, said Senator Robertson, was unemployment rather than employment, inasmuch as the problem had to be attacked from a negative viewpoint to determine its extent. As a corrective the Government proposed to help people to help themselves, rather than making extended use of the hand of paternalism. The Department of Labour had then just recently undertaken a survey to determine the numbers in Canada unemployed, and for this purpose inquiry had been made of provincial governments and mayors of municipalities with 10,000 and more population in order to secure estimates as to the numbers thought to be unemployed in the respective jurisdictions. Based on the returns he would estimate that some 200,000 workers were out of employment—at any rate this figure seemed sufficiently conservative to serve as a reasonable basis for the Council in its deliberations. The complexion of the problem of unemployment was changing from time to time. One noticeable effect of this was the fact that unemployment to-day does not confine itself to the large urban centres, but is even noticeable in rural districts, particularly in Western Canada. Then again under-employment, that is, working on short time, is an increasing factor in times of stress, and this too is a serious situation for thousands of wage earners. The Minister expressed the view that, contrary to the opinion some held, it is desirable to bring home to the public the very real existence of unemployment in a time of emergency in order that steps may be taken to apply remedies. At the forthcoming session of Parliament the Government proposed to meet the unemployment situation fairly and squarely, through co-operation with municipalities and provinces as well as private employers, to the end that every person willing and able to work might get employments. In any case the Federal Government was prepared to adopt the policy whereby no person need starve or go cold, and he asked the co-operation of the Council in devising such ways and means.

In following the Minister of Labour the Chairman, Mr. Reilly, urged the view that not long since unemployment had been held by many to be inevitable. To-day the public was less satisfied to accept this dictum, and there was an insistent demand that steps be taken to obviate its occurrence or to ease the situation if it did actually occur.

The Council then set to work on the business before it, and each member expressed his views on the causes of the present trade depression with the consequent unemployment and distress, as well as of the measures that might be adopted to better the situation.

Each provincial representative reported on conditions in his own province, indicating the effects and incidence of unemployment there. Causes of the present trade depression and consequent unemployment, cited during the course of the discussions which ensued, were, world trade conditions; the introduction of machinery into Canadian industry; the competition of goods produced in foreign countries in the Canadian market; the adverse situation for Canada in connection with the world wheat market; and so forth. The reports and the discussions, together with addresses delivered to the Council by representatives of bodies other than those regularly provided with delegates to the Council meetings, occupied the morning and afternoon sessions of August 21 and the morning session of August 22.

At the afternoon session of August 22 the Council unanimously adopted resolutions which embodied its views on emergency steps that might be taken with respect to existing unemployment looking to some relief of the situation. These resolutions are as follows:

Recommendations

(1) That as a means of immediate relief of unemployment Federal, Provincial and Municipal authorities in their respective spheres should commence or continue works of a permanent nature, such as building and construction, including highways, bridges, wharves, railway terminals, subways, railway crossings, needed public buildings, and other public improvements as well as repairs to and maintenance of public highways and properties.

(2) That in view of the situation now existing there is a joint responsibility on the part of the Municipal, Federal and Provincial authorities to contribute to the cost of relief work measures to alleviate the unemployment situation.

(3) That the Federal, Provincial and Municipal authorities should use their influence with private corporations and individuals to carry on contemplated construction and maintenance works forthwith to alleviate unemployment.

(4) That all governing bodies, so far as practicable should anticipate their requirements and place advance orders for all lines of supplies and equipment, such as wearing apparel, tents, blankets, etc., same to be of Canadian production.

(5) That in so far as possible, in such works as may be developed to meet the present situation, preference in placement should be given to men with family responsibilities, in close proximity to the communities wherein their families are located.

(6) That when employers of labour are compelled to resort to part-time operations the available work should be distributed equitably among the whole number of workers normally employed, either by shortening hours or rotating working shifts.

(7) That in cases where direct relief must be given it is recommended that the following principles be observed:

(1) Costs should be evenly divided between the Municipality, Province and Dominion

(2) In cases of unorganized districts and municipalities, which satisfy the Province that they are unable to meet their share, then the cost shall be borne equally by the Provincial and the Dominion governments.

(3) Where, due to special conditions prevailing, responsibility for a large volume of actual relief funds must be undertaken by a private charitable agency these same public authorities shall take recognition of the fact in the distribution of any or such monies as may be assigned for actual expenditure on emergency relief.

(8) That this Council recommends the passage by Parliament at the forthcoming Special Session of adequate appropriations to provide for the relief of unemployment by the methods recommended and for such other contingencies as may arise in connection with providing work or relief.

(9) That an immediate survey of imports should be made, followed by such legislative changes as will result in the production by Canadian labour of such commodities heretofore imported, as the survey discloses can be efficiently and economically produced within the Dominion and that coincident therewith the Government take steps to safeguard the interests of the consumers.

(10) That the Federal Government give all possible encouragement to the efficient marketing of Canadian grain, farm produce and other primary products.

(11) The Council takes recognition of the decision of the government to restrict the entry of immigrants into the country at the present time and would urge that this policy should be continued until it is shown to the satisfaction of the government that such immigrants can be absorbed and given employment without detriment to the Canadian people.

(12) That this Council urge upon the Federal authorities that provision be made for an adequate census of the unemployed in Canada in connection with the 1931 census.

Subsequent to the adoption of these resolutions the Minister of Labour, while reserving his opinion as to the merits of each individual item, commended the Council for the manner in which it had dealt with the problem. It occurred to him, he said, that in the time at its disposal the Council had given quite comprehensive study to the situation, and the ways and means now proposed certainly merited the most serious consideration of the Government. In a general way he might add that the steps suggested seemed rather satisfactory.

The Council then adjourned, to meet again at the call of the Minister of Labour.

On August 29 the Executive officers of the Council duly presented the foregoing recommendations to the Hon. Mr. Robertson as Minister of Labour, for consideration by himself and his Cabinet colleagues.

Unemployment Conference in Nova Scotia

A conference to consider the unemployment situation in Cape Breton, with particular reference to the coal mining industry, met at Sydney, Nova Scotia, on September 9, at the call of the Hon. G. S. Harrington, provincial premier. The conference was attended by the premier the mayors of various towns in the district, and by officials of the Dominion Steel and Coal Corporation and of District 26, United Mine Workers of America. Suggestions made by Premier Harrington for new work on provincial highways were adopted, and a resolution was passed requesting the various departments of the provincial government to begin immediately public works that would not ordinarily be started for some time. Messages with reference to the situation were sent to the Dominion Prime Minister and to the Dominion Ministers of Public Works and of Railways and Canals; also to the provincial Minister of Highways, and the general manager of the Dominion Steel and Coal Corporation.

Western Unemployment Conference

Representatives of the governments of Saskatchewan, Alberta and British Columbia held a conference in the Parliament Buildings at Edmonton, Alberta, on July 17-18, for the purpose of considering measures to relieve unemployment in those provinces during the approaching winter. The meeting was attended by the following ministers and deputy ministers:—Hon. J. E. Merkley, Minister of Labour and Mr. T. Malloy, Deputy Minister of Labour, Saskatchewan; Hon. W. A. McKenzie, Minister of Labour, and Mr. J. A. McVeety, Deputy Minister of Labour, British Columbia; Hon. J. E. Brownlee, Premier; Hon. R. G. Reid, Provincial Treasurer and Minister of Municipal Affairs, and Mr. Walter Smitten, Commissioner of Labour, Alberta.

The following statement as to the proceedings at the meeting was subsequently issued by the Hon. Mr. Reid, who presided:—

"The greater part of the time of the conference was spent in an exchange of opinions between the representatives of the provinces with respect to the probable extent of unemployment during the coming fall and winter, but more particularly as to the experience of the various governments in methods adopted in previous years in meeting the situation.

"The experience of Alberta last year in the unemployment camps established for brushing and clearing was discussed at length, as was also the question of other possible forms of work that might be undertaken, having regard to our climatic conditions in western Canada.

"It was the feeling of the meeting that as far as possible any measures undertaken should be in the nature of employment rather than by the issuing of direct relief. It was also felt that the cost of any relief measures of this kind should be shared by the federal government.

"The meeting was largely taken up with a discussion of ways and means and an exchange of experience, and the result will be of great assistance, so far as the provinces are concerned, in preparing for the larger interprovincial conference to be held in the month of August."

Plan of General Electric Company to Stabilize Employment

The General Electric Company of the United States, in addition to the unemployment insurance plan which was outlined in the Labour Gazette, July, 1930, page 740, has adopted the following plan for stabilizing employment:—

When business is increasing—

(1) Increase the working force by adding employees as slowly as possible; (2) Increase the number in especially busy departments by transfers from departments; (3) Resort to overtime in particular departments and generally before increasing the working force; (4) Postpone plant renewal and maintenance work as much as possible, employing the men on regular production.

When work begins to fall off—

(1) Cease hiring at once; (2) Cut out all possible overtime and bring departments down to the normal week; (3) Transfer people from slack to busier departments; (4) Stimulate the sales department to secure co-operation from customers and get business for future delivery; (5) Build standard apparatus for stock up to—months' shipments, based on average of last three years' sales, adjusted to expectation of next two years; (6) See that stocks at all factory and district warehouses are brought up to the maximum; (7) Use men on maintenance and repair work, bringing the plant and equipment up to a high standard; (8) Cut the normal week as generally and gradually as possible, by departments (down to 50 per cent of the normal week); (9) Proceed with construction of increased plant facilities previously planned, using our own men as far as possible; (10) Drop new employees with less than one year of service —single people with no dependents and who are most easily spared first—always with not less than one week's notice; (11) In accordance with our customs established for some time, employees should be told whether it is a temporary lay-off due to lack of work, or permanent lay-off and in every instance of permanent lay-off the usual compensation, if any, should be paid, depending upon character of work, age, and length of service.

The Automobile Industry in Canada, 1929

Statistics of the automobile industry of Canada in 1929, showing the production, capital invested, labour employed and other particulars, were recently issued by the Dominion Bureau of Statistics. Production in the automobile industry in Canada during 129 reached a new high record value at $177,315,593 as compared with $162,867,495 in 1928 and $128,700,514 in 1927. These totals for the industry include the factory value of cars and parts produced in the auto plants during the year and also the amounts received for custom work and repairs made at the factories.

Automobile production alone also attained a new high record at 262,625 cars having a sales value, f.o.b. plant, of $163,497,675. This output was almost 9 per cent greater in number and 10 per cent higher in value than in 1928, the next best year when the 242,054 cars manufactured were valued at $149,176,999. Export shipments (including re-exports) also showed a substantial increase during the year advancing sharply to 102,382 cars worth $45,169,591 from 79,855 cars valued at $34,400,967 in the previous year; exports of automobile parts were valued at $3,677,739, as compared with $3,416,978 for 1928. Importations declined slightly in 1929 when 44,724 cars valued at $39,423,134 and parts worth $44,772,091 were brought into Canada as compared with 47,408 cars valued at $40,832,876 and parts worth $48,839,955 in 1928.

Twelve companies in Canada manufactured motor cars during 1929 and 17 separate factories were in operation. Eleven establishments were in Ontario, 2 in Quebec, 1 in Manitoba, 1 in Saskatchewan and 2 in British Columbia. The total yearly capacity was estimated at 334,611 automobiles and 65,579 trucks.

Capital employed in the industry in 1929 was given at $98,378,301; of this total, $51,108,033 represented the value of lands, buildings, fixtures and machinery.

The average number of employees in 1929 was 16,435 as compared with 16,749 in 1928. The 2,290 salaried employees were paid $5,227,608 during the year and 14,145 wage-earners received $21,637,200. The number of wage-earners on the payrolls each month varied from 20,151 in April to 9,209 in November, the average being 14,145.

Materials used in the automobile industry in 1929 cost $120,329,612 at the works; this was the net cost after deducting the duty drawback on imported parts. The value added by manufacturing was $56,985,981.

INDUSTRIAL CONDITIONS IN THE SOVIET UNION

THE Sixteenth Congress of the Communist party, which was held in Moscow from June 26 to July 13, discussed a number of reports bearing on questions of industrial production and trade unionism in Russia. The proceedings are discussed in *Industrial and Labour Information* the weekly publication of the International Labour Office, Geneva, in its issue of August 18, which summarizes the various reports as follows:—

Some two years ago, it will be remembered, the Russian Government drew up a plan for the forced "industrialisation" of the country, with the dual object of restoring its economic position and abolishing such remnants of the capitalist system as still existed. The plan was designed to cover a period of five years, from the financial year 1928-1929 to the financial year 1932-1933, inclusive. Some thousands of millions of roubles were to be invested by the Government in State industry, for the renewal of plant, erection of new works, and general improvement of the means of production. Year by year, total production was to be increased, individual output was to be raised, wages were to increase, and costs of production were to fall, each by a fixed percentage, so that at the end of the period of five years production would be at least 100 per cent higher and real wages at least 50 per cent higher than at the beginning. By this development of State industry, coupled with a "collectivist" agrarian policy, Russia was to make a big advance towards the complete Socialist system.

In operation, the plan met with a number of difficulties, including a certain lack of discipline among the workers and some indifference on the part of trade unions. Various expedients were adopted to overcome these obstacles: provision was made for disciplinary penalties for waste of time and material; the authority of the managers of undertakings was strengthened; "shock brigades" of ardent Communists were formed to set an example of intense and conscientious labour and to stimulate "socialist rivalry" between undertakings; trade union and other officials suspected of lukewarmness and "opportunism" were relieved of their posts. By these and other means, vigorous efforts were made to remove hindrances to the execution of the plan.

From the reports submitted to the Communist Congress, it would appear that in certain branches of industry, so far as volume of production is concerned, the results have surpassed expectation; indeed, in some branches the five-year plan will have been carried out in this respect in three years. On the other hand, it is complained that quality is apt to be subordinated to quantity, and that the proportion of defective and wasted products is grossly excessive. Further, the cost of production, which was described some time ago by the head of the Supreme Economic Council as "decisive from the point of view of the fate of our national economic life", has not fallen to the extent anticipated. The remedy, it is suggested, must be found in rationalisation of plant and processes, intensified individual output, and a more economical use of materials and machinery.

In short, according to these reports, the plan is progressing, though its progress is more rapid in some directions than in others, and it continues to be in the forefront of the program of those who aspire to build up in Russia the perfect Socialist State.

Unemployment

Industrial and Labour Information, in its issue of August 11, published an account, based on Russian official sources, of conditions as to unemployment in the Soviet Union. The following paragraphs are taken from this study.

For the first time in recent years a considerable reduction in the number of persons unemployed has taken place in the Soviet Union. The number of persons unemployed in March, 1930, was 34·3 per cent less than in March 1929. The corresponding reduction for the first quarter of the current year is 29·1 per cent. According to the most recent information derived from the Soviet press there were on June 1, 1930, about 900,000 persons unemployed, which shows a reduction of 40 per cent since the same date last year.

The principal cause of the reduction of unemployment is to be found in the increasing demand for labour in the national economic system, arising mainly out of the acceleration of the development of industry and the execution of building programs on a large scale. The total number of paid workers, according to provisional figures, rose from 10,990,000 in 1927-28 to 13,129,000 in 1929-30; during the same period the number of workers employed in large-scale State industry increased from 2,632,000 to 3,029,000. It would appear, however, that the reduction of unemployment is not entirely due to this increase in the number of workers in paid employment. Information published in the Soviet press indicates that as

a result of the conversion of peasant farms into collective undertakings the influx of rural labour in the towns has declined considerably this year. This is partly due to the fact that the peasants who habitually seek employment as seasonal workers have preferred to remain on their farms during the critical period of transformation from individual to collective undertakings. Apart from this, the decline in the movement of peasants towards the towns is probably also affected by their expectation of a more certain livelihood as members of agricultural communities favoured by the State.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN JULY, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns representing firms employing fifteen workers or more. The number of firms so reporting on August 1, was 7,357, their employees numbering 1,042,710 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for July, was 1,676, having an aggregate membership of 200,122 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 66 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) The Employment Situation at the Beginning of August, 1930, as Reported by Employers

Employment at the beginning of August showed very little general change, according to statements tabulated by the Dominion Bureau of Statistics from 7,357 firms, whose payrolls aggregated 1,042,710 persons, as compared with 1,043,881 on July 1. The index number stood at 118·8, compared with 118·9 on July 1, 1930, and 127·8, 119·3, 110·5, 105.5, 97·5, 95·8, 101·4, 94·2 and 90·0 on August 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. The employers making returns therefore showed a lower level of employment than at the beginning of August of last year, and the index was also very slightly lower than on the same date in 1928, but with these two exceptions, the situation as reported by industrial firms was better than in the summer of any other year since 1920.

Construction and transportation reported large gains, while the tendency was also favourable in mining and communications. On the other hand, logging continued seasonally quiet, and there were also losses in manufacturing and trade.

Employment by Economic Areas

Greater activity was shown in the Western Provinces; the Maritimes reported no general change, while employment declined in Quebec and Ontario.

Maritime Provinces.—Statements were tabulated from 579 firms in the Maritime Provinces employing 95,615 persons, practically the same number as in the preceding month. A large increase was indicated on August 1, 1929, but the index then was much lower than on the date under review. Construction showed important gains at the beginning of August, and shipping, services and manufacturing were also busier; on the other hand, the trend of employment was seasonally downward in logging.

Quebec.—Curtailment was shown in Quebec, according to returns from 1,711 employers with 290,680 workers, as against 296,546 on July 1. Manufacturing, logging, construction and trade reported smaller payrolls, while

other industries showed only slight changes. Employment was in smaller volume than at the beginning of August of a year ago, but the index was higher than in midsummer of any other year on record.

Ontario.—There was a further decline in employment in this province on August 1, when the 3,215 co-operating firms had 414,828 employees, a reduction of 4,136 persons since July 1. Improvement was noted in construction and transportation, but manufacturing, logging and trade registered reductions. A small increase was recorded on the same date of last year, when the index number was higher.

Prairie Provinces.—An important increase in employment was indicated in the Prairie Provinces, where 1,113 employers reported 150,811 workers, or 6,824 more than at the beginning of July; this increase was smaller than that recorded on August 1, 1929, when the index was higher than on the date under review. The most pronounced expansion was in highway construction, but mining, building construction and communications were also more active. On the other hand, trade was slacker and logging also showed seasonal curtailment.

British Columbia.—Continued improvement was registered in British Columbia, chiefly in manufacturing, but also in transportation and construction, while logging showed considerable reductions. Returns were compiled from 741 firms employing 90,786 persons, as against 88,783 in the preceding month. Increases were indicated at the beginning of August of last year, when the situation was more favourable.

Table I gives index numbers by economic areas.

Employment by Cities

Employment advanced in Quebec, Ottawa, Winnipeg and Vancouver, while the tendency was unfavourable in Montreal, Toronto, Hamilton and Windsor and the Adjacent Border Cities.

Montreal.—Employment in Montreal showed a further and larger decrease, contrasting with the increase recorded on August 1, 1929, when the index was higher. A combined payroll of 142,368 employees, or 2,022 less than on July 1, was reported by the 927 co-operating firms. Transportation and construction registered decided improvement, while manufacturing and trade released employees; the greatest loss in the former took place in the iron and steel division.

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

NOTE.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

Quebec.—Continued advances were reported in Quebec City, particularly in construction. Statements were received from 124 employers whose staffs aggregated 14,135 workers, compared with 13,288 in the preceding month. An increase had also been indicated on August 1 a year ago, when the index was a few points lower.

Toronto.—As on the same date last year, there was a falling-off in activity in Toronto, according to data from 980 firms employing 122,871 persons, or 2,467 less than at the beginning of July. The level of employment was lower than on August 1, 1929. Manufacturing (especially of iron and steel and textile products), services and trade were slacker than on July 1, but construction recorded improvement.

Ottawa.—Employment in Ottawa showed an advance, 349 persons being added to the forces of the 152 co-operating employers, who had 14,268 workers on August 1. There were small

Note.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number all employees reported in Canada on the date under review.

Table I—INDEX NUMBERS OF EMPLOYMENT BY ECONOMIC AREAS (AVERAGE CALENDAR YEAR 1926=100)

	Canada	Maritime Provinces	Quebec	Ontario	Prairie Provinces	British Columbia

gains in construction and manufacturing, while only slight changes were indicated in other groups. Employment at the beginning of August, 1929, had remained practically stationary, and the index then was rather lower.

Hamilton.—There were further reductions in staff in Hamilton, 216 establishments reporting 33,776 persons on their paylists, as against 34,479 in their last return. Manufacturing registered general curtailment, that in iron and steel plants being most pronounced. On the other hand, construction afforded greater employment, and there was slight improvement in trade. The situation was not so favourable as on the same date of last year, when increases had been noted.

Windsor and the Adjacent Border Cities.—Continued losses were shown in the Border Cities; statistics were received from 138 firms employing 14,945 workers, or 1,731 less than on July 1. Automobile works largely de-

NOTE.—The ' Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

creased their working forces, while construction was also slacker. Similiar declines had been recorded on August 1, 1929, but employment then was in greater volume.

Winnipeg.—Further advances were shown in Winnipeg, according to 348 firms who had 33,320 employees, as compared with 33,201 at the beginning of July. There were increases in construction and transportation. The improvement evidenced on the corresponding date of last year was more pronounced, and the index then was higher.

Vancouver.—Manufacturing and transportation reported heightened activity in Vancouver, while services and trade were somewhat slacker. Returns were compiled from 286 employers with 30,018 persons on their staffs, as compared with 29,512 in the preceding month. A small increase had been indicated on August 1, 1929, but the level of employment then was higher.

Index numbers of employment by cities are given in Table II.

NOTE.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the tota number of all employees reported in Canada on the date under review.

Manufacturing

Further reductions were made in manufacturing establishments, 4,414 of which reported 530,487 operatives on their payrolls, as compared with 536,097 on July 1. In some cases the contractions were due to shutdowns for holidays, inventories and repairs, and it was expected that work would be resumed early in the month. Increases were recorded in food, pulp and paper, non-ferrous metal and electric current plants, but the rubber, textile and iron and steel industries were seasonally slacker. An increase had been registered on the same date of last year, when the index was over 11 points higher.

Animal Products.—Meat- and fish-packing plants and dairies registered gains, to which firms in all provinces except the Maritimes

[1]The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

contributed. Statistics were received from 215 firms employing 21,152 workers, as compared with 20,516 in the preceding month. The trend on August 1 in other years of the record has usually been downward, and on the date under review activity was greater than in midsummer of any other year on record except 1929.

Leather and Products.—A slight decrease in employment was shown in the leather group, 67 persons being let out from the staffs of the 185 co-operating manufacturers, who employed 15,403 on August 1. The situation was not as favourable as on the corresponding date last year, when improvement had been noted.

Lumber and Products.—Rough and dressed lumber mills continued to take on help, while the furniture, vehicle and other branches of the lumber industry were slacker; on the whole, there was a decline, which contrasted with the advance recorded on August 1, 1929, when the index was higher. The payrolls of the 733 firms furnishing data aggregated 54,011 operatives, as against 54,301 in their last report. There were small decreases in all provinces.

Musical Instruments.—Employment in musical instrument factories was brisker than in the preceding month, but was not so active as in the corresponding month last year. Statements were received from 34 manufacturers who had enlarged their payrolls by 115 persons to 1,908 on August 1, 1930.

Plant Products, Edible.—Continued additions to staffs were registered in fruit and vegetable canneries and sugar and syrup factories; 386 employers in the vegetable food group reported 34,336 workers, or 2,017 more than at the beginning of July. There were gains in all provinces, those in Ontario and Quebec being most extensive. Employment was in greater volume than on August 1 in other years for which data are available.

Pulp and Paper Products.—Pulp and paper and printing and publishing establishments recorded heightened activity in this group. Statistics were received from 546 manufacturers whose payrolls were increased by 1,567 persons to 66,789 on August 1. Most of the improvement took place in Ontario and the Maritimie Provinces. Rather smaller advances were noted in the corresponding month last summer, but the index, at 113·0 on the date under review, was slightly lower than on August 1, 1929.

Rubber Products.—There was a decline in rubber factories, 38 of which had 14,607 persons on their payrolls, compared with 15,427 on July 1. The reduction, which took place chiefly in Quebec, contrasted with the gain reported at the beginning of August a year ago when employment was at a decidedly higher level.

Textile Products.—Cotton, woollen, knitting, carpet, garment and other textile factories recorded reduced working forces, there being a decrease of 2,525 workers in the staffs of the 677 co-operating manufacturers, who employed 76,719. The tendency was generally downward. Smaller losses were noted at the beginning of August, 1929, when the index was higher.

Tobacco, Distilled and Malt Liquors.—Data were received from 148 establishments in these industries, whose payrolls, aggregating 16,081 on August 1, showed little change since July 1. Improvement in tobacco factories was practically offset by losses in breweries and other branches of this group. The situation on August 1 last year was rather more favourable, a larger increase having then been recorded.

Clay, Glass and Stone Products.—For the first time since the beginning of March, there was a reduction in building material plants, according to 167 employers with 13,996 workers, or 248 less than in their last report. The bulk of the decrease was in Ontario. Employment was in smaller volume than on the same date last summer.

Electric Current.—An increase took place in electric current works, 92 of which reported 16,256 employees, as against 16,043 on July 1. There was general improvement throughout the country, except in the Maritime Provinces where a small decline was noted. The index number on the date under review was higher than on August 1 in any other year on record, except 1929.

Electrical Apparatus.—Employment in 57 electrical apparatus works showed a minor decrease at the beginning of August; they employed 16,329 operatives, or 52 less than in the preceding month. The situation was better than on August 1 last year, or of any other year of the record.

Iron and Steel Products.—Automobile, railway car, agricultural implement, foundry and other factories reported reductions, while heating appliance plants were busier. A com-

bined working force of 135,066 persons was indicated by the 696 co-operating manufacturers, who had 141,041 on July 1. Ontario firms reported the greatest curtailment, but there were losses in Quebec and the Maritime Provinces, while gains were indicated in the Western areas. Reductions had also been noted on August 1, 1929, but the index then was much higher than on the date under review.

Non-ferrous Metal Products.—There was an increase in employment at the beginning of August, 379 workers being added to the staffs of the 112 firms furnishing data, who employed 19,949. Almost all the expansion took place in Ontario and British Columbia. Employment was in smaller volume than on August 1, 1929.

Mineral Products.—Statistics tabulated from 85 manufacturers of mineral products showed that they employed 13,989 workers, or 366 less than in the preceding month. There were small declines in all provinces. The index was slightly lower than on the same date a year ago.

Logging

Seasonal dullness continued greatly to affect employment in logging camps in all provinces. Statements were tabulated from 210 firms, employing 16,295 men, or 5,394 less than in the preceding month. Much smaller losses were reported on August 1, 1929, and employment then was in larger volume.

Mining

Coal.—There was an increase of 473 employees in the staffs of the 80 operators furnishing returns, bringing them to 26,134 on August 1, 1930. This gain, which took place chiefly in the Prairie coal fields, was larger than that registered on the same date last year, when the index was higher than on the date under review.

Metallic Ores.—Moderate gains were recorded in metallic ore mines, in which employment was not quite so active as at the beginning of August of last year. Returns were received from 67 mines, with 16,385 workers, as compared with 16,305 in their last report. The improvement shown was chiefly in Ontario.

Non-Metallic Minerals (Other than Coal).—Expansion was noted generally in this division, in which 77 employers enlarged their payrolls by 155 persons to 8,842 at the beginning of August. Employment was maintained at a high level, although the index was lower than in the summer of 1929.

Communications

There was another advance in the personnel of telegraph and telephone companies on August 1, the co-operating branches having 31,346 employees, as against 30,985 in the preceding month. The number engaged in this group was rather lower than on August 1 a year ago.

Transportation

Street Railway and Cartage.—Additions to payrolls were registered in this division, according to data received from 148 employers with 25,605 workers, as against 25,001 on July 1. Improvement had also been recorded on August 1 of last year, when the index was several points higher.

Steam Railway Operation.—The trend of employment in steam railway operation was slightly unfavourable, except in Ontario. The 103 companies and divisional superintendents furnishing data reported 81,678 employees, compared with 81,774 in their last report. Increases had been recorded on the same date in 1929, when the index was higher.

Shipping and Stevedoring.—Statements were tabulated from 83 companies in this group, employing 18,646 workers or 647 more than on July 1, 1930. There were increases in the Maritime Provinces, Ontario and British Columbia. Declines had been noted at the beginning of August a year ago, but the index number then was higher.

Construction and Maintenance

Building.—Considerable improvement was again reported in building construction, 741 contractors adding 1,859 persons to their staffs, bringing them to 61,149 at the beginning of August. There were increases in all provinces except Ontario. Conditions were better than in the same month in any other year of the record, with the exception of 1929.

Highway.—The number engaged on highway construction and maintenance showed a further important increase in all provinces except Quebec. Data were received from 284 employers, with 66,156 workers on their payrolls, as compared with 58,066 at the beginning of July. Employment generally in this in-

dustry has been very active in recent months; most of the expansion on the date under review was in the Prairie Provinces, but employment in this group in New Brunswick was also exceptionally brisk.

Railway.—As in midsummer of most years of the record, there was a decline in this industry on August 1, 1930, when 59 companies and divisional superintendents reduced their staffs from 47,494 on July 1, to 47,259 men on the date under review. The greatest contractions were in Quebec and the Prairie Provinces. The index number was lower than at the beginning of August, 1929, when curtailment had also been indicated.

Services

Hotels reported further small additions to their payrolls, while slight losses were indicated in other groups in this division; 238 firms employed 24,521 persons, or 156 less than at the beginning of July. An increase had been recorded on August 1, 1929, when the situation was rather more favourable.

Trade

Activity in wholesale houses again advanced slightly, but there was a falling-off in retail stores, according to 788 trading establishments, which employed 88,207 workers, as compared with 90,156 on July 1. Ontario and Quebec registered most of this decrease. Declines were also recorded at the beginning of August last year, when the index was practically the same.

Tables

Index numbers of employment by economic areas, leading cities and industries, are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.

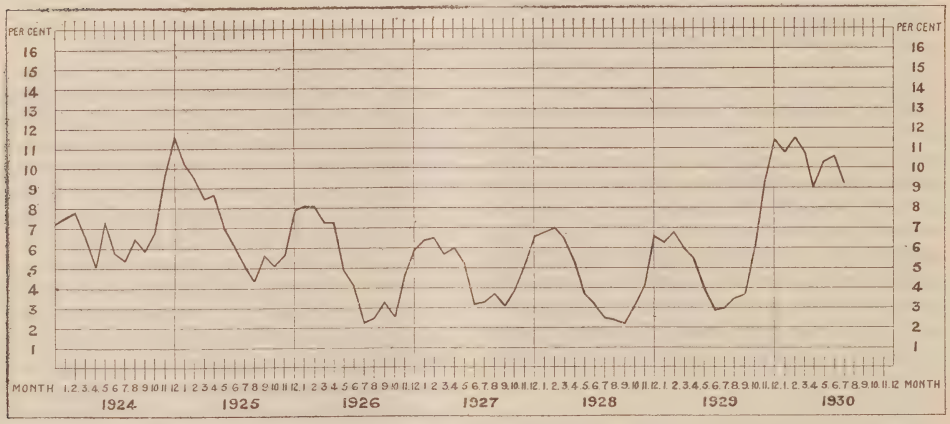
(2) Unemployment in Trade Unions at the Close of July, 1930

Unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades or who are idle because of illness are not considered as unemployed. Unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variations in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

The present articles on unemployment among members of local trade unions deals with the situation at the close of July and is based on the returns furnished to the Department of Labour by 1,676 labour organizations, embracing a membership of 200,122 persons. Of these, 18,473 were idle on the last day of the month, a percentage of 9·2 contrasted with an unemployment percentage of 10·6 at the end of June. This employment expansion indicated in comparison with June was largely confined to the Province of Quebec, garment establishments in Montreal especially showing important advances. In the Prairie Provinces, and New Brunswick also a slightly improved situation was indicated. Nova Scotia unions, on the other hand, reported moderate declines in activity and employment for Ontario and British Columbia unions eased off slightly. All provinces shares in the retrogressive movement shown in the comparison with July last year when 3·0 per cent of the members reported were without work, Nova Scotia and New Brunswick unions indicating moderate employment contractions while the reductions in the remaining provinces were noteworthy.

A separate tabulation is compiled each month of unemployment in the largest city in each provinces, except Prince Edward Island. Montreal unions during July registered quite pronounced improvement from June, the gains in employment recorded in the garment establishments of this city being chiefly responsible for the better situation which obtained. Moderate increases in activity were reported by Edmonton unions, and in Saint John and Winnipeg the employment tendency was also upward. On the other hand, Halifax and Regina unions reported contractions in activity of about 5 per cent and 4 per cent respectively, and lesser declines were indicated by Vancouver and Toronto unions. With the exception of Saint John all cities showed noteworthy employment curtailment from July of last year,

the reductions in Regina being particularly outstanding while in St. John a fractional employment recession only was noted.



Accompanying this article is a chart which indicates the unemployment trend by months from January, 1924, to date. Contrary to the course traced by the curve in June the trend in July was slightly downward, indicative of an improved situation through the level reached at the close of the month was considerably above that of July, 1929.

The situation in the manufacturing industries was decidedly better during July than in the preceding month, as shown by the reports tabulated from 469 unions with an aggregate of 58,870 members. Of those 4,276, or a percentage of 7·3 were idle on the last day of the month, contrasted with 12·2 per cent in June. The determining factor in this improvement recorded in July was the notable recovery from previous depression shown by garment workers, who during the month reviewed reported a busily engaged situation. Increases of much lesser magnitude were indicated also by iron and steel workers, and employment for wood and fur workers was at a somewhat higher level. On the other hand, pulp and papermakers, printing tradesmen, leather, jewellery, hat and cap, and glass workers all reported some reduction in employment volume afforded. In making a comparison with the returns for July last year in the manufacturing industries, when 3·6 per cent of the members reported were idle, practically all trades contributed a share to the unemployment increase shown during the month reviewed, the declines in employment indicated by iron and steel, leather, textile and garment workers affecting the greatest number of members.

From unions of coal miners 42 reports were tabulated at the end of July, embracing a membership of 15,664 persons, 1,372 of whom were out of work, a percentage of 8·8 contrasted with 6·9 per cent in June and with 1·8 per cent in July last year. The Nova Scotia mines were responsible entirely for the slight increase in idleness reported over June, the Alberta situation remaining the same in both months, while in British Columbia all members were reported busy, contrasted with a fractional unemployment percentage only in June. Alberta miners indicated a larger drop in the volume of work available from July of last year and in Nova Scotia lesser declines occurred. In British Columbia no miners were reported idle in either of the months compared.

Employment in the building trades showed a slight falling off during July from the previous month, the 214 unions from which reports were tabulated with 29,636 members indicating 28·3 per cent of inactivity compared with 26·2 per cent in June. The declines reported by painters, decorators and paper hangers during July involved the greatest number of workers, though conditions were somewhat quieter also among carpenters and joiners, hod carriers and building labourers, plumbers and steamfitters and electrical workers. On the contrary, bricklayers, masons and plasterers, bridge and structural iron workers, granite and stone cutters and tile layers, lathers and roofers were somewhat better engaged than in June. Compared with the situation in

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

July last year when 7·0 per cent of the members reported in the building trades were without work, all trades participated in the downward employment movement shown during the month reviewed, the most notworthy declines being reflected by bricklayers, masons and plasterers and carpenters and joiners.

The transportation industries during July reported a slight gain in employment ,from the previous month, though the situation declined somewhat from July a year ago. For the month reviewed returns were tabulated from 714 unions of transportation workers with 68,745 members, 4·9 per cent of whom were idle on the last day of the month, compared with 6·0 per cent in June and with 1·9 per cent in July last year. Steam railway employees, whose returns constitute about 80 per cent of the entire group membership reporting, and street and electric railway employees, registered nominal gains in activity from June, while the shipping industry showed substantial improvement. Teamsters and chauffeurs, on the other hand, suffered some reduction in the volume of work available. In all divisions of the transportation industries a lower employment level was indicated from July of last year, the reductions among steam railway employees being the most noteworthy.

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

Month	N.S. and Pr. Edward Island.	New Brunswick	Quebec	Ontario	Manitoba	Saskatchewan	Alberta	British Columbia	Canada
Average 1919	3·1	2·0	3·4	2·7	2·1	3·2	2·0	7·9	3·4

Among longshore workers, whose returns are tabulated separately each month, an unemployment percentage of 14·0 was recorded at the end of July, contrasted with 15·0 per cent of idleness in June and with 13·4 per cent in July a year ago. The percentage for the month reviewed was based on the reports tabulated from a total of 12 associations of these workers, covering a membership of 6,191 persons.

Returns from 7 unions of retail clerks with 1,341 members at the end of July showed that adequate work was provided for all members as in June, while in July last year a fractional unemployment percentage only was indicated.

The 63 unions of civic employees from which reports were tabulated at the end of July with 7,894 members reported 0·6 per cent of their members idle, contrasted with 0·4 per cent in June and with 0·5 per cent in July last year.

The miscellaneous group of trades showed little variation during July from the previous month, the percentage of unemployment rising from 10·0 in June to 10·8 at the close of the month reviewed. The July percentage was based on the reports tabulated from a total of 116 unions with 6,622 members. Stationary engineers and firemen, unclassified workers and theatre and stage employees all reported contractions in the employment volume which were in a large measure offset by the gains reported among hotel and restaurant employees and barbers. Less favourable conditions prevailed in the miscellaneous group as a whole than in July last year, when 3·6 per cent of idleness was registered. All trades sharing to some extent this employment decline.

Fishermen reported all members at work at the close of July, contrasted with 1·3 per cent of idleness in both the previous month and July a year ago. For the month reviewed reports were tabulated from 3 unions of these workers, with 763 members.

TABLE II—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY GROUPS OF INDUSTRIES

Month	Fishing.	Lumbering and Logging.	Mining.	Manufacturing industries.	Vegetable products.	Pulp and paper products.	Pulp and paper mill workers.	Printing, publishing and lithographing.	Wood products.	Fibres, textiles and textile products.	Textile and carpet workers.	Garment workers.	Hat, cap and glove workers.	Animal products.	Iron and its products.	Non-ferrous metals.	Clay, glass and stone products.	Mineral products.	Miscellaneous manufacturing industries.	Building and construction.	Transportation.	Shipping and stevedoring.	Steam railway operation.	Local transportation.	Communication.	Telegraph operation.	Telephone operation.	Trade (retail shop clerks).	Services.	Governmental.	Miscellaneous.	All occupations.

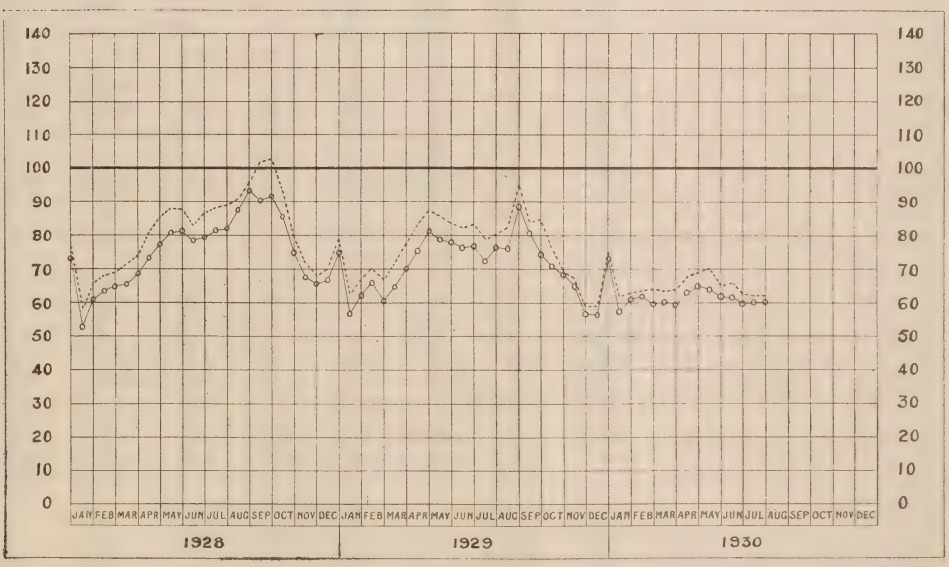
Lumber workers and loggers reported a large drop in the volume of work afforded during July from the previous month, the 5 unions from which reports were tabulated with 845 members indicating an unemployment percentage of 22·2 contrasted with 2·3 per cent in June. Extensive curtailment was also noted from July of last year, when the percentage of idleness stood at 1·1.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1929, inclusive, and also the percentage of unemployment by provinces for July of each year from 1919 to 1927, inclusive, and for each month from January, 1928, to date. Table II summarizes the returns in various groups of industries for same months as in Table I.



(3) Employment Office Reports for July, 1930

The volume of business transacted by the offices of the Employment Service of Canada during the month of July 1930, as shown by the average daily placements effected, showed a decrease of 6 per cent from that of the preceding period and was nearly 27 per cent below that of the corresponding period last year. The total placements for the entire month under review were slightly higher, however, due to the fact that there were two more working days in July than in June. All groups, except logging, transportation and services were in manufacturing, services, and construction and maintenance.

The accompanying chart shows the trend of employment since January, 1928, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. In viewing the trend of the curve of vacancies and of placements in relation to applications throughout July, no appreciable change was noticed, the

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ———— Vacancies - - - - - - - - Placements o—o—o—o—o—o

showed gains in placements in comparison with the work effected during the previous month. Of the industrial divisions reporting declines, that in services was the largest. When compared with July last year, all groups registered contractions, the heaviest of which slight fluctuation of less than 1 per cent in both instances being upward, but at the close of the month the curve of vacancies was 18 points below that recorded at the end of July, 1929, and the curve of placement 16 points below that recorded at the correspond-

ing date last year. The ratio of vacancies to each 100 applications was 62·2 during the first half and 62.3 during the second half of July, 1930, in contrast with ratios of 79·1 and 80·4 during the corresponding periods of 1929. The ratios of placements to each 100 applications during the periods under review were 60·2 and 60·3 as compared with 72·5 and 76.5, respectively, during the corresponding month of 1929.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during July, 1930, was 1,006, as compared with a daily average of 1,418 during the corresponding month a year ago and with 1,093 recorded daily in June, 1930.

The average number of applications for employment received daily by the offices of the Service during the month under review was 1,616, in comparison with 1,777 in July, 1929. Applications for work during the preceding month of 1930 averaged 1,704 daily.

The average number of placements made daily by the offices of the Service during July, 1930, was 974, of which 612 were in regular employment and 362 in work of one week's duration or less, as compared with a total daily average of 1,037 during the preceding month. Placements in July a year ago averaged 1,325 daily, being 888 in regular and 437 in casual employment.

During the month of July, 1930, the offices of the Service referred 26,169 persons to vacancies and effected a total of 25,293 placements. Of these the placements in regular employment were 15,895, of which 11,811 were for men and 4,084 for women, while placements in casual work totalled 9,398. The number of vacancies reported by employers was 17,722 for men and 8,428 for women, a total of 26,150, while applications for work numbered 42,024, of which 29,479 were from men and 12,545 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1920, to date:—

Year	Placements		
	Regular	Casual	Totals
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552
1924	247,425	118,707	366,132
1925	306,804	106,021	412,825
1926	300,226	109,929	410,155
1927	302,723	112,046	414,769
1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930 (7 months)	99,588	79,402	178,990

Nova Scotia

Employment opportunities as indicated by orders received at employment offices in Nova Scotia during July were nearly 8 per cent less than in the preceding month and over 13 per cent below the corresponding month last year. There was a decline also in placements of nearly 2 per cent in comparison with June and of over 5 per cent when compared with July, 1929. Decreased placements under construction and maintenance were responsible for the decline from July last year, although there were fewer placements also in the manufacturing and farming industries. These reductions were, however, for the greater part offset by gains in logging, transportation, services and trade. Industrial divisions in which most of the placements were effected during the month included: manufacturing, 57; logging, 59; farming, 44; transportation, 36; construction and maintenance, 57; trade, 144; and services, 345, of which 258 were of household workers. Regular employment was found for 117 men and 76 women.

New Brunswick

During July, positions through employment offices in New Brunswick were nearly 17 per cent less than in the preceding month, and nearly 12 per cent below the corresponding month last year. Placements were over 13 per cent less than in June and over 11 per cent below July, 1929. Under the latter comparison, when considered by industrial divisions, transportation showed a nominal gain, there was no change in services and small declines in all other groups, of which construction and maintenance was the largest. Placements by industrial divisions included: manufacturing, 45; logging, 39; farming, 30; construction and maintenance, 157; trade, 28; and services, 507, of which 403 were of household workers. During the month 225 men and 78 women were placed in regular employment.

Quebec

There was an increase of nearly 9 per cent in the number of positions offered through employment offices in the Province of Quebec during the month of July when compared with the preceding month, but a decline of over 33 per cent in comparison with the corresponding month last year. Placements also were over 10 per cent higher than in June, but over 30 per cent below July, 1929. Logging was the only industrial group in which more placements were made than during July last year. Of the declines those in

construction and maintenance were the largest. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 192; logging, 431; farming, 151; construction and maintenance, 284; trade, 36; and services, 652, of which 424 were of household workers. Regular employment was found for 1,153 men and 477 women.

ONTARIO

The demand for workers as indicated by orders listed at employment offices in Ontario during July was over 9 per cent less than in the preceding month and over 35 per cent lower than during the corresponding month last year. There was a decline also in placements of 7 per cent when compared with June, and of nearly 31 per cent when compared with July, 1929. All industrial divisions participated in the declines in placements from July last year, those of manufacturing, construction and maintenance and services being the most pronounced. Placements by industrial groups included: manufacturing, 1,036; logging, 636; farming, 1,654; mining, 91; transportation, 226; construction and maintenance, 2,559; trade, 342; and services, 3,802, of which 2,008 were of household workers. There were 5,201 men and 1,494 women placed in regular employment during the month.

MANITOBA

During July, orders received at employment offices in Manitoba called for over 11 per cent more workers than in the preceding month, but nearly 16 per cent less than during the corresponding month last year. There was an increase of 12 per cent in placements over June, but a decline of nearly 18 per cent when compared with July, 1929. Placements in farming and mining were higher than during July last year, but these gains were more than offset by declines in all other groups, of which those in services and construction and maintenance were the most pronounced. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 93; logging, 51; farming, 1,172; mining, 37; construction and maintenance, 158; trade, 111; and services, 1,742, of which 1,358 were of household workers. During the month 1,309 men and 661 women were placed in regular employment.

SASKATCHEWAN

Orders listed at employment offices in Saskatchewan during July called for 26 per cent more workers than in the preceding month, but nearly 11 per cent less than during the corresponding month last year. There was a gain also in placements of over 25 per cent when compared with June, but a decline of nearly 10 per cent in comparison with July, 1929. More workers were placed in the farming, mining and logging industries during the month under review than in July last year, but these gains were more than offset by declines in all other divisions of which that in services was the largest. Placements by industrial divisions included: manufacturing, 125; farming, 825; transportation, 76; construction and maintenance, 648; trade, 81; and services, 1,014, of which 525 were of household workers. There were 1,195 men and 430 women placed in regular employment.

ALBERTA

Opportunities for employment as indicated by orders received at Alberta offices during July were over one per cent less than in the preceding month and 22 per cent below the corresponding month last year. There was a decline also of one per cent in placements when compared with June, and of 22 per cent in comparison with July, 1929. Construction and maintenance was the only group in which more placements were made than during July last year and this was attributable to work undertaken in relief of unemployment. Of the declines, those in services, farming and manufacturing were the most substantial. Placements in industrial divisions included: manufacturing, 111; farming, 745; mining, 41; construction and maintenance, 768; trade, 113; and services, 718, of which 476 were of household workers. During the month 1,393 men and 392 women were placed in regular employment.

BRITISH COLUMBIA

There was a gain of nearly 7 per cent in the number of positions offered through employment offices in British Columbia during July when compared with the preceding month, but a decline of over 40 per cent in comparison with the corresponding month last year. Placements were 10 per cent higher than in June, but over 39 per cent lower than in July, 1929. All industrial divisions participated in declines in placements from July last year, those in manufacturing and construction and maintenance being quite substantial. Placements by industrial divisions included: manufacturing, 275; logging, 124;

farming, 499; mining, 35; transportation, 140; construction and maintenance, 588; trade, 110; and services, 1,089, of which 525 were of household workers. Regular employment was found for 1,218 men and 476 women.

Movement of Labour

During the month of July, 1930, the offices of the Employment Service of Canada made 15,895 placements in regular employment, of which 8,911 were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter 794 were granted the Employment Service reduced transportation rate, 633 going to points within the same province as the despatching office and 161 to other provinces. The reduced transportation rate which is 2·7 cents per mile with a minimum fare of $4 is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Transportation certificates issued at Quebec offices during July were 52 in number, 24 of which were to provincial points and 28 to centres in other provinces. Provincially the movement of labour was from Montreal, and included 23 sawmill labourers and 1 bushman going to points within the territory covered by that office. All workers travelling outside the province were bushmen destined to Pembroke and despatched from Hull.

By offices in Ontario 166 transfers at the reduced rate were effected, 137 of which were provincial and 29 interprovincial. Within the province 50 bushmen, 3 carpenters and 1 blacksmith travelled at the reduced rate from Port Arthur, 54 bushmen from Sudbury, and 15 bushmen from Fort William to centres within their respective zones. From Sudbury also, 11 rockmen went to Sault Ste. Marie. The Kingston zone received 1 stonemason from Toronto and 1 penitentiary steward from Windsor, while Timmins was the destination of 1 saw filer shipped from Ottawa. Of the workers going to other provinces 26 were miners conveyed from Timmins to the Winnipeg zone, to which zone also 1 salesman proceeded from Ottawa. In addition, the London office transferred 1 granite cutter to New Glasgow and North Bay 1 painter to Rouyn.

Workers who availed themselves of reduced rate certificates in Manitoba during August were 290 in number, 211 of whom went to provincial employment and 79 to points outside. The Winnipeg office effected the transfer of all these workers, which provincially included 3 hotel waitresses, 2 laundresses, 1 institutional attendant, and 1 farm housekeeper going to Dauphin, 5 farm domestics and 3 hotel workers to Brandon, and 145 farm hands, 35 miners, 11 highway construction workers, 2 machinists, 1 boiler maker, 1 tractor engineer and 1 millwright to centres within the Winnipeg zone. Saskatchewan agricultural districts received 56 of the workers going outside the province, 51 of whom were farm hands and 5 farm domestics, while to Port Arthur and vicinity were despatched 8 pulp cutters, 7 lumber workers, 2 waitresses, 1 gardener, 1 farm hand, 1 town general, and 1 hospital cook. In addition, 1 highway construction cook was conveyed to Yorkton and 1 town housekeeper to Saskatoon.

The business transacted by Saskatchewan offices during July involved an issue of 65 reduced rate certificates, 63 of which were to points within the province. Of these 51 were granted to farm hands and 3 to farm domestics going to employment at various rural points, the majority of whom travelled on certificates received at Regina. From Regina also, 1 hotel waitress was sent to Moose Jaw, 1 domestic to Swift Current, 1 hotel cook to Prince Albert, and 2 teachers and 1 housekeeper within the Regina zone. Travelling from Moose Jaw 1 hospital cook went to Estevan and 1 waitress to a point within the Moose Jaw zone, while from Saskatoon 1 highway construction cook proceeded to employment within the district covered by that city office. Of the 2 persons going to employment outside the province 1 was a handyman bound from Regina to Brandon and 1 a laundress going from Saskatoon to Dauphin.

Alberta offices were responsible for the transfer of 109 workers, 95 of whom went to provincial situations and 14 to employment in other provinces. From Edmonton the provincial movement included 2 farm hands going to Drumheller, 1 farm hand to Calgary, 1 farm domestic to Lethbridge, and 26 mine workers, 17 farm hands, 2 farm housekeepers, 14 highway construction workers, 5 hotel employees, 4 bridgemen, 1 sawmill worker, 1 cook and 1 housekeeper to centres within the Edmonton zone. In addition the Calgary office effected transfers of 8 miners and 1 sawmill labourer to Edmonton, 4 farm hands to Drumheller, 1 farm hand and 1 farm housekeeper to Lethbridge, 1 domestic and 1 greenhouse man to Medicine Hat, and 3 farm hands within the Calgary zone. The interprovincial movement from Edmonton comprised the transfer of 7 farm hands to Saskatoon and 1 farm hand to North Battleford, while from Calgary 1 farm hand and 1 farm housekeeper travelled to Saskatoon, 1 hotel cook to Revelstoke and 1 ranch cook to Kamloops. The balance of this movement outside the prov-

ince was from Lethbridge, which office despatched 1 pattern maker to Nelson and 1 bricklayer to Cranbrook.

Reduced rate certificates granted by British Columbia offices during July were 112 in number, 103 of which were provincial and 9 interprovincial. The latter were issued to farm hands, 4 of whom went to points in Alberta, 4 to Saskatchewan districts, and 1 to Manitoba. Several offices assisted in the transfer of these workers. Provincial certificates were granted at Vancouver to 7 mine workers, 6 railway construction workers, 4 carpenters and 1 farm hand proceeding to Penticton, 11 cannery workers, 1 farm hand, 1 farm housekeeper and 1 waitress to Kelowna, 4 carpenters and 1 farm housekeeper to Nelson, 3 farm hands to Prince George, 1 first-aid man and 1 farm manager to Revelstoke, and to 22 loggers, 4 tunnel construction workers, 1 blacksmith, 1 carpenter and 1 flunkey going to points within the Vancouver zone. In addition Prince George transferred 13 railway construction workers, 8 loggers and 6 highway construction workers, Nelson 3 farm hands and 1 machinist, and Prince Rupert 1 building construction worker to points within their respective zones.

Of the 794 workers who took advantage of the Employment Service reduced transportation rate during July, 403 were transported by the Canadian National Railways, 353 by the Canadian Pacific Railway, 27 by the Temiskaming and Northern Ontario Railway, 10 by the Pacific Great Eastern Railway, and 1 by the Northern Alberta Railway.

(4) Building Permits Issued in Canada in July, 1930

The value of the building authorized during July showed a seasonal decrease of $2,204,514 or 12·3 per cent as compared with the preceding month, while there was also a decline of $6,971,620 or 30·7 per cent as compared with July, 1929. The aggregate for the 61 cities in July, 1930, was $15,730,964, as against $17,935,478 in June, 1930, and $22,702,584 in July, 1929. The total for the first seven months of 1930, though lower than 1929 or 1928, was nevertheless higher than in any of the years 1920-1927, and was also higher than the average for the last ten years, while the wholesale cost of building materials was lower than in most years of the record.

Some 50 cities furnished detailed statistics, showing that they had issued nearly 900 permits for dwellings valued at approximately $3,500,000, and some 2,300 permits for other buildings estimated at about $7,200,000. In June, authority was given for the erection of some 1,200 dwellings and 2,900 other buildings, valued at approximately $6,000,000 and $11,000,000, respectively.

Increases over June were reported in Quebec, Alberta and British Columbia, where there were gains of 47·3, 24·8 and 4·7 per cent, respectively. Of the reductions in the other provinces, that of $3,743,437 or 37·3 per cent in Ontario was most pronounced.

In comparison with July, 1929, New Brunswick and Quebec registered improvement, there being gains of 45·6 per cent and 7·2 per cent respectively, in those provinces. Elsewhere declines were indicated, that of $3,031,228 or 32·5 per cent in Ontario being largest.

Of the larger cities, Montreal reported an increase over June, 1930, and also over July, 1929. Vancouver showed a gain in the former but a decline in the latter comparison, while Toronto and Winnipeg recorded losses in both comparisons. Of the other centres, Moncton, Quebec, Chatham, Fort William, Guelph, Kingston, Ottawa, Porth Arthur, Sarnia, East Windsor, Woodstock, Edmonton, Kamloops, Nanaimo and North Vancouver showed gains as compared with both June, 1930, and July, 1929.

Cumulative Record for First Seven Months, 1920-1930.—The following table gives the value of the building authorized by 61 cities during July and in the first seven months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first seven months of the years since 1920 are also given (1926 average=100).

Year	Value of permits issued in July	Value of permits issued in first seven months	Indexes of value of permits issued first seven months (1920=100).	Average indexes of wholesale prices of building materials in first seven months. (1926 average=100).
	$	$		
1930.....	15,730,964	98,944,988	131·1	98·9
1929.....	22,702,584	147,311,851	194·7	99·5
1928.....	25,761,956	127,798,943	169·3	97·3
1927.....	16,369,195	97,211,914	128·8	96·7
1926.....	18,683,415	97,443,834	129·1	100·8
1925.....	12,812,603	78,712,320	104·3	103·1
1924.....	11,681,196	72,355,350	95·8	109·9
1923.....	13,078,547	86,126,043	114·1	111·7
1922.....	15,740,810	87,022,484	115·3	108·3
1921.....	10,965,891	66,737,575	88·4	130·2
1920.....	13,743,045	75,497,755	100·0	144·3

The aggregate for the first seven months of this year was less by 32·8 per cent than in 1929, the previous high level of the record, but it was six per cent greater than the average of 93,621,807 recorded in the ten years, 1920-29, while the average index number of wholesale prices of building materials continued lower than in most of the years since 1920.

The accompanying table I gives the value of the building permits issued by 61 cities during June and July, 1930, and July, 1929. The 35 cities for which records are available since 1910 are marked with asterisks.

Conference of Textile Industries in Canada

The Conference of representatives of all branches of the textile manufacturing and garment and clothing industries of Canada (LABOUR GAZETTE, May, 1930, page 481), which was to have been held at Ottawa in June, was postponed until September on account of the Dominion parliamentary elections. One of the chief subjects to be dealt with is that of distribution. "During recent years," it is pointed out, "one of the greatest economic changes which has taken place all over the world has been the growing interest and importance of marketing and distribution as a factor in industrial development. Up to recent years questions affecting production had absorbed most of the attention of manufacturers. Development of mechanical equipment in practically all lines of manufacture has simplified production, so that to-day the problem is not how to make goods, but how and where to sell them. New methods of distribution have also been evolved, creating a situation which is receiving more and more attention. All branches of the clothing industry are definitely affected by these changes."

By an Order in Council issued at Edmonton on July 10, the whole of the Coal Mines Regulation Act of Alberta, and all regulations made thereunder, were declared to be applicable to all shale mines in the province. The provisions of this Act, which was passed at the recent session of the Legislature, were outlined in the last issue, page 759.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary showing the employment situation during July is reproduced below. The following report on employment conditions in the United States is based on the information published by the United States Department of Labour, giving statistics showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for August, 1930, and previous months are reproduced below.

Great Britain

There was a further decline in employment during July. A substantial increase in the numbers unemployed occurred in coal and iron ore mining, iron and steel manufacture, engineering, ship-building, motor and other vehicle manufacture, the metal trades, the textile industries with the exception of the hemp and rope industry, the clothing trades, building and public works contracting and in shipping service. On the other hand, there was some improvement in tinplate manufacture, in paper making, and in hotel and boarding-house service.

Among the workpeople, numbering approximately 12,100,000, insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at July 21, 1930, (including those temporarily stopped as well as those wholly unemployed), was 17·1, as compared with 15·8 at June 23, 1930, and with 9·7 at July 22, 1929. The percentage wholly unemployed at July 21, 1930, was 11·6, as compared with 11·1 at June 23, 1930; while the percentage temporarily stopped was 5·5, as compared with 4·7. For males alone the percentage at July 21, 1930, was 17·4 and for females 16·5; at June 23, 1930, the corresponding percentages were 15·9 and 15·4.

At July 21, 1930, the numbers of persons on the registers of Employment Exchanges in Great Britain were 1,226,404 wholly unemployed, 652,451 temporarily stopped and 93,875 normally in casual employment, making a total of 1,972,730. This was 157,388 more than a month before and 850,087 more than a year before.

The total on July 21, 1930, included 1,410,198 men, 49,081 boys, 469,835 women and 43,616 girls. The total of 1,226,404 wholly unemployed was made up approximately of 807,900 insured persons who had paid at least 30 contributions during the preceding two years and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 351,000 insured persons who had paid less than 30 contributions during the preceding two years; and 67,500 uninsured persons. The claimants for benefit, numbering 1,114,765, included 209,220 men, 4,480 boys, 39,511 women and 2,283 girls who had been on the Register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at July 21, 1930, was 2,035,727. At July 28 the total was 2,071,882.

United States

The Bureau of Labor Statistics of the United States Department of Labor reports the changes in employment and pay-roll totals in July as compared with June, based on returns made by 39,546 establishments, in 13 major industrial groups, having in July 4,806,458 employees, whose combined earnings in one week were $121,582,968.

The combined total of these 13 industrial groups shows a decrease of 2·6 per cent in employment from June to July, and a decrease of 7·1 per cent in employees' earnings. Excluding manufacturing, the total of the remaining 12 industrial groups shows a gain in employment of 1 per cent, with a decrease of 1·8 per cent in pay-roll totals. Manufacturing industries alone, which have shown a considerable decrease in employment in July in each of the seven years preceding 1930, reported a decrease of 4·6 per cent in employment accompanied by a decrease of 9·8 per cent in pay-roll totals. A large number of the leading manufacturing industries customarily take advantage of, and prolong, the Fourth of July closing to make repairs and

take inventories. This arrangement and the beginning of the regular vacation season together result in noticeably decreased employment in July, and in even more pronounced decreases in pay-roll totals.

Increased employment in July was shown in 6 of the 13 industrial groups: Canning and preserving showed a seasonal increase of more than 52 per cent and summer resort hotels increased hotel employment 3·4 per cent; increases of from 0·2 per cent to 1·2 per cent in employment were shown in the operation of telephone and telegraph, electric-railroad, and power, light, and water companies, and in anthracite mining.

The remaining 7 industrial groups reported fewer employees in July than in June; metalliferous mining fell off 4·9 per cent; manufacturing industries, 4·6 per cent; bituminous mining and quarrying, 0·4 per cent each; crude petroleum production, 0·3 per cent; wholesale trade, 0·5 per cent; and retail trade, 5·2 per cent. The figures of the several groups are not weighted according to the relative importance of each group and therefore they represent only the employees in the establishments reporting.

Changes in employment and pay-roll totals in manufacturing industries in July as reported above are based upon returns made by 13,147 establishments in 54 of the principal manufacturing industries of the United States. These establishments in July had 3,011,509 employees, whose combined earnings in one week were $74,648,141.

The leather group alone of the 12 groups of industries showed increased employment and pay-roll totals in July, this being due to the seasonal increase in the boot and shoe industry. Among the remaining 11 groups, the smallest decrease, 0·6 per cent, was shown in both the food and chemical groups, and the outstanding decrease, 7·3 per cent, was shown in the textile group.

Six of the 54 separate industries reported increased employment in July—cane sugar refining, 6·7 per cent; fertilizers, 4·5 per cent; ice cream, 3·7 per cent; boots and shoes, 3·2 per cent; flour, 2·3 per cent; and book and job printing 1·1 per cent.

The outstanding decreases in employment from June to July were from 10·1 per cent to 13·9 per cent and occurred in the stove, glass, millinery and lace, carpet, agricultural implement, and women's clothing industries. The iron and steel industry reported 4·4 per cent fewer employees and a drop of 14·5 per cent in employees' earnings; foundries and machine shops reported decreases of 4·5 per cent and 11·4 per cent in the two items respectively; and automobiles reported decreases of 8·8 per cent and 11 per cent in the two items.

Each of the nine geographic divisions showed decreased employment in July as compared with June. The smallest decreases—from 3·1 per cent to 3·6 per cent—having been in the Middle Atlantic, West North Central, South Atlantic, and Mountain divisions; the greatest decrease, 5·8 per cent, was reported by the East North Central division.

A separate summary is made of the latest data available relating to all employees, exclusive of executive and officials, on Class 1 railroads. This tabulation is made from Interstate Commerce Commission reports for the months of April and May, 1930, and therefore cannot be included in the general statement for the month of July. The number of employees of Class 1 railroads as at May 15 totalled 1,584,643, representing an increase of 1·9 per cent since April 15, 1930. The amount of pay-roll in the entire month of May was $221,588,551, representing an increase over the previous month of 1·8 per cent.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labor, indicate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928. 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent; April, 1930, 21 per cent; May, 1930, 20 per cent; June, 1930, 20 per cent; July, 1930, 22 per cent; August, 1930, 22 per cent.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30 last. The text of this measure appeared in the April issue at page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(*a*) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(*b*) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

Section 5 of the Fair Wages and Eight-Hour Day Act authorized the Governor in Council, on the recommendation of the Minister of Labour, to make necessary regulations under the Statute. Those regulations have not yet been made. The Act, however, was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900 and is now expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924, requires that all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, drydocks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of the transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada" must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen, in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time, rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification

of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to past and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addreses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are especially instructed to do all in their power to see that the labour

conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

DEPARTMENT OF FISHERIES

Contracts in Group "A" (Construction, etc.)

Construction of a 90 foot boat for the Halifax Office of the Biological Board of Canada. Name of contractors, W. C. McKay & Sons, Ltd., Shelburne, N.S. Date of contract, June 18, 1930. Amount of contract for hull only, $9,250. The General Fair Wages Clause was included in the contract.

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Construction of repairs to Sections 31 and 36 of the Fortification Walls, The Citadel, Quebec, P.Q. Name of contractor, Mr. Abel Ratte, of Quebec, P.Q. Date of contract, August 7, 1930. Amount of contract, $10,290. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Carpenters	$0 60	8
Masons	1 00	8
Stonecutters	0 75	8
Labourers	0 40	8

Construction of repairs to Section 23 of the Fortification Walls, The Citadel, Quebec, P.Q. Name of the contractor, Mr. Abel Ratte, Quebec, P.Q. Date of contract, August 8, 1930. Amount of contract, $3,600. The fair wages schedule shown above was inserted in this contract also.

Construction of repairs to Sections 12, 16 and 17 of the Fortification Walls, The Citadel, Quebec, P.Q. Name of contractor, Mr. Emile Frenette, Quebec, P.Q. Date of contract, August 8, 1930. Amount of contract, $7,602. The fair wages schedule shown above was inserted in this contract also.

Construction of repairs to Sections 7 and 29 of the Fortification Walls, The Citadel, Quebec, P.Q. Name of contractors, J. B. Jinchereau & Fils, Quebec, P.Q. Date of contract, August 8, 1930. Amount of contract, $3,635. The fair wages schedule shown above was inserted in this contract also.

Construction of repairs to Sections 35 and 69A of the Fortification Walls, The Citadel, Quebec, P.Q. Name of contractors, Ign. Bilodeau Ltd., Quebec, P.Q. Date of contract, August 8, 1930. Amount of contract, $4,424. The fair wages schedule shown above was inserted in this contract also.

Conversion of brick stables into garage at Tete de Pont Barracks, Kingston, Ont. Name of contractor, L. McDonnell, Kingston, Ont. Dated of contract, August 7, 1930. Amount of contract, $23,650. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers and masons	$1 10	8
Carpenters	0 90	8
Painters	0 80	8
Plumbers and steamfitters	0 90	8
Electricians	0 85	8
Labourers	0 45	8
Driver, cart and horse.....per day	5 00	8
Driver, wagon and team.... "	6 50	8

Construction of buildings at the Radio Station, Forrest, Man. Name of contractors, G. W. Epton Co., Ltd., Brandon, Man. Date of contract, August 9, 1930. Amount of contract, $13,735. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers	$1 35	8
Carpenters	1 00	8
Electricians	1 00	8
Painters	0 85	8
Plumbers	1 12½	8
Roofers	0 80	8
Concrete labourers	0 45	8
Unskilled labourers	0 40	8
Driver, team and wagon	0 70	8

Construction of buildings at the Radio Station, Regina, Sask. Name of contractors, Wilson & Wilson, Ltd., Regina, Sask. Date

of contract, August 9, 1930. Amount of contract, $15,616. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers and masons	$1 45	8
Plasterers	1 30	8
Plumbers and steamfitters	1 20	8
Electricians	1 10	8
Carpenters and joiners	1 00	8
Teamsters, team and wagon	0 90	8
Painters and glaziers	0 87½	8
Cement finishers	0 85	8
Felt and gravel roofers	0 80	8
Gasoline cement mixer engineer	0 70	8
Plumbers' and steamfitters' helpers	0 60	8
Plasterers' helpers	0 60	8
Cement layers and mixers	0 50	8
Common labourers	0 45	8
Truck drivers	0 45	8

DEPARTMENT OF PUBLIC WORKS

Contracts in Group "A" (Construction, etc.)

Construction of wharf repairs at St. Laurent, I.O., Montmorency Co., Que. Name of contractors, Napoleon Fournier of St. Ignace, Que., and Alex. Talbot, of Montmagny, Que. Date of contract, August 5, 1930. Amount of contract, approximately $9,569.50. A fair wages schedule was inserted in the contract as follows:

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Carpenters	$0 60	8
Blacksmiths	0 60	8
Blacksmiths' helpers	0 45	8

Overtime may be permitted in case of necessity on the basis of time and one-half.

Exceptions to the 8-hour day and overtime provisions will be recognized in preparatory and complementary work.

Construction of an extension to the breakwater at Breen's Pond, Antigonish, N.S. Name of contractor, Colin R. McDonald, Antigonish, N.S. Date of contract, July 27, 1930. Amount of contract, approximately, $7,650. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week
Carpenters	$0 60	9	54
Labourers	0 30	9	54
Driver, horse and cart (per day)	4 50	9	54
Driver, team and wagon "	7 00	9	54
Blacksmiths	0 60	9	54

Construction of an extension to the breakwater wharf at Ballantyne's Cove, Antigonish Co., N.S. Name of the contractors, Messrs. J. Arbuckle and G. Mason, Livingstone Cove, N.S. RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the Labour Gazette. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements, which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Non-Metallic Mineral Products

Toronto, Ontario.—Certain Monument Manufacturers and the Granite Cutters' International Association, Toronto Branch.

Agreement to be in effect from May 1, 1930, to May 1, 1932.

Only union members or those intending to join the union immediately will be employed. The agreement covers granite cutters, letterers, carvers, sand blast and surface machine operators, sawyers, tool sharpeners, polishers, composition workers and operators of all other machines that may be employed in cutting hard stone.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. Double shifts may be arranged on saws, second shifts to work 7 hours and be paid for 8 hours.

Overtime: no overtime to be worked except in case of emergency, but if overtime is worked, it will be paid at the rate of time and one-half. Work on holidays, time and one-half. Holidays to include Saturdays except in April, May, September and October.

Wages per hour: from May 1, 1930, to May 1, 1931, $1.10; from May 1, 1931, to May 1, 1932, $1.12½.

If day men are required to transfer to the night shift for part of a week, they will be paid at the night rate for the whole week.

Apprentices at cutting to be limited to one for every six journeymen and to serve three years. Apprentice polishers and apprentice gang sawyers to be limited to one for every three journeymen and to serve two years. Toolsharpeners' apprentices to serve two years with one apprentice allowed to every three journeymen.

Wages for apprentices: apprentices at cutting to be paid $3 per day of 8 hours for first six months, $3.50 for next six months, $4 for third six months, $4.50 for fourth six months, $5 for fifth six months, $6 for last six months. Wages for apprentice polishers to be paid at the same rate as the last two years for apprentice granite cutters. Wages for toolsharpeners' apprentices to be the same as apprentice polishers.

A toolsharpener's gang to consist of from ten to fourteen men, but if less or more than this number, $1 per man on gang to be paid.

Provision is made for the use of devices to keep down dust.

In case of any dispute, the matter will be referred to an adjusting committee consisting of two members of each party. If they fail to agree, they shall select a fifth party, the decision of this committee to be final and binding. No suspension of work will occur pending this decision.

Manufacturing: Printing and Publishing

LONDON, ONTARIO.—TWO NEWSPAPER PUBLISHERS AND THE INTERNATIONAL STEREOTYPERS AND ELECTROTYPERS UNION, LOCAL No. 115.

Verbal agreement to be in effect from January 1, 1930, to December 31, 1931.

This agreement applies only to stereotypers.

Hours: 8 per day, 4 on Saturdays, a 44-hour week for day work and 42 hours per week for night work.

Overtime: time and one-half; Sundays and holidays, double time. A bonus of $1 will be paid for a call back to work on the opposite shift.

Wages per week: day foreman $41, night foreman $40, journeymen $37 per week for both day and night work.

WINNIPEG, MANITOBA.—CERTAIN JOB PRINTING OFFICES AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL No. 191.

Agreement to be in effect from May 1, 1930, to October 31, 1930.

All journeymen employees, including foremen and proofreaders, must be union members.

Hours: 44 per week for day work and 42 per week for night work. If three shifts are worked, one will be 8 hours and the other two 7 hours each and these two will both be considered night work.

Overtime: time and one-half for first three hours and up to 6 o'clock on Saturdays. After these hours, double time to be paid. Nine hours to be the maximum overtime to be worked in one week, except in case of emergency. Double time for work on holidays.

Wages: job compositors, composing machine operators and proofreaders 90 cents per hour for day work and $1.04 per hour for night work.

Any union member may be eligible to learn to operate on machine, and if so employed will be paid the following wages per week: first three weeks $15 for day work or $18.75 for night work; second three weeks, $17.50 for day work or $21.25 for night work; third three weeks, $20 for day work or $23.75 for night work; fourth three weeks $22.50 for day work or $26.25 for night work; fifth three weeks, $25 for day work or $28.50 for night work. If the standard of competency is not obtained at the end of the fifth three weeks, the period of learning may be extended for two months.

One apprentice allowed each office and one for every five journeymen employed. All male copyholders and boys who set or distribute type to be considered apprentices. Apprentices to serve five years and to take the course in printing from the international union. Employers and chairmen of offices are to make quarterly reports to the local committee on apprentices, showing the progress of the apprentices and that they are instructed in all branches of the trade.

In monotype casting departments, one apprentice will be allowed for four casting machines or less and one additional apprentice for the next four machines or fraction thereof. During the second or third year of his apprenticeship, the apprentice will take a course at the monotype machine company's school.

Wages for regular and monotype caster apprentices: first half of third year, 50 per cent of journeymen's scale, second half 55 per cent, first half of fourth year 60 per cent of journeymen's scale, second half 65 per cent, first half of fifth year 70 per cent of journeymen's scale, second half 75 per cent.

The union reserves the right to refuse to execute struck work received from or destined for unfair employers or publications.

No strike, lockout, boycott or any other form of concerted action or interference with the usual operations of any department is to take place.

A joint standing committee will be appointed and maintained and all disputes will be referred to it. If unable to agree, the matter will be referred to a board of arbitration, consisting of one member of each party and a third chosen by them whose decision shall be final and binding.

Construction: Buildings and Structures

REGINA, SASKATCHEWAN.—ASSOCIATION OF CONSTRUCTION INDUSTRIES OF REGINA AND THE BRICKLAYERS, MASONS AND TILESETTERS' INTERNATIONAL UNION, No. 1.

Agreement to be in effect from March 25, 1930, to January 31, 1931.

Members of the union cannot work for contractors or any person who takes work by the thousand. All marble and tile work to be done by members of the union and all contractors subletting to sub-contractors who do not employ members of this union shall be considered unfair to the union.

Hours: 8 per day, 4 on Saturdays, except beyond five miles from the city when working on Saturday afternoons will be optional. On out of town work, 9 hours per day may be worked.

Overtime: no overtime except in cases of emergency. Work between 5 p.m. and 7 p.m., time and one-half; all other overtime and all work on Saturday afternoons and holidays, double time. No work on Labour Day.

Wages per hour for journeymen bricklayers and stonemasons: $1.45. Foremen to be paid at least 10 cents per hour extra.

When three or more men are employed, one of them will be foreman.

On out of town work, transportation and travelling time up to 8 hours to be paid.

Employers will not advertise for nor in any way cause to be brought into the local jurisdiction men belonging to other locals of the union, until it is decided necessary at a joint committee meeting.

One apprentice will be allowed any recognized firm which has been in business for one year employing five union members. Not more than two apprentices will be allowed to work on one job unless 20 or more bricklayers are employed on it.

Any dispute will be referred to a committee consisting of three members of each party, whose decision shall be binding. No strike or lockout to occur until the matter in dispute has been brought before this committee for settlement.

Regina, Saskatchewan.—Association of Construction Industries of Regina and the Operative Plasterers' International Association, Local No. 393.

Agreement to be in effect from June 1, 1930, to May 31, 1931.

This agreement is similar to the one previously in force and summarized in the Labour Gazette, July, 1927, page 791, with the following exception:

Wages for journeymen plasterers: $1.40 per hour.

Regina, Saskatchewan.—Regina Association of Domestic, Sanitary and Heating Engineers and the United Association of Plumbers and Steamfitters, Local No. 179.

Agreement to be in effect from January 2, 1930, to December 31, 1930. The two parties will meet in November to negotiate a new agreement.

No union member to be allowed to negotiate any individual or private agreement other than this agreement.

Only union members to be employed. In rush season if no union members are available, extra help may be employed, but they will be under union supervision and will be laid off as soon as the rush season is over.

Hours: 8 per day from 8 a.m. to 5 p.m. with one hour for lunch and Saturdays 4 hours from 8 a.m. to 12 noon. When a double shift is worked, other than the above hours, shift work will be paid at time and one-quarter. This applies to shift work only where two or more crews are engaged on the same work. No work will be done on new work on Saturdays from January 1 to March 31, but if all journeymen are working, a 44-hour week may be adopted by mutual consent. Men working out of town where no local union exists may work ten hours at single time on working days.

Overtime: overtime from 5 p.m. to midnight on other days and from noon to midnight on Saturdays, time and one-half; all other overtime including Sundays and legal holidays, double time.

Wages for journeymen plumbers and steamfitters: $1.25 per hour.

Not more than one apprentice at either trade for every three journeymen steadily employed and in no case will a steamfitter or plumber be allowed more than one helper.

Men working out of town will have their fare and board paid and travelling time up to 10 hours.

No union member shall be loaned or borrowed from one shop to another unless it is agreeable to committees of both parties.

In case of any dispute, the matter will be referred to a committee of three members of each party who shall have power to settle the grievance. No journeyman shall be dismissed or withdrawn from a job until such committee has met and rendered a decision.

Saskatoon, Saskatchewan.—Electrical Contractors' Association of Saskatoon and the International Brotherhood of Electrical Workers, Local No. 248.

Agreement to be in effect from May 1, 1930, to May 1, 1931, and from year to year until notice is given by either party 90 days before May 1, of any year.

This agreement is similar to the one previoously in effect and summarized in the Labour Gazette, September, 1929, page 1053, with the following exceptions:

It is agreed that no member shall work for an electrical contractor who is not a party to the agreement while there is a shortage of satisfactory union journeymen to supply the contractors who are parties to this agreement.

All work done after noon on Saturdays will be paid at time and one-half, except in case where concrete is being poured, in which case only the minimum rate will be paid.

Wages for apprentices: first six months $6 per week, second six months 25 cents per hour, second year 40 cents per hour, third year 60 cents, fourth year 70 cents.

Wages for journeymen electricians remain at $1 per hour.

Saskatoon, Saskatchewan.—Master Plumbers of Saskatoon and the United Association of Plumbers and Steamfitters, Local No. 264.

Agreement to be in effect from June 1, 1929, to May 31, 1931, and from year to year thereafter until notice is given by either party three months before May 31 of any year. When such notice is given, the joint committee will convene within 30 days and come to a decision.

Only union members or men eligible and willing to become members will be employed and union members will not work for anyone but a registered master plumber.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. On out of town work where no local union exists, ten hours per day may be worked at single time.

Overtime: overtime up to midnight including Saturday afternoons, time and one-half; all other overtime and work on Sundays and holidays, double time.

Wages per hour for journeymen plumbers and steamfitters: from June 1, 1929, to May 31, 1930, $1.25; from June 1, 1930, to May 31, 1931, $1.30.

One apprentice may be employed for each five journeymen employed.

For out of town work, fare and expenses to be paid and travelling time up to 12 hours in the day.

Any dispute will be referred to a committee consisting of three journeymen and three employers, said committee to meet within 48 hours and have power to settle such grievance and no journeymen will be dismissed or withdrawn from the job until this comomittee has met and rendered a decision.

CALGARY, ALBERTA.—CERTAIN CONTRACTORS AND THE BROTHERHOOD OF PAINTERS, DECORATORS AND PAPERHANGERS OF AMERICA, LOCAL NO. 583.

Agreement to be in effect from April 1, 1930, to March 31, 1931. Sixty days' notice to be given prior to expiration date of any desired change.

Employers are not to discriminate against union members. The union may appoint shop stewards who will not be discriminated against by employers.

Hours: 8 per day, 4 on Saturdays, a 44-hour week.

Overtime: time and one-half to midnight; all other overtime and work on Sundays and holidays, double time. In case of a night shift, men will receive 10 hours' pay for 8 hours' work.

Wages for journeymen painters: 95 cents per hour. Foremen to be paid 5 cents per hour extra.

One apprentice allowed to every four journeymen. Apprentices must be under 21 years when starting and will serve three years. The employer has the option of extending this term one year if he considers it necessary.

Men employed by any firm as maintenance men must not work on any contract work.

For work out of the city, fare, travelling time during working hours and an extra living expense allowance of 50 cents per day will be paid by the employer.

A standing committee consisting of three members of each party will be formed to settle all grievances and all matters connected with the betterment of the industry.

CALGARY, ALBERTA.—THE CALGARY ASSOCIATION OF SANITARY AND HEATING ENGINEERS AND THE UNITED ASSOCIATION OF PLUMBERS AND STEAMFITTERS, LOCAL NO. 496.

Agreement to be in effect from May 1, 1930, to April 30, 1931, and for another year unless notice of change is given by either party by February 28, 1931.

This agreement is similar to the one previously in effect and summarized in the LABOUR GAZETTE, September, 1928, page 1014, with the following exceptions:

Hours: The hours remain the same as before (44 hours per week) until December 31, 1930, but from January 1, 1931, to June 30, 1931, a five-day week will prevail, except that work will be permitted in case of emergency work, for which a permit must be secured from the business agent of the union.

Wages for journeymen plumbers and steam fitters: from May 1, 1930, to December 31, 1930, $1.20 per hour; from January 1, 1931, to April 30, 1931, $1.25 per hour.

EDMONTON, ALBERTA.—THE GENERAL CONTRACTORS' ASSOCIATION OF THE EDMONTON BUILDERS' EXCHANGE AND THE BRICKLAYERS, MASONS, MARBLE MASONS, TILE LAYERS, TERRAZZO AND MOSAIC WORKERS INTERNATIONAL UNION, NO. 1.

Agreement to be in effect from May 1, 1929, to April 30, 1931. A new agreement will be negotiated by a joint meeting of the parties in February, 1931.

Hours: 8 per day, 4 on Saturdays, a 44-hour week. When consecutive shifts are worked, 7½ hours shall constitute a day's work. On country work, 9 hours per day may be worked with work on Saturday afternoons optional.

Overtime: overtime up to 9 p.m., time and one-half; after 9 p.m. and all work on Saturday afternoons, Sundays and holidays, double time.

Wages for journeymen: bricklayers and masons $1.45 per hour; marble masons, tile layers and mosaic workers $1.35; terrazzo workers, $1 per hour. Foremen to receive at least 10 cents per hour extra.

For work out of the city, transportation and travelling time to be paid and 15 cents per hour extra to cover expenses.

If any dispute arises, a committee consisting of three members of each party will be appointed to settle it, the decision of this committee to be binding. No strike or lockout to occur until the matter has been brought before this committee.

EDMONTON, ALBERTA.—TWO EMPLOYERS AND THE WOOD, WIRE AND METAL LATHERS' INTERNATIONAL UNION, LOCAL NO. 205.

Agreement to be in effect from June 1, 1930, to May 31, 1931.

No solicitor will work alone on a job unless all journeymen are working. No solicitor will work for another solicitor.

The price of lathing to No. 1 lath $4.50 per thousand, No. 2 lath $5 per thousand. All churches, theatres, patchwork outside of houses to be day work and be paid at $1 per hour.

Overtime and Saturday afternoons, time and one-half.

For work out of the city, fare to be paid both ways.

EDMONTON, ALBERTA.—MASTERS' SHEET METAL ASSOCIATION AND THE INTERNATIONAL SHEET METAL WORKERS' ASSOCIATION, LOCAL NO. 371.

Agreement to be in effect from May 1, 1930, to April 30, 1932, and for another year unless notice of change is given by either party three months before April 30, 1932.

This agreement is the same as the one previously in effect which was summarized in the LABOUR GAZETTE, October, 1929, page 1161, with the following exceptions:

Apprentices who have served three years at the trade are called advanced apprentices instead of improvers.

Wages for journeymen sheet metal workers: from May 1, 1930, to April 30, 1931, $1.12½ per hour; from May 1, 1931, to April 30, 1932, $1.15 per hour.

VANCOUVER, B.C.—VANCOUVER FLOORLAYING CONTRACTORS AND THE UNITED BROTHERHOOD OF CARPENTERS AND JOINERS, LOCAL NO. 1875 (FLOORLAYERS).

Agreement to be in effect from May 1, 1930, to April 30, 1931. If a change is desired 60 days' notice must be given by either party.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE, October, 1929, page 1162, with the following exception:

Where there are more than two consecutive shifts, extra shifts shall receive eight hours' pay for seven hours' work. Where only two consecutive shifts are worked, or shifts are broken, the usual overtime rates will be paid.

Victoria, B.C.—Certain Electrical Contractors and the International Brotherhood of Electrical Workers, Local No. 230.

Agreement to be in effect from May 1, 1930, until either party gives 120 days' notice of change. If either party violates the agreement, it may be cancelled without notice, if the matter in dispute cannot be settled by arbitration.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette, April, 1929, page 454, with the following exceptions:

The second paragraph in the quotation from the agreement as given in that summary has been altered to read as follows: "That this agreement nor any agreement will be entered into by Local 230 by any person, firm or corporation who has not been regularly carrying on an electrical business within the jurisdiction of Local 230 as a licensed electrical contractor."

The standard rate of pay for journeymen to be $1 per hour from date of signing of this agreement until July 1, 1930, at which time the rate of pay shall be $1.10 per hour on a basis of a 40-hour week, provided however that such increase shall not apply to contracts already accepted or under construction. It shall be permissible for the contractors to employ a percentage of their men on necessary work on Saturday morning at the regular rate of pay, $1.10 per hour.

Wages for maintenance men: $180 per month.

Wages for apprentices: first six months 25 cents per hour, next three months, 30 cents per hour, last three months of first year 35 cents per hour, second year 40 cents, third year, 50 cents, fourth year and thereafter until they qualify as journeymen 62½ cents per hour.

The ratio of apprentices to journeymen shall never exceed one apprentice to one journeyman.

In the event of a strike of other building trades, electrical workers will not cease work until notified by the business agent of the union.

Victoria, B.C.—Master Painters of Victoria and the Brotherhood of Painters, Decorators and Paperhangers of America, Local No. 1119.

Agreement to be in effect from May 1, 1930, to April 30, 1931.

Hours: 8 per day from Monday to Friday, a 5-day week.

Overtime: time and one-half from 5 p.m. to midnight; double time from midnight to 8 a.m. Time and one-half on Saturdays from 8 a.m. to 5 p.m.; double time from 5 p.m. Saturdays till 8 a.m. Mondays. Double time for all work on Sundays and four holidays. No work on Labour Day.

Wages for journeymen painters and paperhangers: 85 cents per hour.

For country work, extra fare to be paid by employer, and if unable to return home each night, full board and room will also be paid.

No employer or workman will use intimidation or abuse in the exploitation of journeymen or apprentices in the development of competition or racing.

A standing committee consisting of three members of each party will be formed for the purpose of settling all grievances and taking up matters connected with the betterment of the trade.

Transportation and Public Utilities: Water Transportation

Montreal, Quebec.—The Harbour Commissioners of Montreal and the Independent Association of Harbour Employees of the Port of Montreal.

Agreement to be in effect from May 1, 1930, to May 1, 1931, for employees of the grain elevator system, construction forces, machine shop and shipyard, harbour yard shops, electrical department and cold storage plant, and to the close of the navigation season of 1930 for the other employees.

This agreement is similar to the one summarized in the Labour Gazette, September, 1927, page 1004, as amended and noted in the Labour Gazette, July, 1929, page 807, with the following further changes:

Grain Elevator System: Elevators 1, 2, 3 and "B": car dumper foreman, No. 3 Elevator 65 cents per hour, travelling grain loader operator 60 cents per hour.

Harbour Yard Shop and Guard Pier: foreman of metal trades omitted, plumber and steamfitter 63 cents per hour, air compressor operator 58 cents, sawmill engineer and derrick engineer both of guard pier 58 cents per hour, burner 55 cents per hour.

Locomotive Shop: air brake inspector (doing own work) 71 cents per hour.

Construction and Maintenance Forces: crane foreman, locomotive foreman, omitted; crane engineer, locomotive engineer 70 cents per hour, pavers and cement finishers 64 cents, shed mechanic 62 cents, pile driver engineer 58 cents, painter 53 cents, life saving equipment patrolman 50 cents, crane fireman and locomotive fireman 47 cents, water boy 20 cents, carpenter gang leaders on wharf repairs 69 cents.

Dredge Crews: craneman 65 cents per hour.

SS. *Sir Hugh Allan:* captain $184 per month, chief engineer $180, second engineer $155, mate $134, boatswain $79, oiler and wheelsman $68, fireman $64, deckhand $52.

Tug Crews: captain $139 per month ($158 on one tug), engineer $132, fireman $63, deckhand $51, cook $44 ($55 on one tug).

Drilling and Blasting Boat: blacksmith 68 cents per hour.

Harbour Yard Shop, Locomotive Shop and Guard Pier Employees: Shop employees working outside will work under the same conditions and hours as the regular outside forces.

Construction and Maintenance Forces: Fireman on locomotive cranes and works locomotives when watching on Sundays and holidays will be paid at fireman's rate, viz., 47 cents per hour. When a gang is called out on such days for repair work and the fireman forms one of the gang, he is to be paid time and a half at regular rate.

Derricks and Dredges: Hourly paid firemen when watching on Sundays and holidays will be paid at fireman's rate, viz., 47 cents per hour. When a gang is called out on such days for repair work and the fireman forms one of the gang, he is to be paid time and a half at regular rate.

General Conditions: When master mechanics, pay roll, shops, electrical linemen, electricians, locomotive crane operators and plumbers are called out and report for work between 9 p.m. and 5 a.m. on week days, they will be paid a minimum of five hours straight time.

PRICES, RETAIL AND WHOLESALE, IN CANADA, AUGUST, 1930

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month was again toward lower levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was $10.65 at the beginning of August, as compared with $10.91 for July; $11.63 for August, 1929; $11.08 for August, 1928; $10.93 for August, 1927; $11.10 for August, 1926; $10.84 for August, 1925; $10.19 for August, 1924; $10.53 for August, 1923; $10.44 for August, 1922; $11.44 for August, 1921; $16.92 for June, 1920 (the peak); $13.41 for August, 1918; and $7.68 for August, 1914. Of the twenty-nine items of foods twenty-one were lower, the most important declines occurring in the prices of potatoes, beef, veal, mutton, bacon, lard, milk, butter, bread, flour, prunes and sugar. The prices of fresh and salt pork and of eggs were slightly higher. Including the cost of fuel and rent with that of foods the total budget averaged $21.01 at the beginning of August, as compared with $21.26 for July; $21.90 for August, 1929; $21.31 for August, 1928; $21.11 for August, 1927; $21.32 for August, 1926; $21.05 for August, 1925; $20.57 for August, 1924; $21.03 for August, 1923; $20.88 for August, 1922; $21.98 for August, 1921; $26.92 for July, 1920 (the peak); $21.20 for August, 1918; and $14.41 for August, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, was again considerably lower at 84·1 for August, as compared with 85·8 for July; 98·1 for August, 1929; 95·4 for August, 1928; 102·1 for August, 1927; and 98·6 for August, 1926. One hundred and six prices quotations were lower, forty were higher and three hundred and fifty-six were unchanged.

In the grouping according to chief component materials seven of the eight main groups declined, while one showed a fractional increase. The groups which declined were: the Vegetables and Vegetable Products group, because of lower prices for barley, flax, wheat, flour, rubber and raw sugar which more than offset advances in the prices of corn, rye, bran and shorts; the Animals and their Products group, due mainly to lower prices for steers, lambs, canned salmon and beef hides, which more than offset advances in the prices of butter and eggs; the Fibres, Textiles and Textile Products group, because of lower prices for cotton, worsted cloth yarns and wool; the Wood, Wood Products and Paper group, because of decreased prices for certain lines of lumber; the Iron and its Products group, mainly because of lower quotations for scrap cast iron and steel tank plates; the Non-Ferrous Metals and their Products group, because of declines in the prices of aluminium, electrolytic copper and copper wire bars, which more than offset advances in the prices of silver, lead and antimony; and the Chemicals and Allied Products group, due mainly to price reductions for nitric acid, copper sulphate and shellac. The Non-Metallic Minerals and their Products group was slightly higher.

In the grouping according to purpose, both consumers' goods and producers' goods were lower, the former mainly because of reduced quotations for flour, potatoes, coffee, bakery products, woollen cloth and yarn. The decline in producers' goods was due to decreases in the prices of building and construction materials and for materials for the textile and clothing industries, for the furs and leather goods industries, for the metal working industries, for the meat packing industries and for milling and other industries.

In the grouping according to origin, raw and partly manufactured goods were substantially lower, because of declines in the prices of wheat, flax, barley, raw rubber, raw cotton, raw sugar, steers, lambs, raw wool, spruce, coffee and tin, which more than offset increased prices for raw silk, eggs, milk, silver, lead and antimony. Fully and chiefly manufactured goods also showed a slight decrease, due mainly to lower quotations for copper wire bars, nitric acid, flour, worsted cloth yarns and canned salmon, which more than offset increased prices for butter and cheese. Domestic farm products, articles of marine origin, articles of forest origin and articles of mineral origin were lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of August, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed

(Continued on page 1102)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

* Prior to 1926 number of commodities was 236.

(Continued from page 1094)

houses in some sixty cities throughout Canada. All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the LABOUR GAZETTE.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the LABOUR GAZETTE resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the LABOUR GAZETTE was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes

twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each month and published in the Labour Gazette since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the Labour Gazette a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the Labour Gazette, January, 1926, on Prices in Canada and in Other Countries, page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1928, and monthly since January, 1929. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141·4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9; 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.3; 1930, 65.5.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318) and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4; 1928, 127.8. Natural gas 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925,

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%.

179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

In beef prices the decline in evidence since July was continued, sirloin steak averaging 36·6 cents per pound in August, as compared with 37·5 cents in July; rib roast 29·1 cents per pound in August and 30·2 cents in July; and shoulder roast 22·5 cents per pound in August and 23·4 cents in July. Veal was also lower in most localities, the price being down from an average of 23·9 cents per pound in July to 23·2 cents in August. Mutton fell from an average of 30·8 cents per pound in July to 30·1 cents in August. Both fresh and salt pork were slightly higher, the former averaging 30·3 cents per pound in August, as compared with 30·1 cents in July, and the latter averaging 27·3 cents per pound in August, as compared with 26·9 cents in July. In fresh fish cod steak and halibut were slightly lower.

Fresh eggs advanced from an average price of 36·2 cents per dozen in July to 37·3 cents in August and cooking from 32·7 cents per dozen in July to 33·3 cents in August. Increases were reported from most localities. Decreased milk prices were reported from Sudbury and Moose Jaw. Dairy butter declined from an average of 32·9 cents per pound in July to 32·1 cents in August and creamery from 36·3 cents per pound in July to 35·5 cents in August. Cheese was somewhat lower at 31·4 cents per pound.

Bread was again slightly lower at an average of 7·5 cents per pound in August, as compared with 7·6 cents in July. Declines were reported from Bathurst, Hamilton, Windsor, Medicine Hat, New Westminster, Vancouver and Victoria. Flour also showed a slight decline, averaging 4·7 cents per pound. Potatoes were lower in most localities except in the Maritime Provinces. The price in the average was down from $2.62 per ninety pounds in July to $2.18 in August. Prunes declined from an average of 15·9 cents per pound in July to 15·6 cents in August. Granulated sugar was again lower at an average price of 6·6 cents per pound in August, as compared with 6·7 cents in July and 7·3 cents in January. Anthracite coal was practically unchanged in the average at $15.99 per ton. A decline in rent was reported from Woodstock.

Wholesale Prices

The following is a summary of a statement of wholesale prices change during the month issued by the Dominion Bureau of Statistics.

Wheat prices again moved to lower levels, No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, averaging 92·5 cents per bushel in August, as compared with 95·1 cents in July. This is the lowest monthly average recorded since July, 1914, and is 65½ cents per bushel below the corresponding figure for August, 1929. The prospect of excessive damage to United States crops from drought was said to be the cause of an advance at the beginning of the month but more favourable crop conditions developed and lower prices were recorded for the remainder of the month. Other grains, for the most part, averaged lower during August, western barley being down from 39·2 cents per bushel to 38·5 cents; flax from $1.79 per bushel to $1.62; and western oats from 43·8 cents per bushel to 40·2 cents. American corn advanced from 93·7 cents per bushel to $1 and western rye from 52·3 cents per bushel to 55·1 cents. Flour was down from $6.83 per barrel to $6.75. Bran and shorts at Montreal each advanced $3.16 per ton, the former to $27.93 and the latter to $28.93. Plain white bread at Montreal was down from 8 cents per pound to 7·3 cents and in Vancouver from 7·5 cents per pound to 6 cents. Raw sugar at New York fell from $1.25 per cwt. to $1·187, while granulated at Montreal was unchanged at $4.51 per cwt. Ceylon rubber at New York declined from 11·2 cents per pound in July to 10 cents in August. This price is roughly 50 per cent below quotations prevailing at the beginning of the year. Coffee, at Toronto, was 1 cent per pound lower at 18 cents. In livestock, good steers at Toronto declined from $8.13 per hundred pounds to $7.21 and at Winnipeg from $7.95 per hundred pounds to $5.96. Hogs at Toronto were down from $12.22 per hundred pounds to $12.05, at Montreal from $13.17 per hundred pounds to $12.01, while at Winnipeg a slight advance occurred from $11.08 per hundred pounds to $11.18. Lambs at Toronto were down from $12.22 per hundred pounds to $9.01. Creamery butter at Montreal advanced from 30·5 cents per pound to 31·4 cents and at Toronto from 30·9 cents per pound to 32 cents. Corresponding prices for August, 1929, were 41 cents and 42·9 cents per pound. Fresh eggs at Montreal advanced from 36·1 cents per pound in July to 38·6 cents in August. Raw cotton at New York declined from 13·103 cents per pound to 12·026 cents. The lower prices were said to be due to the relatively large world's visible supply and to the prospect of an average sized crop during the present year. Raw wool was 2 cents per pound lower at 15 cents. Spruce lumber declined from $36 per thousand board feet to $34. Fir timber and cedar boards were also down from $15 per thousand board feet to $14. Cast iron scrap was down 50 cents per ton to $14 and steel tank plates were also slightly lower at $1.60-$1.65 per hundred pounds. In non-ferrous metals electrolytic copper at Montreal fell from 13·30 cents per pound to 12·60 cents and tin from 32¼ cents per pound to 32 cents. Antimony and silver advanced, the former from $7 per cwt. to $7.25, and the latter from 34·384 cents per ounce to 35·226 cents. American anthracite coal at Toronto advanced from $12.92 per ton in July to $13.07 in August.

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases. The latest quarterly table giving wholesale and retail prices index numbers for various countries appeared in the LABOUR GAZETTE for July.

Great Britain

WHOLESALE PRICES.—The Board of Trade index number, on the base of 1924=100, was 71·7 for July, a decline of 1·2 per cent from June and of 13·3 per cent from July of last year. The food group was 0·3 per cent lower than in June, a decline in cereals being partly offset by slight advances in meat and fish and other foods. Non-foods were 1·7 per cent lower, every group contributing to the movement, the most marked fall being in textiles other than cotton and wool.

The *Economist* index number, on the base 1927=100, was 77·6 at the end of July, a fall of 1·5 per cent from the end of June and of 17·2 per cent from the end of July of last year. The food group was 2·4 per cent higher for the month, due chiefly to a seasonal increase in potato prices and also to increases in beef and butter, cocoa and maize; other foods were lower. Textiles, minerals and miscellaneous commodities were all lower than at the end of June.

The *Statist* index number (in continuation of Sauerbeck's figures) on the base of 1867-77=100, was 94·4 at the end of July. The following quotation is from the *Statist*, August 16, 1930: "This figure was 1·5 per cent lower than that for the preceding month and 18·1 per cent lower than that for the corresponding month of last year. In a little over two years sterling wholesale prices have slumped by 25.2 per cent. It might be noted that over the same period the cost of living figure has come down by 5·5 per cent, while the index number of wages compiled by Professor Bowley shows a reduction of only 1·75 per cent. These figures throw considerable light on our present difficulties."

As compared with the end of June, vegetable foods had advanced owing chiefly to a seasonal increase in the price of potatoes and a small increase in maize due to reports of the drought in America. Animal foods were lower and the group "sugar, coffee and tea" also declined and is now below the pre-war price level. Among industrial materials, there was a slight increase in minerals, while textiles declined 6·6 per cent owing to lower prices for cotton and jute; sundries were slightly lower.

COST OF LIVING.—The index number of the Ministry of Labour, on the base July, 1914=100, was 157 at August 1, an advance of 1·3 per cent over July 1. This advance was caused by an increase of 2·1 per cent in the food group due principally to seasonal increases in the prices of eggs, butter and potatoes. Clothing was slightly lower than at July 1, while rent, fuel and light and sundries were unchanged.

France

WHOLESALE PRICES.—The index number of the General Statistical Office, on the base July, 1914=100, was 549 for July, an advance of 0·9 per cent over June. This was due to increases in both vegetable and animal foods. The three groups of industrial materials were all lower than in June.

Germany

WHOLESALE PRICES.—The index number of the Federal Statistical Office, on the base 1913=100, was 125·1 for July, an increase of 0·5 per cent over the previous month. Agricultural products were 4·6 per cent higher, advances being found in all groups; in the animal food group this advance amounted to 10·5 per cent. Industrial raw materials and semi-manufactured goods were 2·1 per cent lower, every group contributing to the movement with the exception of a slight increase in coal.

COST OF LIVING.—The official index number, on the base 1913-1914=100, was 149·3 for July, an advance of 1·2 per cent over June. Food was 2·2 per cent higher, rent 0·2 per cent and heat and light 0·5 per cent. Clothing declined 0·8 per cent, while sundries were unchanged.

British India

WHOLESALE PRICES.—The index number of the Labour Office, Government of Bombay, on the base July, 1914=100, was 127 for June, as compared with 130 in May. Foods were slightly lower due to decreases in cereals and pulses, while sugar and other foods were higher. Non-foods were lower due to declines in all groups with the exception of a considerable increase in hides and skins. Raw cotton showed a decline of 35·7 per cent from May.

COST OF LIVING.—The index number of the working class cost of living in Bombay, on the base July, 1914=100, was 140 for July as compared with 141 in June. There were no marked changes from June; cereals and pulses declined, while other foods were higher; clothing was slightly lower, while fuel and lighting and house rent were unchanged.

United States

WHOLESALE PRICES.—The Bureau of Labour Statistics index number, on the base 1926=100, was 84·0 for July, a decline of 3·2 per cent from June. With the exception of housefurnishing goods which were unchanged, all of the ten groups were lower than in June, the greatest falls being in farm products amounting to 6·5 per cent and in foods amounting to 4·6 per cent.

The *Annalist* index number, on the base 1913=100, was 122·8 for August, a decline of 0·2 per cent from July. With the exceptions of small increases in farm products and fuels, all groups were slightly lower than in July.

Bradstreet's index number, showing the cost of a list of 106 commodities, was $10.4253 at September 1, showing a decline of only 0·2 per cent from August 1. Of the 13 groups included, six advanced, six declined and one was unchanged. Food products were higher as the result of crop damage due to drought and heat, while textiles, hides and leather and oils declined.

The following quotation is taken from *Bradstreet's* of September 6, 1930: "The September 1 index number, while marking only a fractional decrease from August 1, shows a

decline of 10·7 per cent from January 1 of this year, a drop of 17·6 per cent from September 1 a year ago and of 21·5 per cent from September 1, 1928. Compared with the number on December 1, 1925, a decrease of 27 per cent is shown, while as compared with June 1, 1921, number, the decline is 1·8 per cent and the decrease from the peak of all time on February 1, 1920, is just 50 per cent. The September 1 number, in fact, is the lowest recorded since November 1, 1915, although still 19·7 per cent above the number recorded on August 1, 1914.

"As to what some of the past happenings have been it is worth noting that the famous decline of 1920-21 lasted from February 1, 1920, to June 1, 1921, seventeen months, during which there was a net decline of 49 per cent contributed by fifteen declines and one very slight advance. The September 1 number this year is as shown above, just 50 per cent below the high level of February 1, 1920, and a shade below the so-called deflation point of June 1, 1921. During the marked period of price weakness, from October 1, 1929, to September 1, 1930, there were eleven declines, aggregating about 18 per cent, but if the high point of December 1, 1925, is taken as a base, a decrease of 28 per cent is found."

COST OF LIVING.—The index number of the Department of Labour and Industries of Massachusetts, on the base 1913=100, was 154·2 for July, a decline of 0·5 per cent from June, and is the lowest index number recorded since June, 1918. As compared with the previous month, the prices of foods, clothing and sundries were lower, while the fuel and light group was higher and shelter unchanged.

IMMIGRATION TO CANADA DURING THE FOUR MONTHS ENDED JULY 31, 1930

THE accompanying tables, compiled from information supplied by the Department of Immigration and Colonization, show the nature and extent of immigration into Canada during the four months ended July 31, 1930, with comparative figures for the corresponding period in 1929. Out of a total of 58,273 immigrants 19,317 or 33 per cent were British, 12,075 or 21 per cent were from the United States, 11,109 or 19 per cent were of Northern European races and 15,772 or 27 per cent were from other countries.

REPORT OF OVERSEA SETTLEMENT COMMITTEE FOR 1929

ACCORDING to the Report of the Oversea Settlement Committee for the year 1929, the total number of British settlers who went overseas in that year, under the Empire Settlement Act, was 72,213, as compared with 47,855 in 1928. The total of 72,213 includes 37,140 persons who sailed to Canada at the special £10 ocean passage rate which has been granted by the British North Atlantic steamship lines, as from January 1, 1929, for British subjects normally resident in Great Britain and Northern Ireland proceeding from this country to Canada for the purpose of permanent residence in the Dominion. The number who sailed for Canada with assisted passages under the Empire Settlement Act in 1929, was 21,615, as compared with 24,889 in 1928, and with 27,113 in 1927.

The following Table shows the total sailings under the Empire Settlement Act to the several Dominions in each of the years 1927, 1928, and 1929:—

Dominion	1927	1928	1929
Canada	27,113	24,889	58,755
Australia	29,136	20,603	11,525
New Zealand	4,446	2,175	1,849
South Africa	221	181	84
Total	60,916	47,855	72,213

It will be seen that, while there was a large increase of emigrants to Canada in 1929, there were further great reductions in the number of emigrants to Australia and to New Zealand. The emigrants to Australia were little more than a third, and those to New Zealand less than a sixth, of the numbers in 1926. The total number of departures under the Empire Settlement Act from 1922, when the Act came into force, to the end of 1929 has been 369,766.

The combined effect of the £10 passage rate to Canada and of the restrictions imposed by

the Canadian Government, as from January 1, 1929, on the immigration of single men from certain foreign countries has been to produce a great change in the proportion of British to foreign immigration into Canada during the year. Whereas the immigrants into Canada from Great Britain increased from 55,848 in 1928 to 65,716 in 1929, the number from foreign countries (other than the United States) fell from 81,001 in 1928 to 64,378 in 1929.

The report refers to the hindrances to migration into each of the Dominions in 1929—in Canada, an abnormally poor harvest, accompanied by financial depression and a stringency in the employment market; in Australia, a serious drop in the price of wool, a shortage in the wheat crop, and severe unemployment throughout the Commonwealth; in New Zealand, conditions which, though showing a steady improvement, necessitated the continuance of a partial embargo on assisted migration.

Special attention has been given by the Oversea Settlement Committee to the encouragement of the migration of women. During 1929, for the first time since the passing of the Empire Settlement Act, the number of women who received assisted passages under the Act exceeded the number of men (14,047 against 12,801). This is exclusive of the men and women (23,000 and 10,000 respectively) sailing to Canada under the £10 passage rate.

The report mentions that more consideration is now being given to the opportunities abroad for well educated girls. A recent investigation in Canada by the secretary of the Society for the Oversea Settlement of British Women shows that there are good opportunities for young women of good education in that Dominion, if they are willing to adapt themselves to new conditions and to work their way up.

Reference is made in the report to the facilities now existing in this country for the preliminary testing and training of intending settlers (men, women, and boys).

Under the Widows, Orphans, and Old Age Contributory Pensions Act, 1929, pensioners under the Contributory Pensions Acts are now entitled to receive their pensions while they are in any part of the British Empire; and insured persons who emigrate to any part of the Empire may keep up their insurance for pensions as voluntary contributors. These provisions came into force on January 2, 1930.

Immigration Regulations in France

The French Minister of Labour recently issued instructions laying down the procedure to be followed by persons who have entered the country without permission to take employment, and who subsequently desire to obtain work.

A considerable number of foreigners enter France each year as ordinary travellers, and after remaining in the country some time obtain employment as paid industrial workers. There is no legislation in force which requires foreign workers entering France to obtain special permission from the immigration authorities, although this is done by the great majority of immigrants. The Labour Market Protection Act, however, regulates the employment of aliens in France, and, among other provisions, makes it an offence to employ an alien who does not possess the necessary documents, including a licence to work for hire. Any person who employs an alien must see that the latter possesses an identity card in which he is described as a worker. These cards are issued by the Government Department concerned, after approval of the contract of employment and inspection of documents identifying the worker. In the great majority of cases these formalities are carried out before the alien worker enters France, or at the time of entry.

As regards persons who obtain employment after entering France, the instructions which have now been issued by the Ministry of Labour provide that an application for a worker's identity card must be submitted to the proper quarter, accompanied by certain information which must be entered on a special form, a certificate from the employer and a medical certificate. The applicant is given a receipt for the documents. The employer's certificate must be endorsed by the local authorities and is valid for one month only. It must state the nature of the employment, the wage offered, and the period of engagement, which must be defined precisely and must not be less than three months or more than one year. The medical certificate must be made out on a special form. No medical certificate is required from aliens who have resided in France for three years, French women who have lost their nationality by marrying an alien, or the children under 18 years of age of foreign workers, provided that they entered the country in the company of their families or to join them, and have resided in France for one year, and that their parents are legally established in the country.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Workman Who Reports Defective Conditions Does Not Assume Risk

An employee in a sawmill in Nova Scotia sustained injury while operating a circular saw. He brought action against his employer for damages, alleging that the latter had negligently allowed the saw and its supporting frame to fall into disrepair and become unsafe, and that the apparatus was not provided with guards, as required by the Nova Scotia Factories Act. The employer denied the allegations as to negligence, and pointed out that if the saw and frame were in the condition alleged, they were so to the knowledge of the plaintiff, and that the plaintiff had voluntarily undertaken to operate them. He also pleaded that there was contributory negligence on the part of the plaintiff.

The Nova Scotia Supreme Court, which heard the case, found that there was a defect in the condition and arrangement of the machinery, and that Part II of the Workmen's Compensation Act (Revised Statutes of Nova Scotia, 1923, chapter 129) applied. Part II provides that in cases where an accident has been caused by the negligence of an employer, the injured employee may recover damages. The judgment quoted the following sections of Part II:—

87. (4) A workman shall not by reason only of his continuing in the employment of the employer with knowledge of the defect or negligence which caused his injury be deemed to have voluntarily incurred the risk of the injury.

88. A workman shall hereafter be deemed not to have undertaken the risks due to negligence of his fellow workmen, and contributory negligence on the part of a workman shall not hereafter be a bar to recovery by him or by any person entitled to damage under the Fatal Injuries Act, in an action for the recovery of damages for an injury sustained by, or causing the death of the workman while in the service of his employer, for which the employer would otherwise have been liable.

89. Contributory negligence on the part of the workman shall nevertheless be taken into account in assessing the damages in any such action.

In regard to the employer's contention that the workman voluntarily assumed the risk, the court found that the latter had on several occasions told the employer of the condition of the machine, and that he was assured that he could depend upon it.

"I am unable," the judge concluded, "to find that the plaintiff, in view of his continued protests voluntarily assumed the risk. The consent to run the risk must be proved by the defendant who invokes the maxim *volenti non fit injuria;* and I am of the opinion that it has not been proved in this case.

"The statute takes away the defence of contributory negligence on the part of the plaintiff, and that feature, therefore, cannot be taken into consideration under section 89 above quoted or under the Contributory Negligence Act, 1926 (N.S.), c. 3, if the latter has in fact any application to actions under Part II of the Workmen's Compensation Act."

Judgment was given the plaintiff for $731 and costs, the judge remarking that if Part I of the Workmen's Compensation applied to this case a considerably larger amount would be awarded to plaintiff.

—(*Leopold versus Wile* (Nova Scotia), 1930, *3 Dominion Law Reports,* page 445.)

Interpretation of "Total Disability"

A carpenter held two policies of insurance which provided that in case of his total and permanent disability the insurer would pay the face value of the insurance. In June, 1928, the premiums having been paid up to date, he sustained severe injuries in the course of his occupation as carpenter, the lower part of his body, including his legs and feet, being completely paralyzed. The policies contained the provision that in case the insured sustained the amputation of both legs the insurer would pay an indemnity as for total and permanent disability. In the present case the insurer refused to pay the indemnity, the claimant's legs not having been amputated.

The Superior Court of Quebec maintained the judgment of a lower court, holding that the insured was entitled to recover the specified indemnity on account of the permanent paralysis of both legs, even although the amputation in such a case is prohibited by surgical science. On this point the judgment stated as follows: "Although the policy by its terms mentions only the fact of amputation, nevertheless the juridical and true intendment of such provision in the policy is to accord to the assured the benefits specified not by reason of the mere fact of amputation of both feet, but by reason of the happening from some admissible cause of a condition in the feet which makes amputation to be imperative or proper, and for these reasons, namely:—

"1. If the wording alone of the policy were to be followed, and if the mere fact of amputation of both feet to give rise to the right, then the assured might voluntarily and without any proper cause, have his feet amputated and claim the benefit, nevertheless such an inter-

pretation should be placed upon these words of the policy as this proceeding on the part of the assured would be assimilable to suicide and would render the claim illegal (Civil Code, 2593);

"2. In the law of insurance of this province, in general, constructive total loss is assimilable to absolute total loss (Civil Code, 2522, 2585), and here it may fairly and rightly be said that plaintiff has suffered a constructive total loss of both feet, even of both legs."

—*Tremblay versus Prudential Insurance Company* (Quebec), 1930, No. 7-8, *Rapports Judiciaires (Cour Supérieure)* page 297.)

Determination of Average Weekly Earnings

A decision in reference to the assessment of the compensation payable to a workman who has been partially incapacitated by an accident, was rendered by the House of Lords on July 30. In 1927 the workman in the case sustained an accident in the course of his employment. After a period during which he was totally incapacitated, he resumed work for the same employer, but, owing to his partial incapacity, at a lower rate of pay. A question arose between the workman and the employer as to the amount which the former should receive under the section of the Workmen's Compensation Act which provides as follows:

"The weekly payment in case of partial incapacity shall be one-half the difference between the amount of the average weekly earnings of the workman before the accident and the average weekly amount which he is earning, or is able to earn in some suitable employment or business after the accident."

The employer contended that the length of the working week in the occupation followed by the workman after his accident was 5½ days, while the workman stated that his actual working time was 5 days per week.

The County Court Judge awarded the workman an amount that was based upon actual earnings before and after the accident. He said:—"I award the applicant a weekly payment equal to half the difference between the amount of his average weekly earnings before the accident and the average weekly amount which he is actually earning in his presnt suitable employment with the respondents. I refuse to assume that he is able to earn a hypothetical figure for a hypothetical week's work, which neither he nor his fellow workmen in the gauge department have any opportunity to undertake."

The Court of Appeal subsequently reversed the decision of the County Court, on the ground that 5½ days a week was the normal working time in the workman's later employment, and that "where a man was actually earning wages the compensation to which he was entitled was to be assessed by reference to the normal earnings under normal market conditions in that employment, and not by reference to his actual earnings in the conditions prevailing at the time."

The House of Lords restored the award of the County Court Judge, pointing out that the arbitrator was not bound to assess compensation on the basis of what the workman would have been earning if the conditions of employment in his occupation had been more prosperous than they actually were.

(*White versus London and North Eastern Railway Company* (House of Lords), 1930, *The Times*, Law Report, July 30, 1930.)

Weekly Half Holiday in British Columbia

In a test case which was heard in the Magistrate's Court at Victoria, British Columbia, the proprietor of a barber shop was fined the nominal sum of $5 under the provisions of the Weekly Half Holiday Act (Revised Statutes of British Columbia 1924, chapter 273), on a charge of having kept employees at work for more than 30 minutes after closing time. The magistrate pointed out that while one section of the Act provided that an employee must not be kept longer than thirty minutes after the closing time, another clause provided that a customer entering a shop before closing hours could be served. The contention of the defence was that customers had been in the shop before 1 o'clock. In the magistrate's opinion, since a "permanent wave" required from two to four hours' work, it would be possible for an employee to lose his whole holiday if forced to stay at work on such a task. In that event the whole effect of the Act would be lost.

Counsel for the defence, intimated an appeal would be made to the Supreme Court.

Mr. Netson R. Craig, K.C., chairman of the Saskatchewan Workmen's Compensation Board, recently called the attention of employers of labour in the province to certain sections of the Act which forbids employers to make any deductions from the wages of their workmen in respect to the accident fund and the provisions of medical aid. Section 19 expressly forbids deductions from wages in connection with the accident fund; while Section 48 (6) makes it unlawful to levy a contribution from the employee toward the expense of medical aid, except where such aid is given by an arrangement between the employer and employee which has been approved by the Workmen's Compensation Board.

THE LABOUR GAZETTE

PREPARED AND EDITED BY

THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 30] OCTOBER, 1930 [NUMBER 10

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

A MODERATE decline in the number of employees on industrial payrolls in Canada was shown at the beginning of September, according to returns received by the Dominion Bureau of Statistics from 7,334 firms, each with a minimum of 15 employees, representing practically every industry except agriculture, fishing, hunting and highly specialized business operations. These firms employed 1,023,633 persons, as compared with 1,042,441 in the preceding month. The employment index number (with the average for the calendar year, 1926, as the base=100), stood at 116·6 on September 1, as compared with 118·8 on August 1, 1930, and with 126·8, 119·1, 111·0, 106·2, 97·8, 94·2, 101·2, 94·8, and 89·8 on September 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922, and 1921, respectively. At the beginning of September, the percentage of unemployment reported to the Department of Labour by local trade unions was 9·3, compared with percentages of 9·2 at the beginning of August and 3·5 at the beginning of September, 1929. The September percentage was based on the reports received from a total of 1,630 labour organizations, with an aggregate membership of 196,048 persons. Reports received by the Department of Labour from the offices of the Employment Service of Canada indicated a substantial increase in the business transacted during the month of August, when compared with that of the previous month, but a marked decline from the transactions of August last year, there having been recorded during the month under review 36,572 vacancies, 52,945 applications for work, and 34,792 placements in regular and casual employment.

The average cost of a weekly family budget of twenty-nine staple foods was $10.38 at the beginning of September as compared with $10.65 for August; $11.64 for September, 1929; $11.15 for September, 1928; $10.87 for September, 1927; $10.94 for September, 1926; $10.81 for September, 1925; $10.28 for September, 1924; $10.46 for September, 1927; $10.94 for September, 1926; $10.81 for September, 1925; $10.28 for September, 1924; $10.46 for September, 1923; $10.28 for September, 1922; $11.82 for September, 1921; $15.95 for September, 1920; $16.92 for June, 1920 (the peak); $13.31 for September, 1918; and $7.83 for September, 1914. In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, continued to decline, being 82·5 for September, as compared with 84·1 for August; 97·3 for September, 1929; 95·4 for September, 1928; 97·1 for September, 1927; and 98·5 for September, 1926.

The loss in working time caused by industrial disputes in Canada during September was much greater than in the preceding month, and was also greater than the loss in September last year. The increase was due to dispute in various coal mines. Eleven disputes were in existence at some time during the month, involving 2,599 workers, and resulting in the loss of 13,452 working days. Corresponding figures for August, 1930, were: three disputes, 65 workers, and 484 working days; and for September, 1929, eleven disputes, 1,123 workers, and 12,145 working days.

Industrial Disputes Investigation Act

During September the Department received reports from the Board of Conciliation and Investigation appointed to deal with the disputes respectively between the Canadian National Railways and the officers and crews of the steamship "Prince Edward Island"; and between the Hydro-Electric Commission of Hamilton, Ontario, and its electrical workers. One new application for the appointment of a Board was received during the month. A full account of recent proceedings under the Act, including the text of the reports, appears on page 1126 of this issue.

Unemployment Relief Act, 1930

This issue contains an account of the measures so far taken by the Minister of Labour in giving effect to the provisions of the Unemployment Relief Act, 1930, which was passed at the special session

of Parliament of Canada last month (LABOUR GAZETTE, September, 1930, page 1050). The report includes the text of the Regulations under the Act, an account of the agreements drawn up between the governments of Canada and of the several provinces, and also of agreements between the Dominion and the principal railway companies for furthering undertakings tending to provide work for the unemployed.

Unemployment relief in New South Wales

Two acts, the Unemployment Relief (Tax) Act, 1930, and the Prevention and Relief of Unemployment Act, 1930, which were passed by the legislature of New South Wales and assented to in June, provide for the assessment and collection of an unemployment relief tax and the establishment of a council for the prevention and relief of unemployment, and an unemployment relief fund. The council, the membership of which includes the Colonial Treasurer, the Minister for Labour and Industry, the Minister for Local Government, and five members appointed by the Governor, is empowered to formulate and investigate schemes for the relief of unemployment, including the training of suitable unemployed persons, to recommend expenditure or loans from the Unemployment Relief Fund, and to co-operate with public bodies in relief schemes. The Governor is empowered to appoint committees of employers and workers in any trade or industry to consider means of increasing its industrial efficiency and to confer with the Council.

In works officially declared as being for the relief of unemployment all wages, hours, and mode, terms, and conditions of employment are to be such as the Minister for Labour and Industry may from time to time direct. Relief schemes initiated by the Council are to be financed from an unemployment relief fund to be opened within the Colonial Treasurer's accounts, into which are to be paid, in addition to such sums as Parliament may appropriate from other accounts, the proceeds of the unemployment relief tax levied at the rate of threepence in the pound on (a) the net assessable income of every person, other than a company, whose total income exceeds £80 a year, during the income year ending June 30, 1930; (b) the net assessable income derived by every company during the income year ending June 30, 1930; (c) the income from employment of every person, other than a company, who is paid at a rate of not less than thirty shillings a week, during the income year commencing July 1, 1930.

Income from pensions and certain other sources is exempt from the tax.

Control of technological unemployment

Facts for Workers, the monthly review published by the Labour Bureau, Incorporated, of New York City, discusses "Unemployment and its Remedies," in its issue for October. After dealing with the problems presented by the large class of persons who have been laid off without pay, by those working on short time and by seasonal employment, the writer proceeds to discuss the "technological unemployment" which is caused by improvements in machinery. He points out that "the only feasible attack on technological unemployment is to attempt to narrow as much as posible the lag between discharge and re-employment. This means, not fighting the machine, but controlling its rate of introduction, and in addition timing its introduction. To illustrate, suppose a new machine is invented which will displace ten workers, and that a factory can use ten of these machines. If it installs one machine a month and thus discharges ten employees a month over a period of ten months, there seems to be much less serious unemployment situation created than if it installs all ten machines simultaneously and throws 100 men on the labour market at one time. Furthermore, if the introduction of machinery were timed to coincide with periods of general business prosperity when cyclical unemployment is at a minimum, the problem, again, would be less aggravated than if machines were introduced during times when business is on the downgrade and cyclical unemployment on the rise."

The writer further suggests that working contracts ought to embody rules regulating the introduction of machines, both in respect to the time and rate of their introduction.

Shorter working hours as remedy for unemployment

In its issue for September the *Canadian Congress Journal,* the monthly magazine published by the Trades and Labour Congress of Canada, discusses the shorter working week as a partial remedy for unemployment. "Slowly but nevertheless surely," it is stated, "it is being recognized that with greater efficiency in production a curtailment of the hours worked by those actually engaged therein, and a wider spread effected, must ensue, if consumption of the commodities produced is to be equitably consummated. The International Federation of Trades Unions at their conference held re-

cently at Stockholm, formulated a policy urging the introduction of the forty-four hour week as a minimum demand. It was generally recognized by the delegates in attendance that that must be considered as a minimum only, inasmuch as there were a number of countries where industry had demonstrated its ability to meet the demands with a still lower standard of working hours. This attitude is fully in harmony with the policy that organized labour has consistently urged as a means of adjusting our financial and industrial equilibrium."

The *Journal* points out that the benefits of shorter working hours are now recognized not only by organized labour, but also by some of the leading economists, and quotes the recent statement of a German industrialist that "It is necessary to adjust working hours to the perfection of modern tools. The working hours of industrial wage earners must be fundamentally reduced from forty-eight to thirty-six hours." "It is obvious," the *Journal* continues, "that the immediate results would be the absorption of large numbers of unemployed who are now an unproductive burden upon the economic system. This in its turn will give all workers more leisure time—which, as we know by experience, creates new needs and thus new opportunities of work."

The bricklayers at Toronto affiliated with the Bricklayers', Masons', and Plasterers' Union, at a meeting held early in September, voted unanimously to adopt a three-day working week for the purpose of counteracting unemployment in the trade. The *Contract Record and Engineering Review* stated in its issue of September 10 that the movement has the support of the employing contractors, and Mr. Joseph Bamber, secretary of the Toronto local union, gives credit to the contractors for their share in devising the scheme. Mr. Bamber explained that the purpose of the three-day working week was to distribute employment more evenly among the members of the craft. About fifty per cent of the union bricklayers at Toronto, it was stated, were without employment when the plan was adopted. It was anticipated that the depression in the construction industry would not be prolonged, and that the three-day working week would therefore be a temporary arrangement.

50th convention of American Federation of Labour

The fiftieth annual convention of the American Federation of Labour opened at Boston on October 6, and had not concluded in time to permit a full account of the proceedings to be ready for this issue of the Labour Gazette. It is recalled that the "A.F. of L." originated in a labour congress which met at Pittsburgh on November 15, 1881. That congress was attended by 107 delegates, representing about 250,000 original workers. The organization thus created was named the Federation of Trades and Labour Unions, starting with an affiliation of eight national and international unions, 11 central bodies, and 42 local unions. There were no State federations of labour at that time. Dissenting assemblies of the Knights of Labour made up a part of the affiliates. At the annual meetings during the next four years the chairman and secretary were chosen from the delegates. A standing legislative committee was created, however, which functioned somewhat after the manner of the present Executive Council of the A.F. of L., but no salaried officers were elected. Samuel Gompers, a delegate from the International Cigarmakers' Union, was chosen vice-president of the first legislative committee, and later became the committee president. Very little progress was made during the five years that the movement operated under the title of the Federation of Trades and Labour Unions, most of the energy being expended in conflicts with the Knights of Labour. At the convention held in Columbus, Ohio, in 1886, there was a complete reorganization and the title was changed to the American Federation of Labour. Samuel Gompers was elected president at that convention.

First Aid instruction in Saskatchewan

Provision has been made by the Collegiate Board for providing classes in "first aid" at the Balfour Technical School at Regina. This class was established for the purpose of enabling employers in the Province to comply with the regulations issued by the Workmen's Compensation Board under the Act of 1929 (Labour Gazette, April, 1930, page 392). Regulation 27 is as follows:—

"Every employer having twenty-five (25) or more workmen usually employed shall provide and maintain in his factory, shop, warehouse or other place of employment or in each factory, shop, warehouse or other place of employment, if he has more than one, a room thereof which shall be available and suitable for use as a first aid room and which shall at all times be kept sanitary and in charge of a clerk, workman, nurse or other person who has taken a course in first aid to the injured."

At the conclusion of the course certificates will be given to students who are able to satisfy the Saint John Ambulance Association of their proficiency.

Canada Year Book for 1930

The Dominion Bureau of Statistics has just published the 1930 edition of this official statistical annual of the resources, history, institutions and social and economic conditions of the Dominion. The new Year Book contains many new features, including important new material on retail prices (LABOUR GAZETTE, March, 1930, page 344). The "Labour and Wages" section gives an analysis of the occupations of the people, based on the Census reports; a summary of the activities of the Federal and Provincial Departments of Labour; statistics of organized labour, fatal industrial accidents; workmen's compensation; strikes and lockouts; employment and unemployment; old age pensions; and a summary of recent labour legislation. Another chapter of this section deals with wages and the cost of living.

Among the more important special features incorporated in the present edition are the following: an article on the temperature and precipitation of Northern Canada; improved statistics of the operations of the Ontario Hydro-Electric Power Commission; an improved treatment of radio-telegraphy and radio-telephony; an enlargement of the banking chapter to include statistics of the profits and dividends of the banks; an enlarged treatment of government and other savings banks; an extension of the statistics of commercial failures. The appendix contains preliminary figures on immigration and trade for the fiscal year ended March 31, 1930.

The wide range of subjects dealt with in the Year Book may be seen in the main titles of the chapters, which are as follows: Physiography; History and chronology; Constitution and government; Population; Vital statistics; Immigration; Survey of production; Agriculture; Forestry; The fur trade; The fisheries; Mines and minerals; Water powers; Manufactures; Construction; External trade; Internal trade; Transportation and communications; Labour and wages; Prices; Public finance; Currency and banking; Loan and trust companies; Insurance; Commercial failures; Education; Public health and benevolence; Miscellaneous administration; Sources of official statistical and other information relative to Canada; The Annual Register, 1929.

It will be seen that the book is an indispensable work of reference for students of social and public affairs in Canada. The Canada Year Book may be obtained from the King's Printer, Ottawa, for $2.

British Trade Union Congress rejects family allowances

The recent decision of the Trade Unions Congress on the subject of family allowances is briefly described in the account of the proceedings on another page of this issue. A joint committee appointed by the General Council of the Congress to consider this question had submitted two reports: that of the majority favoured, and that of the minority opposed, family allowances. The Congress, on the recommendation of the General Council, endorsed the opinion of the minority. The latter report opposed the institution of a cash allowance for children to be paid directly to mothers. Leaving aside the question of the probably adverse effect of such a system upon wage negotiations and collective agreements, the minority believed that such an allowance would have to be an alternative to further development of social services; and that if the sum necessary to provide for such a system were to be raised, nothing would be available for developing the national health, education and pensions services. The available funds, in their view, would achieve far more valuable results in the form of improved health, education and other conditions of well-being for the children if expended in developing the social services than if spent in cash payments. The report expressed the opinion that all the funds available for social purposes, such as health, education, and other social services, should be spent in extending these services until they are completed, rather than in paying cash allowances. The committee therefore recommended that before any decision on family allowances is taken, provision out of public funds should first be made for a complete medical service for all children from birth to the school-leaving age; for a prenatal and post-natal maternity service, together with a cash payment for each child for the first year or two years after birth; for the raising of the school-leaving age, with adequate maintenance alowances during the additional year and for nursery schools for children up to the age of admission to elementary schools; for adequate healthy houses, and for the elimination of tuberculosis and the supply of pure milk.

Empire policy of Trade Union Congress

The British Trade Union Congress last month accepted the report of its Economic Committee in regard to development of the economic relations between the various members of the British Commonwealth of Nations. The report proposed that regular

economic conferences should be held every three or four years, at which representatives of Britain and the Dominions and colonies could discuss and consult upon the economic affairs of the Commonwealth. The delegates would be appointed by the Governments on somewhat the same lines that were adopted in the case of the World Economic Conference, 1927. They would consist of the Government officials concerned with economic and trade questions; representatives of industry, both employers and employed; and representatives of commerce, finance, shipping, and agriculture. The conferences, it was suggested, would observe continuity, and their function would be to evolve an economic policy for the British Commonwealth independently of party politics. An inter-Commonwealth economic secretariat would be created, on somewhat similar lines to the economic organization of the League. Its function would be to investigate economic questions and problems affecting the Commonwealth.

Old Age Pensions administration in Ontario

Dr. D. Jamieson, chairman of the Old Age Pensions and Mothers' Allowance Commissions of Ontario, explained the working of both these systems in a paper read before the Union of Canadian Municipalities at its annual convention at Hamilton last month. Referring to the number of old age pensioners in the Province Dr. Jamieson said:—

"The short experience which we have had with the administration of the act in the province of Ontario, where it has been in effect only since the first of November last, has been very satisfactory, and when it is considered we have had about 35,000 applications to deal with, and have already over 32,000 pensioners receiving monthly cheques, with practically no complaints or criticism from any source, we should certainly feel we have the machinery of the act in smooth and satisfactory working order.

"When the act was passed in Ontario, it was estimated we would have about 25,000 pensioners, but the number is far exceeding our expectations, and I now believe we will find it increased ultimately to exceed one per cent of the population.

"The population of people over 70 years of age varies considerably in the different provinces—for example—in the west, where the settlement has been of more recent date, it is considered more of a young man's country. In British Columbia and the Prairie provinces, the census shows there are about 18 over 70 in each thousand of their population; in Manitoba the percentage is somewhat higher, and in Ontario there are 35 in every thousand. In the Maritime provinces the number is much higher, and I understand a survey has shown 46 out of every thousand. New Brunswick does not show so many, but it is considerably higher than Ontario.

"The total number of pensioners on our Ontario list for the last month was 31,967 and the total amount paid out in pensions was $632,069.25, and while we have a death rate of over 300 each month, we have about 700 or 800 new applications, so we estimate there will be, when we reach the peak load, about 35,000 pensioners and a yearly roll in excess of $8,000,000, in adition to the cost of administration."

Recent statistics of Old Age Pensions in Canada are given on another page of this issue.

Workers' welfare movement in South Africa

The chief inspector of factories of the Union of South Africa, in his annual report for 1929, reviews the work accomplished during the ten years that have passed since the Factories Act became law in 1919. "Looking back over the last ten years," he says, "it is possible to judge the long strides which have been taken in this most important side of industrial operations. It is no exaggeration to say that, apart from one or two factories, welfare work, even in its most primitive form, was unheard of. . . . As the first period of registration expired, the worst type of factory was eliminated. Employers were persuaded, where possible, and required, when persuasion failed, to move to other premises. Plans for new factories included adequate cloakrooms and lavatory accommodation, and in some instances provision was made for lunch and recreation rooms. Factories were removed from the congested areas to spacious premises in the suburbs. The contrast of the old conditions, with the new factories which now exist, is almost impossible to describe. Some of the new factories have exceeded all expectations in the welfare provisions that are provided; recreation clubs, including tennis courts, cricket and football grounds are becoming a common sight.

"Another feature of this work is the almost complete revulsion of feeling which has taken place amongst manufacturers in regard to the rest interval. In 1919 the suggestion that workers be granted an interval in the morning or afternoon or both was treated almost with derision; to-day the opposite obtains; factories where this practice is not carried out are the exception, and occupiers agree that increased

efficiency is the direct result. In most cases workers finance their own tea clubs, but there are cases where the employers provide refreshments, and are satisfied that the money is well spent."

Stabilization plan of Proctor and Gamble Soap Company

The Proctor and Gamble Soap Company's "guaranteed employment" plan was noted in the Labour Gazette at the time of its establishment about seven years ago (August, 1923, page 829). This company has its factories at Hamilton, Ontario, and in various cities in the United States. Colonel William Cooper Proctor, writing in the September issue of the *Payroll* (Winnipeg), describes the system as follows:—

"Fundamentally," he says "our system of guaranteed employment is a rather simple one. It is based on a plan under which our factory employees are given a guarantee of full time work for not less than forty-eight weeks in each calendar year. We have only two requirements for the employee who participates in our guaranteed employment plan, and the principal one is that he or she must be a member of the Profit Sharing Plan. This qualification constitutes no hardship. Quite to the contrary—it is distinctly advantageous. The Proctor & Gamble Profit Sharing Plan is merely an easy method for the employee to own stock in the company and to accumulate a fund which eventually establishes his or her economic independence. The other requirement is that the employee must have been with us for at least six months before he is eligible. We do this because, naturally, it takes some few months for us to find out whether or not a man coming to work for us is the proper type, and to find out whether or not we want him as a permanent employee. This also works both ways, because it gives the employee a similar opportunity to make up his mind whether or not he wants to stay with us. . . .

"The guarantee plan was conceived several years ago and it came about in this way: Between boom periods and depression periods, there was found to be very little variation in the actual consumption of our products. We recognized the fact that there is a uniform consumption of our products month by month, and that it should be possible to work out some plan that would make for even and uniform production. We knew that the big factor in any man's life is his job—a steady job—a job where he can count on a weekly envelope for at least forty-eight weeks in the year. If a man could be sure of this, he could work out his life's problems with some degree of assurance, and it is simply common sense to remove the fear and uncertainty from a man's life. . . .

"Now, naturally, the working out of the plan was not easy. It meant, for instance, that we had to estimate our sales by brands for twelve months ahead. These estimates were broken up into forty-nine weeks of equal production. The company really counts on operating forty-nine weeks in the year, which is approximately the limit possible because of holidays and necessary shut-downs for large repairs. By dividing the production into forty-nine weeks it automatically gives us one week leeway in case it is necessary to take it, which insures the forty-eight weeks full run. As an example of how smoothly the plan is working in our case, during 1929 the estimate of production as set by our sales executives varied less than $\frac{6}{10}$ of 1 per cent from what was actually produced.

"In the seven years that the plan has been in effect, we have not decreased the schedule of production established for any year. True, it has been necesssary to erect more warehouses to take care of stocks which have accumulated and which will accumulate from time to time. For instance in an active buying period our dealers have a tendency to buy larger than the consumer consumption, and in a depressed period that dealer liquidates his stock, resulting in his buying less through the depressed periods than is actually consumed. However, if we estimate our sales properly, and if we use our warehouses to take up the slack when dealers are not buying evenly, the plan is feasible, but it does mean an investment in warehouse stocks of considerable money at certain periods of the year.

"We appreciate that our plan may not be applicable to all businesses, but we do believe that all plants should give consideration to the stabilized employment plan as applied to their own particular industry. A manufacturer may find that there is a portion of his labour that can be taken care of under such a plan. This would be a step in the right direction toward the steady employment of men, even though in some industries it may be operative with only sixty-forty or even twenty per cent of the force."

At the meeting of the Province of Quebec Safety League held at Montreal on September 19, the question of organizing an annual mid-winter conference for foremen and workers was referred to the Round Table Conference of the Industrial Section for consideration. It was announced that a Pulp and Paper section had been formed, and that a Metal and Chemical Section was under way.

The new Public Welfare Department of Ontario, to which reference was made in the last issue of the Labour Gazette (page 997), is to have charge of the administration of the provincial Old Age Pensions Act and the Mothers' Allowance Act. These Acts were formerly in charge of the Department of Health of the Province.

The Winnipeg Trades and Labour Council recently published the 1930 edition of its "Legislative Year Book," containing a synopsis of social and industrial legislation enacted in the Dominion and in the Province of Manitoba, together with information collected from various sources relating to the life of the people. The members of the Council are recommended "to study the various labour laws which more directly affect them in their daily life, and keep a copy of this book always on hand for ready reference."

The Government of Saskatchewan recently complied with a request that the province should join with the Province of Manitoba in setting up a competent commission of inquiry to investigate and report upon all matters relating to the welfare of blind persons in the two provinces. Accordingly by an Order in Council published in the *Saskatchewan Gazette*, August 23, a commission was issued to Mr. Olin H. Burritt, of Philadelphia, principal of the Pennsylvania Institute for the Instruction of the Blind, to conduct an inquiry into this subject in Saskatchewan.

The question of co-operation between school and factory was discussed at an industrial welfare conference held at Oxford during September. One of the speakers, a school inspector, recommended that, with a view to giving a direction to education, schools should have the opportunity of visiting factories and receiving explanations of industrial processes.

The Act respecting Mines and Mining, which was passed by the Legislature of Manitoba at its recent session (Labour Gazette, June, 1930, page 654), to take effect on proclamation, has been proclaimed as being effective as from July 15, 1930.

Profit-Sharing in Great Britain in 1929

Statistics issued recently by the Ministry of Labour show the position of profit-sharing and co-partnership in Great Britain in 1929. Altogether 486 firms or societies had schemes in operation, and as nine firms have each two schemes the full number of schemes is brought up to 495. The total number of workpeople entitled to participate is 260,000. Particulars of the working of schemes are not always available, but the average amount per head of the bonuses paid last year under 410 schemes (including schemes in operation although no bonus was earned) was £9: 10s: 2d., or 4·8 per cent of average earnings. This is the highest average bonus (but not the highest percentage of wages) recorded in the Ministry of Labour statistics, that go back to 1913.

Fewer than half the workpeople employed by firms with profit-sharing schemes were participants in their benefits. The 321 firms had 499,000 workpeople, of whom the schemes embraced 229,000. In the preceding year the number participating, or entitled to participate in the schemes then in force was 223,000 out of a total of 487,000 persons employed. The large proportion of non-participating workpeople is the result in part, of certain requirements for participation, such as the attainment of a specified age or employment with the firm for a minimum number of years; but to a much greater degree it is governed by the extent to which the workpeople are able and willing to deposit savings with the firm or to purchase shares in the undertaking.

The most usual type of scheme is the simple arrangement under which a cash bonus, representing a specified proportion of profits, is paid. In some cases the bonus rises or falls with the dividend on capital. Cash bonuses are paid in 40 per cent of existing schemes. In other schemes bonuses may be placed in a provident or superannuation fund, but more frequently they are invested on behalf of the employee in the capital of the undertaking. The bonus in the gas companies' schemes is often a percentage of wages varying inversely (as dividends usually do) with the price charged for gas, but in recent arrangements the bonus varies directly with the dividend or is a fixed percentage of the amount paid in dividends.

There were 136 co-partnership schemes in operation in 1929. Co-partnership schemes encourage employees to acquire capital in the undertaking with which they are connected, and thus to obtain some share in the control. In addition there were 35 schemes in which a definite part (usually one-half) of the bonus is capitalized.

At the end of last year 165 co-operative societies had definite profit-sharing schemes, and practically all the 32,000 workpeople participated.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation throughout Canada was reported by the Superintendents of the Employment Service of Canada at the end of September to be as follows:—

In Nova Scotia most of the harvesting is completed and farmers report an excellent grain crop. The apple crop is smaller but the fruit of better quality. There is very little demand for farm help. The salmon fishing season which closed towards the end of the month was one of the most successful in the history of the industry. Bank fishermen are about all in but report a fair season only. There has been little activity in the logging industry. Coal mines were operated on fairly steady time with large quantities of coal hoisted and shipped. Manufacturing establishments with the exception of steel and car plants at Trenton all reported conditions favourable. Confectioners are busy preparing for the Christmas trade. Building construction is being rushed to completion in New Glasgow. Very little activity is reported from Halifax and as a result many workers are unemployed. There is a falling off in passenger traffic. Freight transportation was fairly heavy. The demand for domestics and charworkers continued and many placements were made.

The grain harvest in New Brunswick has been completed and good crops are reported from the northern districts. Farmers are now busy gathering their root crops. Catches of fish have been scarce owing to unfavourable weather. There was a plentiful supply of fresh fish. There is no demand for woodsmen and very little information as to prospects for the winter in the logging industry. Business was good for breweries, food manufacturers and pulp mills. There was no improvement in other manufacturing establishments. Good progress was reported in several building construction contracts which provided employment for a large number of workers. Road construction is nearing completion. Transportation was about normal with the usual seasonal decline in passenger traffic. Both retail and wholesale trade is good. There was a good demand for domestic and casual workers with sufficient applicants to fill all positions offered.

Although the demand for farm workers had declined at offices in the Province of Quebec, Montreal was still making a number of placements. Employment conditions in the logging industry have improved, orders for bushmen coming in steadily and many placements being made. The manufacturing industries do not show much improvement. The most encouraging reports are from Sherbrooke where conditions are stated to be good although cotton mills are on part time only. Manufacturing in Quebec City is active. There is an improvement in the boot and shoe industry in Montreal. Textile and clothing factories in this city are also active but the printing trades are not very busy. Hull reports that factories are running with reduced staffs. Although there are quite a number of buildings in the course of erection, the demand for help is not brisk. Street paving is providing employment for large numbers of workers in Montreal. Several contracts are under way in Hull and Quebec, but there is little activity among building tradesmen in Sherbrooke. Trade in Montreal continues active but moderate conditions only prevail in Quebec and Sherbrooke. There has been a curtailment in orders for domestics. Applicants were numerous and could not be readily placed.

In Ontario the demand for farm help had become light with plenty of applicants, experienced and otherwise, available for this work, Silo filling and picking fruit and potatoes have provided jobs of short duration. A number of potato pickers were placed by the Fort William and Port Arthur offices. Logging operations promised to be on a much reduced scale this coming season and will by no means afford sufficient employment for the large numbers of bushmen who follow this trade. Pulp cutting has taken a lot of men for work at Iroquois Falls and the Port Arthur office has made a fair number of placements. The demand for log makers and general bushmen continues good at Sudbury and North Bay. There is very little demand for mine workers. Canning is the only manufacturing industry that shows marked activity at present. Other industrial concerns show no improvement, further staff reductions having taken place in some plants and others are not taking on any new help though old hands are in some cases being rehired. Notwithstanding this, a feeling of optimism is gaining ground and indications of a revival of factory work is indicated, particularly in Guelph where the situation looks much brighter. Building activity is reported from Kitchener, Kingston, Ottawa, Guelph and Sudbury. In other centres work is drawing to a close and no new projects are being commenced. A considerable number of building mechanics

have been placed at Sault Ste. Marie but there as elsewhere there is not enough work to absorb all the unskilled. Relief work on sewers has been undertaken in several places and some highway construction is still proceeding. There is a shortage of cooks-general but sufficient applicants to meet the demand for all other classes of domestic workers. Applicants for casual work are considerably in excess of the demand.

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

		1930			1929		
		September	August	July	September	August	July

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

A decreased demand for farm workers was reported by Offices in Manitoba with large numbers of applicants available. Several women were placed by the Winnipeg Office in casual employment as potato pickers. In the logging industry conditions were quiet. Manufacturing showed no improvement. Good progress was made on all buildings in the course of construction at Brandon but no new work developed. Other centres report little activity and prospects dull although there was an increase in the number of building permits issued for dwelling houses in Winnipeg. Trade was very quiet. Employment opportunities for domestic servants declined, while there was an increase in the number of applicants available.

In some districts in Saskatchewan threshing was finished but this work has been delayed by heavy rains in the districts served by offices at North Battleford, Prince Albert, Swift Current and Yorkton. The demand for farm workers, however, has decreased generally and lots of applicants are available. Farmers in the Estevan zone are not doing any fall ploughing. Lumber companies in the Prince Albert district anticipate a curtailment of logging operations during the coming season. Building construction is practically at a standstill but highway and railway construction are being carried on in few centres. There is little demand for female domestic workers and although a few country orders were unfilled, there were plenty of applicants available at all offices.

As in Saskatchewan threshing operations in Alberta had been considerably curtailed owing to heavy rains but with fine weather this work will be completed in a few days in all districts except that served by the Edmonton office where a great deal of threshing has still to be done. Although there is very little demand for workers in the logging industry at present it is expected that conditions will improve during the coming winter. The coal mines are gradually adding to their crews but so far the outgoing tonnage is comparatively small. There is very little building in progress except at Calgary and Edmonton. In the former two large buildings have outside work nearly completed and it is expected that interior work, particularly for plasterers, will be available shortly. Extensions and reconditioning on the Northern Alberta Railways are still absorbing a great number of men and this work will continue until December. The manufacturing industries are very quiet. Retail trade is improving but wholesale trade is slow. There is a falling off in the orders for female domestic workers with no shortage of applicants.

Several offices in British Columbia report a severe frost has killed most of the tomato plants and a number of workers were thrown out of employment in consequence. Apple picking is in full swing and as the crop is good lots of help is employed. A few orders are being filled for farm work during the winter. There is not much activity in the logging industry. Any orders for workers are easily filled as there is a large surplus of help available. The mines at Kimberley are maintaining their output and coal mines at Nanaimo have taken on a few additional workers. Other centres report the situation as quiet. There is a large surplus of labour available for this class of work. Building construction showed a slight improvement although some contracts were nearing completion. Activity in road maintenance and construction was maintained. Trade generally was quiet. Work on the water front at Vancouver continues brisk but no extra help is required. Less activity in longshore work was reported by Prince Rupert. There is a shortage of cooks-general but a surplus of all other classes of female domestic workers.
ofwhhelp

EMPLOYERS' REPORTS

There was a slackening of industrial activity at the beginning of September, when the 7,334 firms who reported to the Dominion Bureau of Statistics showed a combined working force of 1,023,633 persons, as compared with 1,042,441 in the preceding month. The index number (average calendar year 1926 = 100) stood at 116.6, as compared with 118.8 on August 1, 1930, and with 126.8, 119.1, 111.0, 106.2, 97.8, 94.2, 101.2, 94.8 and 89.8 on September 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

All except the Prairie Provinces reported contractions, that in the Maritimes being most pronounced. In the Maritime Provinces, the reduction was chiefly in construction, particularly highway construction, but manufacturing and transportation also released employees, while mining and communications were busier. In Quebec, there were losses, in manufacturing, construction, logging and communications, but transportation was brisker. In Ontario, manufacturing as a whole employed fewer operatives, and logging, communications, construction, transportation and trade also showed curtailment. In the Prairie Provinces, mining, transportation, construction and trade afforded more employment, but manufacturing was slacker, notably in the iron and steel and lumber divisions. In British Columbia, there was a decline in employ-

ment, chiefly in construction, while manufacturing, transportation and trade reported improvement.

An analysis of the returns by cities shows that employment advanced in Windsor and the adjacent Border Cities, Winnipeg and Vancouver; in Quebec practically no general change was noted, while in Montreal, Toronto, Ottawa and Hamilton, curtailment was registered. In Montreal, manufactures showed general contractions, but improvement was indicated in transportation and construction. In Quebec, gains in manufacturing were largely offset by losses in construction. In Toronto, manufacturing, construction and trade recorded lowered activity, while only small changes were noted in other industries. In Ottawa, declines were recorded in manufacturing and construction. In Hamilton, manufacturing and construction reported contractions. In Windsor and the adjacent Border Cities, automobile plants afforded greater employment, but construction was not so active. In Winnipeg, manufacturing recorded a reduction, but improvement was noted in construction. In Vancouver, increases in personnel were reported in manufacturing and retail trade, while shipping was slacker and only small changes took place in other groups.

Within the manufacturing group in the Dominion as a whole, there were declines in iron and steel, lumber, pulp and paper, rubber, mineral and edible animal product factories, while the vegetable food, textile, electrical apparatus, fur and non-ferrous metal divisions recorded improvement. Coal, mining, transportation, building and railway construction and trade also reported increased employment. On the other hand, logging, communications and highway construction showed curtailment, that in the last named being particularly noteworthy.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of September.

Trade Union Reports

Employment for local trade union members was maintained in practically the same volume during August as in the previous month, the 1,630 unions from which reports were tabulated, with a total of 196,048 members, showing 9.3 per cent of idleness, compared with 9·2 per cent in July. Fluctuations, however, occurred in the various provinces, Nova Scotia, New Brunswick, Manitoba, Saskatchewan, and Alberta unions all indicating slight employment advances and the remaining provinces some reduction in the volume of work available. None of the changes, however, were of a noteworthy character. All provinces suffered curtailment of employment from August of last year when 3.5 per cent of the total membership reported were without work, Quebec and Ontario unions showing recessions which affected the greatest number of workers.

A more detailed article, with tabular statements, on unemployment among local trade unions at the close of August, 1930, will be found elsewhere in this issue.

Employment Office Reports

During the month of August, 1930, the offices of the Employment Service of Canada made 36,027 references of persons to positions and effected a total of 34,792 placements. Of these, the workers placed in regular employment numbered 24,909, of which 20,627 were men and 4,282 women. Those placed in casual work totalled 9,883. Applications for work were received at the offices from 40,319 men and 12,626 women, a total of 52,945, while vacancies reported numbered 36,572, of which 27,341 were for men and 9,231 for women. A substantial increase was shown in the volume of business effected when the above figures were compared with those of the preceding month, but a marked decline was recorded from the transactions of August last year, the reports for July, 1930, showing 26,150 opportunities for employment, 42,024 applications made, and 25,293 placements effected, while in August, 1929, there were recorded 55,254 vacancies, 61,317 applications for work, and 51,313 placements in regular and casual employment. A report in detail of the work of the offices for the month of August, 1930, may be found elsewhere in this issue.

Building permits and contracts awarded

According to the monthly report, prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during August, 1930, was $13,817,745, as compared with $15,730,964, in the preceding month and with $21,582,221 in August, 1929.

According to the *MacLean Building Review*, contracts awarded during September totalled $32,407,100. (Construction, during the nine months, all types, has decreased 19 per cent from the same period of 1929. Buildings only have decreased 28·2 per cent). Of this total, $11,293,600 was for engineering purposes; $10,319,100 was for business buildings; $8,449,500 was for residential buildings, and $2,344,900 was for industrial purposes. The apportionment of the contracts awarded during September, by provinces was as follows: Quebec, $14,156.200; Ontario, $10,762,900; Saskatchewan, $2,166,800; British Columbia, $1,842,000;

Manitoba, $1,700,900; Alberta, $946,700; New Brunswick, $604,500; Nova Scotia, $179,100; Prince Edward Island, $48,000.

Production and Trade

Industrial Production. Figures showing the volume of production in certain industries during recent months and also in the corresponding months last year, are shown in the table on page 1121.

The *Monthly Review of Business Statistics*, published by the Dominion Bureau of Statistics, states that the business recession was carried farther during August, when industrial operations after seasonal adjustment were at a lower level than at any time since the reaction began more than one year ago. The official index of industrial production was 152·9 in August compared with 161.1 in the preceding month. Among the industries which were more active in the month under review was the construction group, which obtained a greater amount of new business in August than in July. The flour and sugar industries also were more active in the last period for which statistics are available. After seasonal adjustment, the output of automobiles showed a slight gain from the low level of the preceding month. Imports of crude petroleum were in heavier volume, indicating heightened activity in the petroleum refining industry. The production of newsprint showed decline, suggestive of the unsatisfactory nature of the demand in external markets. The primary iron and steel industry showed considerable contraction in operations during August.

Canadian coal mines produced 1,100,814 tons of coal during August, a falling-off of 17·2 per cent from the five-year average for the month of 1,314,191 tons. Bituminous coal raised during August amounted to 886,406 tons, sub-bituminous coal, 56,755 tons and lignite coal, 157,653 tons. The output in Nova Scotia was 536,585 tons, in New Brunswick, 16,831 tons, in Saskatchewan, 19,236 tons, in Alberta, 388,307 tons, and in British Columbia, 139,855 tons. Coal imported during the month totalled 1,800,598 tons as against the 1925-1929 average for August of 1,917,501 tons. Anthracite coal imports amounted to 367,753 tons, made up of 52·5 per cent from the United States 33·1 per cent from Great Britain and 14·4 per cent from Russia. Canada imported 1,432,587 tons of bituminous coal during August; receipts from the United States accounted for 98·9 per cent of this total. Shipments of lignite coal from the United States during the month were recorded at 258 tons. Exports of Canadian coal amounted to 88,341 tons, an appreciable advance over the August five-year average of 71,477 tons. Increased tonnages exported to Newfoundland accounted for the advance. Coal made available for consumption in Canada during August totalled 2,813,071 tons, a decrease of 11 per cent from the 1925-1929 average for the month of 3,160,215 tons. Canadian coal included in the current month's total amounted to 1,012,473 tons.

External Trade. A summary of Canadian trade by the Department of National Revenue shows that in August, 1930, the merchandise entering Canada for consumption amounted to $77,906,294 as compared with $84, 550,935 in the preceding month and with $111,630,924 in August, 1929. The chief imports in August, 1930, were: Iron and its products, $16,269,347; Non-metallic minerals and products, $14,517,221; Fibres, textiles and textile products, $11,976,602.

The domestic merchandise exported during August, 1930 amounted to $69,290,228, as compared with $76,407,506 in the preceding month and with $96,264,517 in August, 1929. The chief exports in August, 1930, were: Agricultural and vegetable products, mainly foods, $21,869,618; Wood, wood products and paper, $19,325,133; Animals and animal products, $7,381,374.

Strikes and Lockouts

The time loss due to industrial disputes in September, 1930, was very much greater than that occurring during August, 1930, when no dispute of any magnitude was reported. The number of workers involved also showed a corresponding increase. As compared with September, 1929, the figures for September, 1930, show that, although the same number of strikes and lockouts occurred during the month as compared with the same month last year, there were over twice as many workers involved, with a resulting increase in time loss. Three strikes of coal miners throughout Canada, involving substantial numbers of workers, accounted for the greater part of the increase. There were in existence during the month eleven disputes, involving 2,599 workers, and resulting in a time loss of 13,452 working days, as compared with three disputes, involving 65 workers and resulting in a time loss of 484 working days in August, 1930. In September, 1929, there were on record eleven disputes, involving 1,123 workers and resulting in a time loss of 12,145 working days. At the end of the month there were two disputes recorded as strikes or lock-

outs, involving approximately 1,400 workers. These figures do not include those strikes and lockouts in which employment conditions were no longer affected but which had not been formally called off, or lapsed.

Prices

The average cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average retail prices in some sixty cities was again lower at $10.38 at the beginning of September, as compared with $10.65 for August; $11.64 for September, 1929; $11.15 for September, 1928; $10.87 for September, 1927; $10.94 for September, 1926; $10.81 for September, 1925; $10.28 for September, 1924; $10.46 for September, 1923; $10.28 for September, 1922; $11.82 for September, 1921; $15.95 for September, 1920; $16.92 for June, 1920 (the peak); $13.31 for September, 1918; and $7.83 for September, 1914. Of the twenty-nine foods included in the budget twenty-one were lower, the most important declines being in the prices of potatoes, beef, veal, mutton, pork, bacon, cheese, bread, flour, rolled oats, evaporated apples, prunes and sugar. Prices of eggs, milk and butter showed seasonal advances. Including the cost of fuel and rent with that of foods the total budget averaged $20.75 at the beginning of September, as compared with $21.01 for August; $21.90 for September, 1929; $21.38 for September, 1928; $21.05 for September, 1927; $21.15 for September, 1926; $21.02 for September, 1925; $20.65 for September, 1924; $20.97 for September, 1923; $20.90 for September, 1922; $22.37 for September, 1921; $26.38 for September, 1920; $26,92 for July, 1920 (the peak); $21.11 for September, 1918; and $14.33 for September, 1914. Fuel and rent were practically unchanged.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, continued toward lower levels, being 82·5 for September, as compared with 84·1 for August; 97·3 for September, 1929; 95·4 for September, 1928; 97·1 for September, 1927; and 98·5 for September, 1926. In the classification according to chief component materials six of the eight main groups were lower, while two were slightly higher. The Animals and their Products group and the Non-Metallic Minerals and their Products group advanced, the former because of higher prices for milk, butter, eggs, bacon, ham, hides and calf skins, which more than offset lower prices for canned salmon, raw furs, steers and lambs, and the latter mainly because of higher prices for coal. The groups which declined were: the Vegetables and Vegetable Products group, due to lower quotations for grains, flour, bran, shorts and rubber; the Fibres, Textiles and Textile Products group, due to lower prices for raw cotton, cotton sheeting, jute, hemp and sisal; the Wood, Wood Products and Paper group, because of lower quotations for pulp and fir flooring; the Iron and its Products group, due to declines in the prices of steel tank plates, automobile body plates and steel sheets; the Non-Ferrous Metals group, due to reduced prices for copper, brass, lead and zinc, which more than offset somewhat higher prices for antimony, silver and imported copper wire bars; and the Chemicals and Allied Products group, due to lower prices for aluminium sulphate.

Farm Labour in Ontario

Crop Bulletin 184, published by the Ontario Department of Agriculture, gives the following information concerning the farm labour situation in the Province in the last week of August:—

Labour is available over all farming sections. Men are glad to get $2 a day (without board in some cases); and though farm wages run below and above this the figure is given in many reports as an average rate; $40 a month with board. No difficulty is experienced in obtaining labour. One correspondent says: "It is a new experience for me to turn good men off the verandah." In areas where special crops create harvesting demand, $2.50 a day and board make the standard as against $1.50 in other places. For steady jobs with board, lower wages are arranged than for some years have obtained. In general present rates of wages as in other years depend on experience and ability; but it is noticeable this year that the supply of experienced labour is fairly ample. A Perth correspondent makes the observation applicable to other places as well: "Any number of men around looking for work." In eastern counties wages were quoted anywhere from $25 to $50 a month with board. In Durham and Northumberland experienced men were offering at $30 and immigrants at much lower wages. Help everywhere seems plentiful, except domestics for housework, who are as hard to obtain as before, where they have not wholly disappeared. In regard to experience and ability while farm labourers are a varied enough class there is little variety to the inexperience which the farm woman (when she rarely gets the chance to engage a girl) must be satisfied with.

PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT DURING THE MONTH OF SEPTEMBER, 1930

DURING the month of September reports were received in the Department of Labour from two Boards of Conciliation and Investigation established to deal with disputes between (1) Canadian National Railways and certain employees comprising the officers and crew of the ss. *P. E. Island,* being engineers, mates, quartermasters, deck hands, firemen, etc., members of the Canadian Brotherhood of Railway Employees, and (2) the Hydro-Electric Commission of the City of Hamilton and certain employees, members of Local Union No. 138, International Brotherhood of Electrical Workers.

Application Received

During September an application for the establishment of a Board of Conciliation and Investigation was received in the Department from certain employees of the Paramount Famous Players Corporation, being members of the Montreal Musicians Protective Association, Local 406 of the American Federation of Musicians. The dispute related to a proposed agreement and particularly to the clause providing for its cancellation. The application stated that the number of employees affected was forty directly and seventy indirectly. In this case a Board of Conciliation and Investigation could be established only by mutual consent of the parties concerned, and as joint consent was not received no action was taken looking to the establishment of a Board. The contract for the musicians in one theatre expired on August 31 and no musicians were employed from that date. The musicians in three other theatres ceased work on September 12. After direct negotiations between the parties a settlement was effected. Reference to this dispute will be found in the article on Strikes and Lockouts appearing elsewhere in this issue.

Other Proceedings

A summary of the report of the Board of Conciliation and Investigation which dealt with the dispute between the Hydro-Electric System of the Corporation of the City of Winnipeg and certain of its employees being linemen and cable splicers appeared in the LABOUR GAZETTE, December, 1929 (p. 1333). The dispute related to the men's request for the abolition or modification of the agreement governing appointment in the city's service, which prevented the applicants from associating themselves with a trades union organization. The report was unanimous and recommended that the city allow the employees concerned freedom of association, and that the employees pledge themselves not to join in any sympathetic strikes; also that the union undertake not to call out their members on a sympathetic strike. Whether such modification of the agreement should relate to the applicants only, or extend to all classes of employees, was left to the decision of the City Council. On September 3, 1930, the City Council passed a resolution rescinding the so-called "Slave Pact" in respect to all civic employees.

Mention was made in the LABOUR GAZETTE, March, 1930, of the receipt of an application for the establishment of a Board of Conciliation and Investigation from the employees of the Sydney and Louisburg Railway (a subsidiary of the British Empire Steel Corporation). Ninety-one employees were stated to be directly affected by the dispute, the classes involved being freight handlers, baggagemen, trackmen and clerks, members of the Canadian Brotherhood of Railway Employees. The dispute grew out of the employees' request for increased wages and minor changes in working conditions. Through the mediation of the Chief Conciliation Officer of the Department negotiations between the disputants were entered into and an amicable adjustment was effected. The terms of the agreement are outlined on another page of this issue.

Final Report of Board in Dispute Between Canadian National Railways and Certain of Its Employees on the Railway Car Ferry, ss. *P. E. Island*

Reference was made in the August issue of the LABOUR GAZETTE to the receipt in the Department of an interim report of the Board of Conciliation and Investigation established to deal with a dispute between the Canadian National Railways and certain employees being officers and crew employed on the Railway Car Ferry, ss. *P. E. Island,* members of the Canadian Brotherhood of Railway Employees. The request of the employees for a schedule of wages and working conditions and their demand to be represented in negotiations by a person of their own choice were stated to be the cause of the dispute. The

personnel of the Board was as follows: Professor Herbert L. Stewart, of Halifax, N.S., chairman, appointed on the joint recommendation of the other Board members, Mr. James Friel, K.C., of Moncton, N.B., and Mr. J. L. Cohen, of Toronto, Ontario, nominees of the employer and employees respectively. The final report of the Board, accompanied by a signed agreement between the parties, was received in the Department on September 16. The texts of the Board's report and agreement follows:—

Final Report

From Board of Conciliation and Investigation appointed to Examine the Dispute Between the Canadian National Railways and Employees on the Car Ferry "P. E. Island."

Presented to the Minister of Labour,
September 15, 1930.

The Conciliation Board appointed to enquire into this dispute is glad to be able to report that it has succeeded in bringing the parties together, and that an agreement governing wages and conditions of labour on the car-ferry "Prince Edward Island" was signed to-day, in presence of the Board, by representatives of the employer and of the employees. A copy of the schedule, thus adopted is appended to this Report.

This agreement, with a single exception, disposes of all points lately at issue between the parties. The matter on which it is not final arises out of the interpretation of Article 2, Clause (*c*), dealing with employees' representation. It is there provided that in future negotiations with the company the crew shall be represented by an "Employees' Committee." The representatives of the Railway have made it clear that this clause is understood by them to exclude any negotiator or spokesman for the crew who is not a member of the crew itself. This agreement is signed by the representatives of the employees in full consciousness that such will be the employer's interpretation. But in thus signing it, the representative of the crew made it plain that those for whom he acted had in no way abated their conviction that they should in justice have complete freedom to choose anyone they please—whether from their own membership or from outside—as negotiator with the company on their behalf. The reasonableness of this claim they still assert, and will continue to assert.

On this question the Board, after hearing and considering reasons on both sides, finds itself in agreement with the employees (Mr. Friel dissenting), and recommends that their right to unfettered choice of a negotiator should be recognized. The Board has reached this conclusion on the ground (*a*) that the negotiating of a complicated schedule calls for experience and knowledge which cannot fairly be expected from working members of a ship's crew; (*b*) that complaint, for example of grievances against the management of a ship cannot without embarrssment and difficulty be made by employees who must remain under the control of those they have to blame; and (*c*) that, in general, as set forth in the well-known judgment of the Chief Justice of the United States on May 26, 1930, collective action on the part of employees would lose its principal value "if representation were made futile by interference with freedom of choice."

Respectfully submitted,

(Sgd.) Herbert L. Stewart,
Chairman.

(Sgd.) J. L. Cohen

(Sgd.) James Friel, (dissenting as to the right or advisability of interference through the Canadian Brotherhood of Railway Employees or any other union with the command, management or affairs of a Government vessel.)

(Sgd.) J. F.
Members of Conciliation Board.

Montreal, September 15, 1930.

CANADIAN NATIONAL RAILWAYS—ATLANTIC REGION

Rules and Rates of Pay of Employees on Car Ferry SS. "P.E. Island"

Article 1

Agreement between Canadian National Railways and Employees herein specified of Car Ferry "Prince Edward Island" operating between Borden, P.E.I. and Tormentine, N.B.

Article 2.—Discipline and Grievances

(*a*) An employee who has been in the Service more than three months shall not be suspended (except for investigation) discharged or disciplined until given a fair and impartial hearing.

An employee may have the assistance of a fellow employee at an investigation if so desired and on request shall be furnished with a copy of his own statement if made a matter of record at the investigation.

The employee so affected shall be given one (1) day's notice of an investigation but this shall not be construed to mean that a proper officer who may be on the ground at the time when the cause for investigation occurs, shall be prevented from making an immediate investigation. A decision shall be rendered within fifteen (15) days from date of suspension.

An employee found blameless in the matter under investigation, if suspended or dismissed, shall be reinstated and paid at schedule wages for time so lost one day for each twenty-four hours so held less any amount earned in other employment and if away from home shall on

production of receipts be reimbursed reasonable expenses for travelling to and from the investigation.

(*b*) If the decision is considered unjust an appeal may be made in writing to a higher officer by an employee within fifteen (15) days of the date decision is rendered; such appeal shall set forth the grounds upon which it is made. The hearing shall be granted within ten (10) days from the date appeal is received and the decision shall be rendered within ten days of completion of hearing.

(*c*) Should any employee subject to this agreement believe he has been unjustly dealt with or that any of the provisions of this agreement have not been complied with (which it is not possible to adjust directly) the procedure for adjustment shall be as follows:

First, by the employee to the officer immediately in charge, after that, appeal may be made through the employees' committee to the higher officers of the Company in their regular order.

(*d*) Committee of Employees will be granted transportation and necessary leave of absence without pay for adjustment of grievances.

(*e*) The time limits as provided in this Article may be extended by mutual agreement.

Article 3.—Free Transportation and Leave of Absence

(*a*) Employees will be granted free transportation and leave of absence in accordance with the regulations of the Company.

(*b*) Employees, at the discretion of the Railway, will be granted, not to exceed sixty (60) days, leave of absence, permission to be obtained in writing, and unless employees so furloughed report for duty on or before expiration of such furlough his name shall be taken from the Seniority roster and if he returns to work thereafter, such employee shall rank as a new employee, provided, however, such furlough may be extended by application in writing to the proper officer in ample time to receive permission or return to duty at the expiration of leave, or absolute proof furnished as to bona fide sickness preventing such return.

(*c*) Leave of absence under this rule shall not be granted for the purpose of engaging in work outside the Railway Service excepting in cases involving sickness or other exceptional circumstances.

Article 4.—Hours of Service

(*a*) Except as provided in Clauses (*b*) and (*c*) of this Article, ten (10) hours shall constitute a day's work for all employees covered by this Schedule, and time worked thereafter shall be considered as overtime and paid for at pro rata rate for the first two hours and time and one-half thereafter. Pro rata rate shall be based on 260 hours per month.

(*b*) Eight (8) hours shall constitute a day's work for carpenters, trimmers, firemen and water tenders and time worked thereafter shall be considered as overtime, and shall, for the first two hours be paid at pro rata rate, and thereafter at time and one-half. Pro rata rate shall be based on 208 hours per month.

(*c*) Employees notified or called to work not continuous with, before or after the regular work period, shall be allowed a minimum of one hour at pro rata time, and if held on duty in excess of two hours, time and one-half shall apply to such excess time. Time shall be counted as continuous from time required to report for duty until released from duty.

(*d*) Where practicable employees in any Department of the ship working one shift desire to work eleven hours per day before overtime commences in order to get one afternoon per week off duty this will be allowed.

Article 5.—Sunday and Holiday Work

(*a*) As far as practicable employees will be released from duty on Sunday. When required to remain on board ship will do so without extra remuneration, but when necessary to operate ship on Sunday overtime will apply if service continuous from midnight Saturday. If called for service from Borden on Sunday the minimum shall be a day's pay.

(*b*) Employees except those in the steward's department required to perform actual work on Sundays when boat is in dock will be paid a minimum day except where a full day's work is not performed when actual time worked will be paid for at pro rata rate with a minimum of one hour.

(*c*) An extra day's pay will be allowed to each member of crew actually on duty on the following legal holidays, viz: New Year's Day, Good Friday, Dominion Day, Labour Day, Thanksgiving Day and Christmas. When any of these holidays falls on Sunday the day observed by the Federal Government shall be considered the holiday.

(*d*) In computing broken time for employees, 260 hours per month in the case of those working a ten hour day and 208 hours per month for those working an eight hour day shall be the basis.

Article 6.—Attending Court

Employees taken away from their regular assigned duties at the request of the Management to attend Court or to appear as witnesses for the Railway shall be furnished transportation and will be allowed compensation equal to what would have been earned had such interruption not taken place, and in addition necessary actual expenses while away from home terminals. Any fee or mileage accruing shall be assigned to the Railway.

Article 7.—Relief Work and Preservation of Rates

Employees temporarily or permanently assigned to higher rated positions for one day or more shall receive the higher rate while occupying such positions. Employees temporarily assigned to lower rated positions shall not have their rates reduced.

This rule shall not apply to employees who are filling higher rated positions where the higher rated employees are off duty under pay.

Article 8.—Promotion and Seniority

(*a*) Employees having six months' service or over within the preceding twelve months shall be promoted in accordance with their ability and seniority in the service, the officers of the Company to be the judge of the employees' ability. Where a dispute arises as to the ability of an employee the matter may be taken up by the Committee as a grievance.

(*b*) New positions or vacancies shall be bulletined in the respective seniority groups i.e. deck, engineroom and steward's departments, for a period of five days. Employees desiring such positions will file their applications with the designated officer within that time and senior applicants (merit and ability being sufficient) shall be given preference in filling the positions.

Article 9.—Free Meals

All employees covered by this schedule shall receive their meals free of charge.

Article 10.—Vacations

Employees will be allowed vacation with pay for twelve working days provided they have had at the beginning of the calendar year at least one year of continuous service with the Railway in a position covered by this schedule.

Article 11.—Rates of Pay

	Per Month
Second Officer	$160
Third Officer	140
Second Engineer, Sr.	225
Second Engineer, Jr.	173
Third Engineer	153
Fourth Engineer	143
Oilers	98
Firemen	96
Water Tenders	98
Trimmers	81
Quartermaster	108
Second Steward	98
Mess Room Steward	73
Caterers	70
First Cook	143
Second Cook	95
Waiters	70
Deck Hands	98
Carpenter	113
Watchman	98

Article 12

This Schedule of Rules and Rates of Pay shall become effective October 1, 1930, and shall remain in effect until revised or superseded on thirty days' notice from either party.

Article 13

It is understood and agreed that should any of the provisions of this agreement conflict with the Government Vessels Discipline Act the latter would apply if necessity arose.

For the Company
(Sgd.) W. U. Appleton.

For the Employees
(Sgd.) Russell MacDonald.

Report of Board in Dispute Between the Hydro Electric Commission of the City of Hamilton and Certain Employees, Members of Local No. 138, International Brotherhood of Electrical Workers

A unanimous report was received on September 23 from the Board of Conciliation and Investigation established to deal with the dispute between the Hydro Electric Commission of the City of Hamilton and certain employees, members of Local Union No. 138, International Brotherhood of Electrical Workers. The dispute related to the employees' request for an increase in wages, etc., forty-five employees being directly affected. The Board was composed of Mr. L. B. Spencer, K.C., of Welland, Ontario, chairman, appointed by the Minister in the absence of a joint recommendation from the other Board members; Mr. J. B. Carswell, of Hamilton, and Mr. Fred Bancroft, of Oakville, employer's and employees' nominees respectively. Prior to the establishment of the Board both parties agreed in writing to abide by its decision. Following is the text of the report of the Board and of the agreement recommended:—

Report of Board

In the Matter of Industrial Disputes investigation Act and Differences Between the Hydro Electric Commission of the City of Hamilton and Certain Employees, Being Members of Local Union No. 138 of International Brotherhood of Electrical Workers.

The Honourable the Minister of Labour,
Parliament Buildings,
Ottawa, Canada.

Sir:—We have the honour to inform you that the Board of Conciliation appointed in connection with the above dispute held sessions on the 10th, 16th, 17th, 19th and 20th of September, at the Court House in the City of Hamilton.

The Hydro Commission were represented by Messrs. E. I. Sifton, A. W. Bradt and W. H. Childs, and the members of the Local Union No. 138 by Messrs. John Noble, S. Pettit and C. Starkey.

All parties to the dispute were given full opportunity to present arguments and to make such statements as would be helpful to the Board in arriving at a conclusion.

After giving due consideration to all statements and arguments, the Board unanimously agreed and joined in recommending that the agreement as to wages and conditions made between the parties on the first day of March, 1929, shall be restored and put into full force and effect, with the following amendments:—

Clause 1: By striking out "28th day of February, 1930," and inserting in lieu thereof, "28th Day of February, 1932."

Clause 9: By striking out "$150.00," and inserting in lieu thereof, "$155.00."

Clause 14: By inserting in place of "75 cents," "81 cents," and in place of "70 cents," "76 cents," and by adding thereto the words, "Foremen 10 cents per hour more than first class linemen or cablemen."

In all other respects the agreement of the first day of March, 1929, shall be in full force and effect until the 28th day of February, 1932.

We are pleased to attach hereto a copy of the new agreement to be entered into, with all the amendments included.

Dated at Hamilton, Ontario, this 20th day of September, A.D. 1930.

(Sgd.) Lynn B. Spencer,
Chairman.
(Sgd.) J. B. Carswell,
(Sgd.) Fred. Bancroft,
Members of Commission.

Agreement

This agreement entered into this day of Nineteen Hundred and Thirty, between the Hydro Electric Commission of the City of Hamilton and its employees, being members of Local Union 138, International Brotherhood of Electrical Workers.

Duration of Agreement

Clause 1.—This agreement shall take effect on First day of March, 1930, and remain in effect until 28th day of February, 1932, and thereafter until thirty days' notice of termination has been given by either party to this agreement.

Clause 2.—That the Hamilton Hydro Electric Commission will not discriminate against any of its employees because of their membership in Local Union 138, I.B. of E.W., and the Union, its officials or members will not discriminate against or interfere with any of the Commission's employees who do not belong to a union. In the event of a difference arising over the interpretation of this agreement, a grievance committee of the Union shall meet the Commission officials and adjust the matter. In case of failure to adjust the difference, no cessation of labour shall take place until the highest officials of both parties have met in an endeavour to arrive at a settlement and if no agreement is then reached both parties hereby agree that the matter be settled by arbitration.

Sub-Station Operating Department

Working Hours

Clause 3.—A week's work shall consist of eight hours per day, six days per week.

Sick Leave

Clause 4.—Upon satisfactory proof being submitted to the Commission, operators who are off work through sickness will be paid up to two weeks full pay in any one calendar year, in return for which, each operator agrees to work overtime without pay when required but not exceeding 96 hours per annum.

For overtime exceeding the above mentioned 96 hours time and a half will be paid up to twelve hours and double time for all over twelve hours continuous operation.

Seniority

Clause 5.—Seniority shall in all cases date from the time the operator last entered the employ of the Commission. If, in the opinion of the Commission, it becomes necessary, to reduce the staff, the latest operator taken on shall be the first laid off, other qualifications being equal.

Investigations

Clause 6.—Should any cause of complaint arise in connection with the working conditions or wages of any operator, he shall have the right, through the grievance committee of the Union, to appeal to the Commission, where evidence for both sides may be submitted; such investigation called for must be held within three days, Sundays and holidays not included, and if after such investigation the Commission shall decide that the employee has been unjustly dealt with he shall be reinstated to his former position and shall be paid for any time lost thereby.

Vacation

Clause 7.—All operators after having been in the employ of the Commission for one year shall receive two weeks vacation each year with full pay.

Chief Operator

Clause 8.——The Chief Operator shall not be permitted to be a member of the Union.

Salaries

Clause 9.—The following schedule of salaries shall be paid to date from March 1, 1930, and thereafter as per this agreement,

	Per Month
3 years experience or over	$155
2 to 3 years experience	130
1 to 2 years experience	115
Less than 1 year	100

Overhead Line Department and Underground and Cable Department

Working Hours

Clause 10.—The hours shall be 44 hours per week, from 8 a.m. to 12 noon and from 1 p.m. till 5 p.m. for the first five days of the week and from 8 a.m. till 12 noon on Saturdays.

Overtime

Clause 11.—From the end of the regular working day overtime shall be paid at the rate of time and one-half of the regular rate, for the first five hours, and double time thereafter until relieved. Double time shall be paid all employees required to work Sundays or statutory holidays.

Emergency Calls

Clause 12.—All men called out for work outside of the regular working hours, shall be paid for 3 hours as a minimum.

Clause 13.—The Superintendent and Foremen shall not be permitted to be active members of the union.

Rates of Pay

Clause 14.—

	Per Hour
1st Class Linemen	81 cents
2nd Class Linemen	76 cents
Cablemen	81 cents

Foremen 10 cents per hour more than first class linemen or cablemen.

Weather Conditions

Clause 15.—No time shall be lost owing to adverse weather conditions.

The Superintendent shall be the judge of such weather. Men called upon to work out in wet weather on trouble or emergency shall be provided with rubber coats, boots and hats.

Holidays

Clause 16.—All men in the line and cable department covered by this agreement shall be paid for Good Friday, Dominion Day, Labour Day and Christmas.

Defective Equipment

Clause 17.—No man is required to use defective equipment but is required to immediately report to the foreman any such defective

equipment. Safety first lectures to be arranged at times of adverse weather conditions.

Seniority

Clause 18.—Seniority shall in all cases date from the time the employee last entered the employ of the Commission. If in the opinion of the Commission it becomes necessary to reduce the staff the latest employee taken on shall be the first laid off, other qualifications being equal.

Safety

Clause 19.—Voltage over 600 volts shall be classed as high voltage and when men are working on high voltage work not less than two men shall be assigned to the job, and all linemen shall use rubber gloves on high voltage work, rubber gloves to be tested at least once every month.

Clause 20.—It is also agreed that clause 6 shall govern overhead line Department and underground Department.

SUMMARY OF PROCEEDINGS UNDER THE INDUSTRIAL DISPUTES INVESTIGATION ACT

THE tables presented below summarize the proceedings under the Industrial Disputes Investigation Act for the fiscal year ending March 31, 1930, and from March 22, 1907, to March 31, 1930.

TABLE I.—PROCEEDINGS BY INDUSTRIES FROM APRIL 1, 1929, TO MARCH 31, 1930

Industries affected	Number of applications for Boards	Number of Boards established	Number of strikes not averted or ended
I. Disputes affecting mines, transportation and communication and other public utilities—			
(1) Transportation and Communication—			
(a) Steam Railways	12	8*	0
(b) Street and Electric Railways	4	2	0
(c) Shipping	2	0	0
(d) Telegraphs	2	1	0
(2) Miscellaneous—			
Light and power	2	2	0
II. Disputes not falling clearly within the direct scope of the Act	4	1	0
Total	26	14	0

*In one case a board dealt with two applications.

The proceedings under the Act during the fiscal year 1929-30 include three cases in which certain proceedings had taken place during the preceding fiscal period. On March 31, 1930, results were still pending in connection with five applications.

TABLE II.—PROCEEDINGS BY INDUSTRIES FROM MARCH 22, 1907 TO MARCH 31, 1930

Industries affected	Number of Applications for Boards received	Number of strikes not averted or ended
I. Disputes affecting mines, transportation and communication, other public utilities and war work—

Organized Labour and the Industrial Disputes Investigation Act

In its suggested "reading course" in economics (LABOUR GAZETTE, May, 1930, page 485) the American Library Association included a book by Professor J. H. Estey, of Purdue University, of Lafayette, Indiana, entitled "The Labour Problem." In discussing existing methods of conciliation of labour disputes, Professor Estey makes an interesting reference to the Canadian Industrial Disputes Investigation Act, which, however, leaves on the reader the erroneous impression that the Act does not meet with the approval of organized labour in Canada. It is true that there was some uncertainty in labour opinion before the provisions of the Act were fully understood, but in recent years the views of labour as expressed by its responsible officials, have been uniformly favourable.

The attitude of organized labour to this statute in the early years was one of doubt, owing to the belief that it partook of the nature of compulsory arbitration and deprived workers of the right to strike. Reassured on these points, since the Act is one of compulsory investigation only, and prohibits strike and lockout only during the time necessary for investigation, the Canadian trade unions adopted a friendly attitude towards the Act which has been consistently maintained in recent years. There have been some difficulties in administration from time to time, such as are mentioned by Professor Estey, where several employers were involved in what appeared to be for all practical purposes the same dispute. The establishment of several boards in such a case was a cumbersome and expensive procedure and it was difficult sometimes to induce the different employers to take joint action in the establishment of a board of conciliation and investigation. This gave rise to some opposition on the part of labour unions involved in such disputes particularly during the war period. Accordingly, the Act was amended in 1920 to enable more effective procedure to be followed in these cases. Occasional critical statements have been made by representatives of organized labour, some of which were quoted in E. S. Furniss' book on Labour Problems, to which Mr. Estey refers. These statements were made at particularly difficult times for the unions concerned, and cannot be said to be the opinion of these labour bodies at the present time. Mr. Furniss quotes an approving comment from the Provincial Workmen's Association of Nova Scotia, and adds "but no recent utterance from them on this subject is available." The Provincial Workmen's Association of Nova Scotia was dissolved in 1917, its former members being now organized in District 26 of the United Mine Workers of America.

Early in 1925 the Industrial Disputes Investigation Act was declared *ultra vires* of the Dominion Parliament. Following this decision numerous resolutions were passed by labour organizations in Canada requesting the Dominion Government to take steps to bring about the amendment of the British North America Act, laying down the respective legislative powers of the Dominion and Provincial Legislatures, in order to confer on the Dominion Parliament power to enact such legislation as the Industrial Disputes Investigation Act. The Trades and Labour Congress of Canada at its annual conference, September, 1925, passed such a resolution. A similar resolution was passed by the Trades and Labour Congress in 1926.

In 1924, the representatives of the four railroad brotherhoods, including the Order of Railway Conductors, made the following statement in a letter to their representative in the Dominion Senate in supporting a Bill to amend the Act:—

"It is not necessary at this time to refer in detail to the history of the legislation or the chief reasons for its enactment. Suffice it to say that during the time the Act has been in operation labour has generally accepted the principles of the Act and has co-operated in giving effect to its chief purpose 'to aid in the prevention and settlement of strikes and lockouts in industries connected with public utilities.' Generally speaking, this co-operation has continued, notwithstanding the fact that for many years the measure did not find popular favour among a large number of the workers affected. However, believing that in the public interest some legislative machinery should operate to insure ample opportunity for investigation and conciliation in industrial disputes, labour has gradually adapted itself to the principles and legal process of the Act, and is further willing that it should be continued, provided that its operation is made equitable to all concerned. . . . .

"That the Act has not always been used equitably in the matter of disputes between employers and workmen, because of unfair advantage being taken by employers of an omission inadvertently made in section 58, thus enabling employers to force changed conditions of employment for reduction in wages, contrary to the spirit and intent of the Act, is a matter of common knowledge to those conversant with the operation of the Act, especially within the past four or five years.

"All that Bill 7 contemplates is to insure equality of advantage, as well as responsibility, under the operation of the Act. It cannot be consistently contended that any injustice or burden will be imposed upon the employer by the proposed amendment, unless

he violates the Act. The employer should not entertain any fear of referring to a Board of Conciliation and Investigation any proposed changes in wages or working conditions, before making them effective, especially in view of the fact that employees have accepted this obligation for the past fifteen years."

In January, 1929, the four railway brotherhoods presented to the Ontario Government a request that all industries within the province of Ontario should be brought within the scope of the Dominion Act. About the same time the executive committee of the Trades and Labour Congress of the province of Quebec asked the Quebec Legislature for similar legislation, pointing out that this legislation had worked out to the mutual advantage of both employer and employee. In February, 1929, the National Labour Council of Toronto which is affiliated with the All-Canadian Congress of Labour requested similar action from the Ontario Government. The Ontario committee of the Trades and Labour Congress presented a similar resolution to the Ontario Government a few weeks ago and the Labour Educational Association of Ontario adopted a similar resolution.

From the foregoing it is apparent that while the attitude of some representatives of Canadian labour to the Industrial Disputes Investigation Act has at times been doubtful, yet, on the whole, the trade unions have been friendly to the principles of the Act and have co-operated in its administration.

CANADIAN NATIONAL RAILWAYS EMPLOYEES' BOARD OF ADJUSTMENT No. 2

Summary of Recent Proceedings

REPORTS have been received of four cases recently settled by the Canadian National Railways Employees' Board of Adjustment No. 2. An account of previous cases was given in the Labour Gazette, August, 1930, page 904, and in previous issues. The issue of August, 1930, also contained a general summary of the proceedings of the Board, covering the period from January 1, 1928, to December 31, 1929; and a similar summary of proceedings from the date of the inception of the Board to December 31, 1927, appeared in the issue of October, 1928, page 1060.

The Canadian National Railways Employees' Board of Adjustment No. 2 was established for the purpose of disposing of outstanding grievances or disputes that might arise from the application, non-application, or interpretation of the schedule of working conditions for "Clerks and Other Classes of Employees as herein named," which are not adjusted between the officers of the railway and the representatives of the employees.

The members of the Board are appointed for a term of one year, subject to re-appointment, and it is composed of four members selected by the management and four members selected by the representatives of the employees concerned. The decisions of the Board are binding upon the parties to the agreement. Provision was made in the agreement constituting the Board for the appointment of an arbitrator in any case in which the Board might be unable to agree upon an award. Up to the present time in only one case has it been found necessary to appoint an arbitrator.

Case No. 60—Stores Department, Central Region.

A number of common labourers at London, Ontario, were assigned to perform labourers' work in connection with the dismantling of cars in a scrap yard near London. For this work they were paid at the rate of 35 cents an hour. The employees contended that as they performed the duties of scrap yard labourers in the dismantling of cars they were entitled to pay at the schedule rate of 42 cents per hour for the work they performed in that capacity, namely 42 cents per hour. The evidence submitted indicated that the work done by the employees was usually performed by scrap yard labourers, whose positions are covered by schedule rates. The Board sustained the claim of the employees.

Case No. 61—Operating Department, Central Region.

A car checker at Ottawa was requested by the yard master to assist him, during his busy period, in marking a "switch list" for the make-up of trains leaving Ottawa. The yard-master called the car numbers from the way bills, and the checker marked opposite the number on the switch list the destination called by the yard master. The switching operations were performed by the yard crew from the list thus prepared. Owing to the similarity in the numbers of two cars; the destinations "Toronto" and "Montreal" became transposed, with the result that both cars were sent to the wrong destination. Three employees received 5 demerit marks each in connection with this mishandling of cars. The

employees claimed that the checker should not have been held responsible for the errors.

The Board considered that the checker's responsibility in the matter had not been proven definitely, and decided that in his case the five demerit marks should be removed from his record, a "caution" being substituted.

Case No. 62—Operating Department, Central Region.

The position of rate clerk for "less than carload lots" (L.C.L.) having been bulletined as vacant at Ottawa, several employees applied, and the senior applicant A—was led to believe that he had been appointed to the position. The assistant superintendent, however, on learning that A — was senior applicant, intimated that this man had not the necessary qualifications. Later the company awarded the position to the third applicant on the list. The employees claimed that the removal of A — from the position was in violation of Article 3, Rule (E) of the schedule for "clerks and other classes of Employees," and that he should be promptly returned to the position and paid the difference in wages lost as the result of his improper removal. On the hearing of the case by the Board the company stated that this was one of the positions that previously had not been handled satisfactorily, trouble to patrons and loss to the company having been caused by the mishandling of business.

The Board decided that A — should be returned to the position and given a fair trial at the work, but disallowed the claim for the payment of "back-time."

Case No. 63.—Purchasing Department, Atlantic Region.

The position of voucher clerk in the office of the superintendent of the Sleeping and Dining Car Department at Halifax, was transferred to the office of the purchasing agent at Moncton, who promoted a messenger to perform the work. The employees contended that an employee from the Halifax office should have been transferred to Moncton. The company pointed out however that it did not appear to be necessary to transfer a clerk for the purpose, only a relatively small portion of a clerk's time being taken up in looking after the additional work in connection with vouchers. The Board denied the claim of the employees.

ARBITRATION AND CONCILIATION IN SOUTH AFRICA

THE system of arbitration and conciliation in the Union of South Africa which was set up under the Industrial Conciliation Act of 1924 was recently amended by the Industrial Conciliation Amendment Act, 1930. A review of the original Act was given in the LABOUR GAZETTE, June, 1924, page 495. According to the September, 1930, issue of the British *Ministry of Labour Gazette*, the amendment provides that the constitution of a conciliation board may comprise officers or members of any other registered trade union or employers' organization not belonging to the industry involved in the dispute, provided that the number of such members does not exceed half the total number of employers' or workers' representatives, as the case may be.

The section dealing with arbitration has been amended to provide that the terms of any award made by an arbitrator shall be fixed by such arbitrator for a period of not less than four or more than eight months, but in any case not longer than the unexpired portion of a period specified by the Minister in respect of any agreement of the Council or Board concerned. Under the original Act, although the findings of an arbitrator were binding, no period could be prescribed by the arbitrator, and accordingly any such award was liable to be terminated on a month's notice.

The section dealing with the extended application of agreements and awards has been amended in various respects. Specific provision is now made for levying contributions towards the expenses of the council and for granting exemption from any terms of the agreement.

When an employer has failed to pay wages in accordance with the terms of an agreement or award, he may on conviction be compelled to pay into court an amount, additional to his fine, equal to the balance due for a period not exceeding one year. The court may direct that the whole or a part of this amount, not less than a quarter, may be paid to the worker concerned, and any balance paid into the consolidated revenue fund.

In order to prevent evasion of the provisions of an agreement by the employment of pass-bearing natives who are not covered by the definition of "employee" in the Act, the new Act provides that, on the instance of the council or board concerned, the Minister may specify the minimum rate of wages which such

persons may receive, and the maximum number of hours which they may work.

Other amendments relate to the registration of trade unions and employers' organizations, the appointment of officers by the Minister and their right of entry into and inspection of industrial undertakings, etc., the composition of Industrial Councils, precedure concerning the signing of agreements, the keeping of wage and time records by employers and the setting aside of partnership contracts entered into for the purpose of evading the provisions of an agreement or award.

Supplementing the original arbitration enactment was the Wage Act, 1925, which was outlined in the Labour Gazette, February, 1926, page 86. This legislation was also amended. Under the original Act, it was laid down that no determination under the Act should apply to persons covered by an award or agreement under the Industrial Conciliation Act which provides for wages not lower than those in force under the Wage Act. The amending Act provides that, irrespective of the question of comparative wages, persons already bound by an agreement or award under the Industrial Conciliation Act are exempt from any determination made under the Wage Act. In future the Minister of Labour may at any time suspend or cancel any determination or portion thereof if it is considered that an agreement subsequently made under the Industrial Conciliation Act will be applicable to workers affected by the cancellation or suspension, and that the wages and other conditions under the agreement are substantially not less favourable to the general body of such workers than those under the determination.

Provision is also made for a fresh investigation if during the currency of a determination such investigation is warranted.

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1930

THE number of strikes and lockouts in existence in Canada during September, 1930, was eleven, as compared with three during the preceding month. The number of workers involved and the time loss incurred was, however, much greater as several disputes involved many workers while in August no dispute of any magnitude was reported. As compared with September, 1929, the figures for September, 1930, show that, although the same number of strikes and lockouts occurred as a year previously, there were over twice as many workers involved, with some increase in time loss. Several strikes of coal miners in both eastern and western Canada, involving substantial numbers of workers, accounted for the greater part of the increase.

Date	Number of disputes	Number of employees involved	Time loss in working days
*Sept., 1930	11	2,599	13,452
*Aug., 1930	3	65	484
Sept., 1929	11	1,123	12,145

* Preliminary figures.

The record of the Department includes lockouts as well as strikes, but a lockout, or an industrial condition which is undoubtedly a lockout, is rarely encountered. In the statistical table, therefore, strikes and lockouts are recorded together. A strike or lockout, included as such in the records of the Department, is a cessation of work involving six or more employees and lasting at least one working day. Disputes of less than one day's duration, and disputes involving less than six employees, are included in the published record only when ten days or more time loss is caused, but a separate record of such disputes is maintained in the Department, and the figures are given in the annual review. Each month, however, any such disputes reported are mentioned in this article as "minor disputes."

The figures printed are inclusive of all disputes which come to the knowledge of the Department, and the methods taken to secure information practically preclude probability of omissions of a serious nature. Information as to a dispute involving a small number of employees, or for a short period of time, is frequently not received until some time after its commencement.

There were no disputes carried over from August, but eleven disputes commenced during September. Nine of these disputes terminated during the month, two being in favour of the workers, two in favour of the employers, two were partially successful and the results of three were recorded as compromises. At the end of September, therefore, there were two disputes recorded as strikes or lockouts as follows: coal miners, Springhill, N.S., and bakery drivers, Saskatoon, Sask.

The record does not include minor disputes such as are described in a previous paragraph, nor does it include disputes as to which information has been received indicating that employment conditions are no longer affected, but which the unions concerned have not yet declared terminated. Information is available as to four such disputes, namely: electrotypers, Toronto, Ont., December 20, 1926, one employer; photo engravers, Toronto, Ont., January 7, 1929, one employer; coal miners, Mercoal, Alta., June 14, 1930, one employer; and motion picture projectionists, Vancouver,

B.C., June 23, 1930, one employer. The dispute involving plumbers at Kingston, Ont., carried in this list for some months, was called off by the union involved on September 2, 1930.

Labourers in York Township, employed at piece rates to clear bricks from the highway, to be sold, ceased work on September 25 demanding higher rates, but some returned to work the next day. As only six out of the gang were involved, this is recorded as a minor dispute.

The following paragraphs give particulars in regard to certain disputes in addition to the information given in the tabular statement.

FISHERMEN, NORTH SYDNEY, N.S.—Fishermen ceased work on September 8, 1930, their request for higher prices for fish from the buying firms having been refused. It appears that some weeks earlier the buyers had issued a new classification of fish and prices. Reports indicate that some fishermen had already been abstaining from operations, but on September 8 the fishermen's union decided on a cessation of operations by all its members. The Board of Trade brought about negotiations between the parties and officials of the Federal Department of Fisheries went into the matter with the parties concerned and, as a result, a settlement was reached and work was resumed on September 15. It

STRIKES AND LOCKOUTS IN CANADA DURING SEPTEMBER, 1930

Misicians, Montreal, P.Q.....	22	396	Commenced Sept. 13, 1930; sympathy with musicians in another theatre; terminated Sept. 30, 1930; partially successful.

*Except disputes by which employment conditions are no longer affected, but which the unions concerned have declared unterminated.

was arranged that prices for some classes of fish would be increased, and that prices would be adjusted each season according to the changes in the market prices for fish from those at the time of the settlement.

Coal Miners, Shaughnessy, Alta.—The employees in one mine ceased work on September 10, 1930, because their proposal for a change in certain conditions affecting piece rates had been refused, the management pointing out that they were working under a two year agreement signed last May, and that the agreement provided for the arbitration of disputes as to conditions. Representatives of the Department of Labour brought about negotiations between the parties and finally a new agreement was reached, effective from September 27, 1930, to March 31, 1932, providing for resumption of work on a day wage basis until piece rates for contract mining could be agreed upon. Work was, therefore, resumed on September 29.

Coal Miners, Joggins, N.S.—Employees in one colliery ceased work on September 12, 1930, to secure higher piece rates on a new section. After negotiations between the parties, with the assistance of representatives of the provincial government, work was resumed on September 30 at a rate agreed upon for a three weeks' trial for the new system.

Coal Miners, Springhill, N.S.—Employees in three collieries of one company at Springhill ceased work on September 27, 1930, to secure higher piece rates for a new section. The management had proposed a rate of forty cents per ton, but the miners demanded fifty cents per ton, the rate paid in other sections of the mine. After negotiations between the management and representatives of the union work was resumed on October 7, a rate of forty-four cents per ton having been agreed to for a three months' trial.

Bakery Drivers, Saskatoon, Sask.—A number of drivers on delivery wagons for a bakery in Saskatoon ceased work on September 22, 1930, demanding the discontinuance of special convassers who accompanied some of the drivers on their delivery routes. One of the drivers had been laid off and the employees alleged that the special canvassers were being employed in order to replace the drivers who had joined the union. The strikers then demanded that the employer sign an agreement with the union providing for higher wages. Negotiations between the strikers and the management followed, at which the management offered to take back the strikers the following day, after which they would be replaced, but stipulated that while there might be a union of their own employees such a union must not become affiliated with any other organization. The proposal of the employer not being accepted, the strikers were replaced. Various organizations in the city attempted to bring the parties together and reach a settlement, but were unsuccessful, and at the end of the month no settlement had been made. Early in October the union asked the Minister of Labour for the mediation of the Department. A representative of the Department proceeded to Saskatoon, and negotiations were resumed. No settlement was reached but the management conceded the right of employees to join the union, promised that no employee would be discriminated against on account of union membership and agreed to re-employ any of the former employees needed. Accordingly a small number resumed work.

Men's Clothing Factory Workers, Montreal, P.Q.—Early in September employees in a number of men's clothing factories in Montreal ceased work to secure or to enforce union conditions, in several cases with reference to work sent out from the factory to subcontractors. From time to time workers in a factory would be called out where the employer refused to abide by the union conditions, and in all cases the union demands were granted within a day, all cases being settled by September 10.

Plasterers, Vancouver, B.C.—Plasterers employed on one building in Vancouver ceased work on September 2, 1930, protesting against a reduction in wages from $10.80 per day, the rate provided for in the union agreement, to $10 per day. Work was resumed on September 22, the union rate having been restored (Labour Gazette, Nov. 1929, p. 1284).

It appears that the contracting plasterers' association had given 90 days' notice of cancellation of the agreement as required by its clauses but no settlement or amendment had been agreed upon. Accordingly the agreement rate of wages was being paid on some jobs only.

Plasterers, Montreal, P.Q.—A number of plasterers were called out by the Plasterers and Cement Finishers International Association on September 6, 1930, the request of the union for an increase in wages from $1.05 per hour to $1.15 having been refused by the employers' organization. The union also desired to secure the five day week. The union had given notice of the change in June, as required under the existing agreement, and the employers had offered to increase the rate to $1.15 on May 1, 1931, but this was refused

by the union. Following negotiations between the parties, work was resumed on September 15, an agreement having been reached providing for an increase to $1.15 on May 1, 1931, with a further five cent increase per hour from September 1, 1931, to April 30, 1932. The agreement is summarized elsewhere in this issue.

Labourers (Extra Gang), Lansdowne, Ont.—Track labourers on an extra gang ceased work, demanding an increase in wages above the rate they were receiving of thirty cents per hour, ten hours per day. About half of the workers resumed work in one-half day and the others left the vicinity and were replaced.

Musicians, Montreal, P.Q.—(Sept. 1 and Sept. 13).—The management of one theatre and musicians failing to agree on the terms of an agreement for the ensuing year, no orchestra was employed from September 1, the contract for the previous year having expired. The management had proposed that the agreement should contain a clause providing for its cancellation on two weeks' notice, whereas the union insisted that the agreement should be for a full twelve months. Negotiations for a settlement were carried on and in the meantime the union refused to sign agreements as to three other theatres under the same management, but the musicians in these continued working pending a settlement. The union applied for a board of Conciliation and Investigation under the Industrial Disputes Investigation Act, but under the provisions of the Act such a Board could be established only with the consent of both parties. As the parties could not agree on the terms of reference to the Board, no Board was established and negotiations were broken off. The musicians in the other three theatres then ceased work on September 12. As the result of further negotiations between the International President of the union and the officials of the theatre corporation a settlement was reached providing for a one year agreement in the theatre first affected, subject to cancellation on four weeks' notice, while an agreement for one year was signed covering two of the other theatres. It was also arranged that the orchestra in the fourth theatre would be amalgamated with the orchestra in the first theatre; and work was resumed on October 1, 1930.

STRIKES AND LOCKOUTS IN GREAT BRITAIN AND OTHER COUNTRIES

THE latest available information as to strikes and lockouts in various countries is given in the Labour Gazette from month to month, bringing down to date that given in the issue for February, 1930, in the review of Strikes and Lockouts in Canada and Other Countries, 1929. The latter review included a table summarizing the principal statistics as to strikes and lockouts since 1919 in the several countries for which such figures were available. Many countries publish these statistics only once each year, the figures being issued in some cases after an interval of as much as two years, and for such countries the latest figures are not for relatively recent dates. Information about particular disputes is obtained for the most part from newspaper reports.

Great Britain

The number of disputes reported as beginning in August was 35, and 10 were still in progress from the previous month, making a total of 45 disputes in progress involving 8,200 workpeople, with a time loss of 49,000 working days. Of the 35 disputes beginning in August, 13 arose out of proposed reductions in wages, 9 on other wages questions, 6 on questions respecting the employment of particular classes or persons, 7 on other questions. Settlements were reached in 23 disputes, of which 2 were in favour of workpeople, 12 in favour of employers and 9 ended in compromises. In the case of 3 other disputes, work was resumed pending negotiations.

France

The strikes of textile workers and iron and steel workers in Northern France, which were in connection with the enforcement of the Social Insurance Act and which were reported in the Labour Gazette for August and September, have since terminated. As reported in the September issue, the strike of textile workers at Lille was settled on August 21, when, through the mediation of the Minister of Labour, the strikers agreed to return to work on condition that an increase in wages be considered when the cost of living index number of the department of the Nord is calculated in October. At the same time the metal workers at Lille agreed to refer the question of a wage increase to arbitration by the Divisional Inspector of the Ministry of Labour. As a result of this arbitration, wages of all workers have been increased 0·125

francs per hour. The textile workers at Armentières and Houplines returned to work September 11, also agreeing to refer the wage question to arbitration by the Divisional Inspector of the Ministry of Labour. In the Roubaix-Tourcoing district, the textile workers resumed work on September 15, when an agreement was reached through the mediation of the Minister of Labour providing for the payment of a bonus equal to the worker's contribution to the social insurance fund to all workers after one year's continuous service in one establishment, and after this first year's service the worker's weekly wage would be increased by the amount of his contribution to the fund. Workers who had already completed one year's service on the date of the agreement would receive the increase from that date.

Australia

The number of disputes reported for the year 1929 was 259, involving 926 establishments and directly involving 88,293 workers. In addition 17,111 workers were indirectly involved. The time loss for the year was 4,671,478 working days and the estimated loss in wages was £4,869,305.

United States

During July, the number of disputes which began was 65 and 32 were in effect at the end of the month. The number of workers involved in disputes in effect at the end of the month was 5,848 and the time loss 162,838 working days.

A strike involving about 4,000 textile workers at two mills at Danville, Virginia began on September 30, owing to alleged discrimination against employees on account of union activity.

New Rules on Workmen's Compensation in Quebec

Regulations made by the Workmen's Compensation Commission of the Province of Quebec under the Act of 1928 were noted in the Labour Gazette, February, 1930, page 159. The commission recently issued Circular No. 26, amending the regulation concerning the method adopted in calculating the amount of daily wages in cases of temporary total incapacity, where these wages are variable (page 159). The new circular rules in regard to this subject are as follows:—

"Practically, the only workmen to whom this subparagraph applies are longshoremen. Our experience leads us to believe that, in certain isolated cases, such a method of calculating the daily wages does not give justice. The Commission is of the opinion, therefore, that Sub-paragraph a, of Section 4 gives a proper rule for the calculation of the compensation payable to longshoremen and, therefore, Sub-paragraph 4-b is hereby cancelled. The cancellation of this rule with respect to variable wages will apply immediately and should also be taken into consideration in dealing with claims where the period of temporary total incapacity has not yet terminated."

Another of the earlier regulations reads as follows:—

"If the injured person is treated away from his home he is entitled, in addition to compensation, to the actual cost of his board and lodging not exceeding $1.50 per day if the injury does not warrant his admission into a hospital."

The new circular gives the following ruling on this subject:—

"The provisions of this sub-paragraph are hereby cancelled, as the Commission is of the opinion that the question of board allowance where the injury does not warrant the admission of the workman into a hospital cannot, with advantage, be made the subject of general ruling, and in future individual claims from workmen for board allowance will be treated on their merits. It should be understood, however, that where the workman is put to extra expense by being displaced for treatment at the request of the employer, board allowance will be payable up to a maximum of $1.50 per day."

The "Anti-injunction" bill, the provisions of which were outlined in the August issue of the Labour Gazette, page 741, was unfavourably reported upon by the Committee on the Judiciary of the United States Senate, mainly on the ground that the policy contained therein would be an invasion by the Federal government of State prerogatives, the power to control or shape industrial relations being vested in the States severally.

UNEMPLOYMENT RELIEF ACT, 1930

Application of $20,000,000 Granted by Parliament of Canada

THE last issue of the Labour Gazette (page 1050) contained a summary of the proceedings at the special session of the Parliament of Canada, beginning September 8, and concluding September 22, which had been summoned "to deal with problems arising out of exceptional economic conditions with resultant unemployment." One of the measures enacted during this special session was the Unemployment Relief Act, 1930, under the provisions of which the sum of twenty million dollars was appropriated, to be paid out of the consolidated revenue fund of Canada for the relief of unemployment under such terms and conditions as might be approved by the Governor-General in Council. The Act specified that the $20,000,000 might be expended "in constructing, extending or improving public works and undertakings, railways, highways, bridges, and canals, harbours and wharves; assisting in defraying the cost of distribution of products of the field, farm, forest, sea, lake, river and mine; granting aid to provinces and municipalities in any public work they may undertake for relieving unemployment and reimbursing expenditures made by provinces and municipalities in connection with unemployment, and generally in any way that will assist in providing useful and suitable work for the unemployed."

Shortly after the Act was assented to, an Order in Council (P.C. 2246, September 26, 1930) was issued, vesting its administration in the Minister of Labour, and appointing the Minister of Labour, the Minister of Railways and Canals, the Minister of Public Works, the Minister of the Interior and the Minister of Marine, to act as an advisory committee on expenditure. The order also stated the principles to be followed in the administration of the Act, these being contained in a series of Regulations. Under these Regulations the Minister was authorized to enter into agreements with the several provinces for the expenditure of the $20,000,000 appropriated under the Act, either for the purpose of immediate relief or for assisting local public works undertaken to provide employment. The sum of four million dollars was set aside to provide for the payment to municipalities of one-third of their expenditures in the direct relief of persons for whom work could not be procured, the provincial governments and the municipalities each being required to assume responsibility for one-third of the expenditure for this purpose.

In regard to public work undertaken for the relief of unemployment the Regulations provide that agreements should be made between the Minister and the provincial governments whereby the municipalities would pay one-half the total expenditures on public works undertaken by them, the Dominion and Provincial Government concerned each contributing one-fourth of the total amount. Exception is made where municipalities by reason of recent abnormal expenditures for unemployment relief, are unable to bear half the cost of such public works.

It is stipulated in the Regulations that any agreements involving the expenditure of the Dominion grant shall contain provision for the payment of Fair Wages to the workers engaged, and for the observance of the eight-hour day, in accordance with the principles contained in the Fair Wages and Eight-Hour Day Act, 1930, and the Fair Wages Order in Council. The text of the Regulations is given below.

Mr. Harry Hereford, of Ottawa, secretary of the Canadian Association of Garment Manufacturers, a former officer of the Department of Labour of Canada, who had served in the Department as Industrial Engineer and Eastern Superintendent of the Employment Service of Canada, has been appointed as director of Unemployment Relief, with offices in the Trafalgar Building, in Ottawa.

Agreements with Railway Companies

On September 30, 1930, by Order in Council (P.C. 2292), the Minister was authorized to enter into an agreement with the Canadian Pacific Railway Company and the Canadian National Railways whereby there would be expended by these railway companies a sum of approximately twenty-one million dollars in the performance of certain works and the purchase of certain material over and above the normal expenditure of the said railways, such works to be commenced immediately and to be completed within the next fifteen months. As compensation to the said railway companies for undertaking these works immediately the Dominion may pay out of the amount appropriated by the Unemployment Relief Act interest at the rate of five per cent per annum, calculated for a period of eighteen months, on the total estimated cost of the above mentioned works. It is estimated that this work will provide employment for 10,500 men and approximately 2,000 teams of horses.

Consideration was also given to implementing the Railway Grade Crossing Fund, from which fund, under the provisions of the Railway Act, contributions are made for the purpose of obviating dangerous level crossings.

Apportionment between Provinces

Conferences between the Minister of Labour and the Governments of the various provinces have been held and agreements as provided in the Regulations have been reached in regard to expenditures for relief and for public works to be undertaken for the purpose of providing work for the unemployed. In each of these agreements provision is made for the payment by the Dominion of one-third of the cost of direct relief undertaken by municipalities, the province agreeing to contribute an amount equal to that paid by the Dominion. The Dominion may pay one-half of the amount expended by the provinces for direct relief in unorganized districts. The agreements also provide that there may be paid by the Dominion from the Unemployment Relief Fund 25 per cent of the cost of public works and undertakings carried on by municipalities to provide work for the unemployed, and that the province will contribute towards such public works and undertakings a like amount.

Out of this Fund there may also be paid by the Dominion one-half of the cost of provincial public works and undertakings carried on to provide suitable work for the unemployed, including one-half of any amount expended by the provinces on the Trans-Canada Highway. These contributions by the Dominion towards the cost of public works and undertakings carried on by the various provinces and municipalities are to be made only after the submission of evidence satisfactory to the Minister of Labour that serious unemployment exists in the locality in which the works are to be carried on.

The amounts allotted for such public works and undertakings in the various provinces are not to exceed in Alberta, $900,000; in British Columbia, $900,000; in Manitoba, $900,000; in New Brunswick, $500,000; in Nova Scotia, $700,000; in Ontario, $3,850,000; in Prince Edward Island, $90,000; in Saskatchewan, $1,000,000. At the time of going to press the amount allotted to Quebec had not been definitely settled.

A subsequent agreement was entered into with the province of Saskatchewan to provide for the payment of a sum not to exceed $500,000 for the relief of distress in a large drought area of that province.

All the agreements contain a provision that on all works towards which the Dominion may make contribution, fair wages will be paid and hours of work not exceeded in accordance with the intent of the Fair Wages and Eight-Hour Day Act, 1930, and the Fair Wages Policy of the Government as set forth in Order in Council (P.C. 1206) dated 7th June, 1922, and amendments thereto, and that all persons employed on such public works shall be, as far as practicable, residents of the locality in which the work is being performed, and that there shall be no discrimination in the employment of persons by reason of their political affiliation.

Each province is to submit for approval of the Minister of Labour a memorandum setting forth the public works and undertakings to be carried on by the province and the municipalities to which the Dominion will contribute in accordance with the terms of the agreement.

A further account of the expenditures under the Unemployment Relief Act will be given in a later issue.

P.C. 2246

Privy Council, Canada

At the Government House at Ottawa

Friday, the 26th day of September, 1930.

PRESENT

His Excellency the Governor General in Council

Whereas unemployment, which is primarily a municipal and provincial responsibility has become so general throughout Canada as to constitute a matter of national concern;

And whereas it is desirable that assistance should be rendered by the Government of Canada towards the relief of such unemployment;

And whereas parliament has enacted The Unemployment Relief Act, 1930, being an Act for the granting of aid for the Relief of Unemployment;

And whereas the Act provides for the appropriation of a sum not exceeding twenty million dollars to be paid for the relief of unemployment out of the Consolidated Revenue Fund of Canada under such terms and conditions as may be approved by the Governor in Council:

Therefore His Excellency the Governor General in Council, on the recommendation of the Minister of Labour, is pleased to approve the annexed regulations under which the aforesaid sum may be paid out, and they are hereby approved accordingly.

E. J. LEMAIRE,
Clerk of the Privy Council.

Regulations

1. Except where the context otherwise requires, in these regulations the expression,—

(*a*) "Act" means the Unemployment Relief Act, 1930.

(*b*) "Minister" means the Minister of Labour.

2. There shall be reserved and set aside out of the moneys appropriated by the Act a sum not to exceed four million dollars to pay one-third of the expenditures of municipalities for direct relief where suitable work cannot be provided for the unemployed, and one-half of direct relief in unorganized districts.

3. The Minister may enter into an agreement with the Government of any province for the payment by such provincial Government of one-third of the said municipal expenditures for direct relief.

4. The Minister may enter into an agreement with the Government of a province in which any municipality is situate for the payment to such municipality by the Government of Canada of twenty-five per centum of the cost of such public works and undertakings as may be necessary to provide suitable work for the unemployed, and by the Government of the province of twenty-five per centum of the said cost, and that fifty per centum of the said cost shall be assumed and borne by the municipality.

5. Notwithstanding the provisions of the preceding section and where, by reason of recent abnormal municipal expenditures for unemployment relief, a municipality is unable to bear fifty per centum of the cost of such public works and undertakings as may be necessary to provide work for the unemployed in such municipality, the Minister may enter into an agreement to vary the proportion of the cost of such public works and undertakings to be borne by the provincial and Dominion Governments.

6. The Minister may enter into an agreement with the Government of any province for the carrying on by such provincial Government of public works, improvements and other undertakings that will assist in providing suitable work for the unemployed, the cost of such public works and improvements to be borne by the provincial and Dominion Governments in such proportions as may be agreed upon.

7. All agreements made with provincial or municipal authorities involving the expenditure of any portion of the moneys appropriated by the Act for public works or undertakings shall contain provisions for the payment of fair wages and hours of work in accordance with the intent of the Fair Wages and Eight-Hour Day Act, 1930, and the Fair Wages Policy of the Government of Canada as set forth in Order in Council (P.C. 1206) dated 7th June, 1922, and amendments thereto. Agreements involving the expenditure of any portion of the said moneys for public works or undertakings shall contain a provision to the effect that all persons employed on such public works or undertakings shall be, as far as practicable, residents of the locality in which the work is being performed, and that in no case shall discrimination be made in the employment of any persons by reason of political affiliation.

8. Statements of accounts for expenditures by municipalities for direct relief or for public works and undertakings made under the provisions of the Act and these regulations shall be accompanied by a certificate of the appropriate provincial authority that expenditures have been duly made in accordance with such statements.

9. The Minister may at any time require the province to furnish information, detailed or otherwise, in connection with statements of account rendered by the province.

10. There may be paid out of the moneys provided by the Act such sums as may be required for administration purposes, including salaries of temporary employees, all of which sums shall not exceed one-half of the one per centum of the moneys thereby appropriated.

11. The administration of the Act and regulations shall be vested in the Minister of Labour, subject to the approval of the Governor in Council, and the Minister of Labour, the Minister of Railways and Canals, the Minister of Public Works, the Minister of the Interior and the Minister of Marine shall be an advisory committee on expenditures to be made under the Act.

Measures to Cope With Unemployment in Various Countries

Industrial and Labour Information, the weekly publication of the International Labour Office, in its issue of September 8, refers to the measures that are being adopted to meet the conditions of unemployment existing in different countries. Attention is drawn to a memorandum by Sir Henry Strakosch, a member of the Financial Committee of the League of Nations, attributing the recent fall in commodity prices to the deficiency of supply of new monetary gold. The Executive Committee of the Labour and Socialist "International" has invited the International Federation of Trade Unions to set up a joint committee with a view to convening a special world conference for the purpose of taking simultaneous international measures against unemployment. The Inter-

national Cotton Congress to be held next year will study the causes and possible remedies of the world-wide depression in the cotton industry.

In Great Britain, the Committee on the cotton industry has presented its report, drawing attention to the need of a better organized marketing system and of a reduction in costs of production by means of technical improvements, the formation of large units and the extension of co-operative effort. The Public Works Facilities Act, the object of which is to facilitate the execution of works which will contribute to the relief of unemployment, has received the Royal Assent.

On the initiative of the German Government, a limited company has been established for the promotion of public works under State control.

The Italian Government has decided to introduce a scheme of public works in order to prevent unemployment during the winter months.

Dismissals of workers in the Rumanian oil fields in consequence of the restriction of output have led to the intervention of the Government and the adoption of certain measures of control.

The fall in the price of silk has led to a serious crisis in the silk industry in Japan.

In view of the serious unemployment in Australia, the Federal Government has decided to distribute one million pounds among the various States to assist them in relieving unemployment.

In New Zealand an Unemployment Bill has been introduced, embodying most of the recommendations of the special committee on the subject.

In the United States the bill relating to the collection of employment statistics has become law.

The Labour Department of the Brazilian State of Sao Paulo has recommended the establishment of agricultural settlements as the best means of improving the position of the labour market.

Unemployment Insurance in Europe and America

The *New Republic,* October 8, 1930, discusses the present position and the possible future of Unemployment Insurance in America. The recent depression of business has shown, it is claimed, that practical measures for stabilizing conditions in industry must be taken on this continent, as in Europe. "Fortunately for American industry it can, in setting up the machinery for unemployment insurance, profit from the experiments and experience of Europe and of a few pioneers with jobless insurance in this country. Unemployment insurance has now worked successfully in the men's clothing industry since May, 1923" (Labour Gazette, June, 1930, page 677).

"The experience of England during the past eighteen years and the much briefer experience of Germany reveal the strength and weakness of compulsory unemployment insurance in the modern industrial state. By imposing greater administrative responsibility upon industry and by introducing considerable self-government in the collection and distribution of the funds, an American plan of compulsory insurance can avoid the extravagances and the undesirable political features of some of the European schemes. With these safeguards, the time is ripe for trying compulsory unemployment insurance in this country as the only tested device for reducing the misery and poverty that follow these inevitable waves of industrial unemployment."

Discussing the difficulties now confronting unemployment insurance schemes in Europe, the *New Republic* points out that "no one of the many European systems of compulsory unemployment insurance derives its funds from the State. The government has in each case set up the machinery of collection and distribution, but the bulk of the benefits distributed to the unemployed during the past decade have come from contributions by employers and employees. The State has made loans to the unemployment funds or free appropriations of benefits to the unemployed only when their number has so increased or the period of unemployment has been so prolonged that further payment from the funds themselves would lead to insolvency. The significant contrast between the pre-war and post-war methods of handling unemployment relief in Europe consists in the fact that, before the war, all of the unemployed in distress were thrown for relief upon the public and private agencies of charity, whereas, since 1920, they have received their benefits out of funds to which they regularly contribute, and are forced to resort to doles only in the event of unusually severe and persistent unemployment. It is simply an accident of the times that the economic readjustments arising out of the War have produced such violent dislocations in industry, and consequently such abnormal unemployment, as to impose upon the unemployment-insurance scheme financial burdens unthinkable in the years before 1914."

ORDER IN COUNCIL LIMITING IMMIGRATION TO CANADA

THE following Order in Council, P.C. 1957, dated August 14, restricts the discretionary powers hitherto vested in the Department of Immigration and Colonization in regard to the admission of certain specified classes of immigrants:—

P.C. 1957

14th day of August, 1930.

His Excellency the Governor General in Council, on the recommendation of the Minister of Immigration and Colonization, is pleased to order as follows:—

1. Paragraphs 2, 3, 7 and 8 of the Regulations made by Order in Council P.C. 183 of the 31st January, 1923, as amended by P.C. 642 of the 11th April, 1923, and P.C. 534 of the 8th April 1926, are hereby rescinded.

2. Under the authority of Section 38 of the Immigration Act, Chapter 93, R.S.C. 1927, the Regulations made by Order in Council P.C. 183 of the 31st January, 1923, amended as aforesaid, are hereby further amended by adding thereto the following paragraph:

"(9) in possession of a provisional letter of entry issued prior to the 14th day of August, 1930;

"Provided that all such provisional letters issued more than five months prior to the said 14th day of August, 1930, shall be and are hereby cancelled."

E. J. LEMAIRE,
Clerk of the Privy Council.

Order in Council P.C. 183 dated January 31, 1923 (as amended), provided as follows (The sections rescinded by the new Order are marked by asterisks).

From and after the 15th February, 1923, and until otherwise ordered, the landing in Canada of immigrants of all classes and occupations, is hereby prohibited, except as hereinafter provided:

The Immigration Officer in Charge may notwithstanding the provisions of P.C. 23 of the 7th January, 1914, permit to land in Canada any immigrant who otherwise complies with the provisions of the Immigration Act, if it is shown to his satisfaction that such immigrant is,—

(1) A bona fide agriculturist entering Canada to farm and has sufficient means to begin farming in Canada.

*(2) A bona fide farm labourer entering Canada to follow that occupation and has reasonable assurance of employment.

*(3) A female domestic servant entering Canada to follow that occupation and has reasonable assurance of employment.

(4) The wife or child under 18 years of age, of any person legally admitted to and resident in Canada, who is in a position to receive and care for his dependents.

(5) Any United States citizen entering Canada from the United States who shall satisfy the Immigration Officer in charge at the port of entry that he has sufficient means to maintain himself until employment is secured.

(6) Any British subject entering Canada directly or indirectly from Great Britain or Ireland, Newfoundland the United States of America, New Zealand, Australia or the Union of South Africa, who shall satisfy the Immigration Officer in Charge at the port of entry that he has sufficient means to maintain himself until employment is secured: Provided, that the only persons admissible under the authority of this clause are British subjects by reason of birth or naturalization in Great Britain or Ireland, Newfoundland, New Zealand, Australia or the Union of South Africa.

*(7) A person who has satisfied the Minister that his labour or service is required in Canada.

*(8) The father or mother, the unmarried son or daughter eighteen years of age or over, the unmarried brother or sister, of any person legally admitted to and resident in Canada who has satisfied the Minister of his willingness and ability to receive and care for such relative;

Provided that this clause shall not apply to the relative of any resident of Canada who himself failed to observe the conditions under which he was admitted to Canada.

And provided further that the provisions of this Order in Council shall not apply to immigrants of any Asiatic race.

Mr. A. F. Whitney, president of the Brotherhood of Railroad Trainmen, in *The Railroad Trainman,* August, 1930, deals with the "Trainman's Viewpoint on Safety." He finds that there has been a steady improvement in regard to safe operation of railways since the war, and concludes with a strong statement of the importance of fostering a sense of "individual and personal responsibility up and down the line. . . . There is nothing I can conceive," he writes, "which will contribute more to this final and determining factor of safety than the preservation of a high order of morale among railroad workers. In the railroad field this is not a difficult task. Railroad men manifest a loyalty to their vocation which is excelled by no other class of employees in America. There is more of the spirit of craftsmanship among them than has survived modern mass methods anywhere else in our industrial system. . . . It is one of those intangibles that does not always appear among the visible assets."

MIGRATION BETWEEN CANADA AND THE UNITED STATES

The last issue of the Labour Gazette (page 1108) gave figures prepared by the Department of Immigration and Colonization showing the number of returned Canadians from the United States for the four months ended July 31, 1930; and earlier figures were given in the issue for May, page 610. A comparison of the figures of migration between Canada and the United States for the first six months of the calendar year 1930 with those for the first six months of 1929 presents some points of interest. In the table given below the figures of admission to the United States are those of the United States Immigration Service and include all persons admitted to the United States as immigrants whose last country of permanent residence was Canada. The figures of immigration to Canada from the United States and also those of "Returning Canadians" are those of the Canadian Immigration Service.

—	January–June		Change
	1929	1930	
Emigrants to United States from Canada	29,447	23,818	— 5,629
Immigrants to Canada from United States.	16,977	14,790	— 2,187
"Returning Canadians"	14,884	14,072	— 812

All totals for 1930 show a reduction from the corresponding figures for 1929, but by far the largest decrease is in the figure of emigration from Canada to the United States. Any explanation of this decrease is, of course, in large part conjectural, but two causes have probably operated more strongly in 1930 than in 1929 to restrict emigration from Canada to the United States. In the first place, employment conditions in the United States during the first half of this year seem to have been less satisfactory than they were in Canada; secondly, both the United States Consular Service in controlling the issue of immigration visas and the United States Immigration Service in examining applicants at the border have been rejecting more prospective immigrants this year than last year.

If one adds together the figures of immigrants to Canada from the United States and of "Returning Canadians" and balances the total against the figure of emigrants to the United States from Canada, the result is that in the first six months of 1930 there was a balance in favour of Canada of 5,044 while in the same period of 1929 there was a balance in favour of the United States of 2,414. These results, of course, are not complete, since, apart from illegal entries of which there is no record, no United States figure exists to compare with the figure of "Returning Canadians" compiled by the Department of Immigration. They seem to indicate, however, when allowance is made for all omissions, that Canada is at any rate no longer losing population to the United States on the balance.

United States Immigration Policy

It was announced by President Hoover on September 9 that a policy of stringent restriction of the immigration to the United States of members of the working class would immediately be put into effect. The method proposed is through strict administration of the clauses of the Immigration Act which gave to Consular Officers the right to refuse immigration visas to persons whom they consider liable to become public charges after their admission to the United States. Consular Officers are given full discretion in issuing or refusing to issue immigration visas under the Immigration Act; and no appeal to the courts can be made from their decisions. The proposed procedure is considered to be far more satisfactory than the rejection of prospective immigrants at ports of entry by officers of the Immigration Service, inasmuch as it restricts immigration at its source and prevents rejected immigrants from having recourse to court proceedings to secure their admission. The courts have held that an immigrant possessed of a visa and not otherwise inadmissable should not be excluded at the port of entry as liable to become a public charge if he was in possession of sufficient funds to reach his destination.

Mr. William Green, the President of the American Federation of Labour, succinctly summed up the probable effect of the new procedure on intending immigrants of the working class in an interview which he gave to the press on September 9.

He said that the prospective immigrant would be asked if he had work assured in the United States; if he answered in the affirmative, his entrance could be restrained under the Contract Labour Law; and if he answered in the negative, he would be prevented from entering as liable to become a public charge. The American Federation of Labour has recently gone on record in favour of the complete cessation of all immigration while unemployment remains an acute problem

14675—3½

OLD AGE PENSIONS IN CANADA

Statistical Summary of Administration During Second Quarter of 1930 and Since Inception of the System

THE accompanying table gives particulars of operations under the Old Age Pensions Act (Revised Statutes of Canada, 1927, chapter 156) and the various provincial concurrent Acts, during the second three months of 1930, and since these Acts became severally effective. The text of the Old Age Pensions Act was given in the LABOUR GAZETTE, April, 1927, page 375. It makes provision for the establishment of a Dominion Provincial pension system to be effective in such provinces as have enacted special legislation for this purpose. These provinces are British Columbia, Alberta Saskatchewan, Manitoba, and Ontario. The New Brunswick Legislature passed an Old Age Pensions Act at its session this year to become effective on its proclamation by the Lieutenant Governor in Council. The final report of the Nova Scotia Commission on Old Age Pensions was outlined in the LABOUR GAZETTE, May, 1930, and the question of participating in the system is still under consideration in that province.

Under the Old Age Pensions Act a pension is payable to any British subject of 70 years and upwards who is not in receipt of an income of as much as $365 a year and who has resided in Canada for the 20 years preceding, and has also resided in the province in which the application is made for the five years immediately preceding the granting of the pension. The maximum amount of pension payable under the Act is $240 yearly. In cases where pensioners have a private income the amount of their old age pension is subject to a reduction by the amount, if any, that their private income exceeds $125 a year. The administration of old age pensions is entrusted to the authorities appointed by the respective provincial governments. The Department of Labour of Canada pays quarterly to each province one-half of the total amount of the pensions paid by the provincial pension authority during the preceding three months.

FINANCIAL SUMMARY OF OLD AGE PENSIONS IN CANADA AS AT JUNE 30, 1930

	Alberta	British Columbia	Manitoba	Ontario	Saskatchewan	North West Territories	Totals
	Act effective Aug. 1, 1929	Act effective Sept. 1, 1927	Act effective Sept. 1, 1928	Act effective Nov. 1, 1929	Act effective May 1, 1928	Order in Council effective March 1, 1929	
Total number of pensioners as at June 30, 1930	2,341	4,792	5,283	30,268	4,603	4	47,291
Total amount of pensions paid during first quarter of fiscal year 1930-31 (Period April 1-June 30, 1930)	$152,475 16	$279,320 12	$321,263 00	$1,735,019 52	$274,992 46	$260 51	$2,763,330 77
Dominion Government's share of expenditure	76,237 58	139,660,06	160,631 50	867,509 76	137,496 23	260 51	1,381,795 64
Total amount of pensions paid since inception of the Old Age Pensions Act to June 30, 1930	419,895 20	2,328,994 64	1,970,558 67	3,990,707 84	1,594,935 29	818 25	10,305,909 89

COMBINES INVESTIGATION ACT

Report of Investigation Into Alleged Combine of Toronto Electrical Contractors

THE report of an investigation into the Electrical Estimators' Association, an alleged combine of electrical contractors in the city of Toronto, was received from Mr. Thomas N. Phelan, K.C., on October 7 and was made public by the Minister of Labour.

The investigation into the operations of this group, which comprised practically all the larger firms in the electrical contracting business in Toronto, was outlined in the Labour Gazette, August, 1930, page 909. The Electrical Estimators' Association was an unincorporated body formed in 1927 for the purpose of allotting among its members contracts for the installation of electric wiring and equipment in building construction. Some seventeen firms were members of the Estimators' Association. These companies, while constituting in number a small section of the total electrical contracting firms in Toronto, did by far the greater volume of the total business in the city in this trade. Only jobs amounting to $1,000 or over in contract price were apportioned through the Association's system. Some 60 contracts in this class were handled during the two and one half years of the Association's operation, from early in 1927 to about October, 1929. These consisted of the electric wiring of the larger building construction jobs in Toronto during this period, including office buildings, factories churches, hospitals, schools and apartment buildings.

A preliminary inquiry into the activities of the Association was completed early in 1930. Mr. Thomas N. Phelan, K.C., was appointed as a commissioner under the Combines Investigation Act in May, to conduct a more exhaustive investigation to determine whether the Association constituted an illegal combine. The hearing of evidence and of representations by counsel before the commissioner was concluded in July.

Report of Commissioner

The commissioner's report, containing his conclusions and findings, reviews concisely the methods of operation of the Electrical Estimators' Association. The report states that the main if not the only activity of the Association was the supervision and control of tenders in electrical installations in the Toronto area. Three systems were used in agreeing on the members to whom contracts would be allotted, first, the averaging of tenders; second, the averaging of costs; and third, the system of protected jobs.

"In the averaging of tenders this practice was followed: Those members who proposed to tender on a job under consideration met at the Association's office, bringing with them the tenders which they proposed to submit to the owner. The different tenders were tabulated and averaged, and the tender nearest to the average was then submitted by the member to the owner. Those whose tenders were above the average submitted them without change; those whose tenders were below increased the amount to bring their tender above that submitted by the member selected by the Association.

"After a time the method was changed from the averaging of tenders to the averaging of costs. By this method the members of the Association who proposed to tender on a job met. Each of those at the meeting submitted his estimate of the cost of labour and material for the work in contemplation. These estimates were tabulated and averaged. According to the plan, if the highest estimate was more than 10 per cent above the next highest, or the lowest more than 10 per cent below the next lowest, these were eliminated before averaging. The member submitting the estimate nearest the average was entitled to submit a tender for the contemplated work without fear of price competition from the other members of the Association. To his estimate of costs the successful member was entitled to add an over-riding charge covering overhead and profit, and in an analysis of the different works done on this method the over-riding per cent varied from 20 per cent to 30 per cent, the average being about 27½ per cent.

"Under the third practice of the Association above referred to, 'protected jobs,' a member who could establish to the satisfaction of the Association a relationship with the owner of the proposed work which gave him some assurance that the contract would be awarded to him, was given the privilege of submitting a tender free from any price competition whatever on the part of the other members of the Association. The 'protected' member advised the others in the Association of his tender price. It was for the others

then either to refrain from quoting or to quote a figure higher than that of the 'protected' member.

"When a member was successful in securing a contract after it had been allotted to him by the Association by any of the above methods, he then paid to the Association 2 per cent of the contract price. This percentage was usually added to the tender and passed on to the owner. The Association received approximately $5,300 from this source."

The results of these three methods to the owners of the buildings concerned, and to the public, are illustrated in the commissioner's report in accounts of specific contracts handled under each plan.

Illustrative of the averaging of tenders, the Association's arrangements on four electrical contracting jobs are reviewed. The four contracts were on the West End Technical School and the Sick Children's Hospital, in April, 1927; the Toronto East General Hospital and the Toronto General Hospital extension in August, 1927. In each case, proposed tenders which were lower than the average tender were raised before they were submitted to the representative of the owner of the building concerned. The cost to the owner was thus increased by the difference between the amount of the lowest proposed tender and the price of the average tenderer receiving the contract, and the competition of the lower tenderers was eliminated.

Examples of the averaging of estimated costs are given in the electric wiring contracts for the Arena Gardens in November, 1927; and the Murray P. Fleming residence and Erskine Church in January, 1928. After determining the prospective tender with an estimate of costs nearest the average of those submitted to the Association's meeting, the firms with lower estimates increased their allowance for overhead and profit sufficiently to bring their tender figure above that of the firm who had been selected to secure the contract. Instead of adding a normal allowance for overhead and profit, the contractors in some cases added 60 per cent, 80 per cent or 90 per cent to their independently estimated costs.

Six contracts are listed as examples of the protected job plan of awarding contracts. In each case one electrical contractor was given complete immunity from price competition by the other members, who, without making any estimate of costs, submitted entirely fictitious tender prices to the owner at amounts in excess of the protected tender.

The commissioner's report states that during the period of the Association's operation its members were in substantial control of all the larger contracts for installation in the Toronto area; having "virtually a monopoly of the larger jobs in the city." The secrecy with which the Association was maintained, and its effect in discouraging efficiency are dealt with in the following paragraphs:

"The Secretary and other members of the Association admitted that these methods were carefully concealed from the owners and architects with whom the members were dealing. Prominent architects were called who testified that they had no knowledge or suspicion of these practices. Indeed, it is obvious that the practice could not be successfully maintained unless it was kept absolutely secret.

"It was faintly contended that the Association came into existence and was maintained for the purpose of educating its members in preparing accurate cost estimates. The evidence does not warrant the conclusion that any attention was given to the education of the members along these lines. The result of the method was rather to encourage carelessness in the preparation of tenders, because the successful member was the one who could most accurately guess the average figures which might be submitted to the Association."

The findings of the commissioner from the evidence submitted are that the members of the Electrical Estimators' Association were parties to a combine in violation of the Combines Investigation Act and that they had also offended against section 498 of the Criminal Code. Section 498 of the Criminal Code declares agreements or arrangements to unduly prevent or lessen competition in articles of trade or commerce to be unlawful. With respect to the alleged violation of this section of the Criminal Code, the report of the investigation reads as follows:

"Competition was interfered with, both in respect of the article or commodity with which the members of the Association dealt, and in respect of the labour for the installation of these articles or commodities. An analysis of the figures of different tenders showed that material was a very much larger part of the tender than labour. I find also that competition was unduly prevented or lessened and that the prices of the articles or commodity which the members of the Association dealt with were unreasonably enhanced. There was, therefore, a violation of the provisions of the Criminal Code by the members of the Association concerned in these unlawful acts."

After summarizing contentions of counsel representing the members of the Association during the investigation, the report of the

commissioner concludes with the following statment dealing with the alleged offences against the Combines Investigation Act and listing the firms involved:

"As to the contention of counsel that the eliminating of a possible lower tender was not against the public interest if it was shown that the owner had received good work at a reasonable price, the evidence discloses that, by reason of the operations of the Association, owners were called upon to pay a price which was unduly enhanced and unreasonable.

"It is therefore my conclusion that the activities of the Association did operate against the interest of the public and that these activities resulted from an agreement which had, or was designed to have, the effect of lessening competition or enhancing price, and constituted a combine contrary to the provisions of the Combines Investigation Act.

"Under Section 32 of this Act every person is guilty of an indictable offence 'who is a party or privy to or knowingly assists in the formation or operation of a combine within the meaning of this Act'. I find upon the evidence and so report that the following were members of the Electrical Estimators' Association (J. E. Curran died in 1929):

Harry Alexander, Limited;
Bayview Electric Company, Limited;
Beattie-McIntyre, Limited;
Bennett and Wright Company, Limited;
Canadian Comstock Company, Limited;
Canada Electric Company, Limited;
A. O. Duncan;
Electrical Maintenance and Repairs Company, Limited;
R. A. L. Gray and Company;
Harris and Marson;
Moss Electric Company;
J. Everard Myers;
Patterson Electric Company;
Richardson and Cross;
E. L. Roxborough;
Toronto Electric Company;
John Anderson McKay, Secretary;
James E. Curran and Company,

and that these members did enter into a combine which was contrary to the provisions of the Combines Investigation Act; and that by Section 32 of the Act they committed indictable offences. I am also of the opinion that the same members have violated Section 498 of the Criminal Code."

Investigation Into Alleged Combine in Motion Picture Industry

An application was received during the last fiscal year for investigation of an alleged combine of certain exhibitors and distributors of motion pictures in Canada. It was alleged by the applicants that the largest company operating motion pictures theatres in Canada, with the co-operation of ten companies distributing motion picture films in Canada, constituted a combine operating to the detriment of the public in violation of the Combines Investigation Act. The application further stated that the combine restricted the circulation of motion picture film in such a way as to work to the disadvantage of the independent theatres, discriminated against independent exhibitors by requiring them to sign unfair contracts in order to secure the lease of films, and by other means lessened competition and enhanced prices to the detriment of the public.

The main part of the preliminary inquiry in this case was made by Professor Kenneth W. Taylor, of McMaster University. It disclosed *prima facie* evidence of a combine, and a commissioner was therefore appointed to make the more extensive investigation for which the Act provides. The appointment of Mr. Peter White, K.C., of Toronto, was announced on September 23, 1930. The first hearings were held in Toronto early in October.

Court Proceedings Against Plumbing Combine

The decision of Magistrate D. M. Brodie, of Windsor, as to whether or not he would commit for trial twenty-three persons including members of the Amalgamated Builders' Council, the Canadian Plumbing and Heating Guild, and related organizations, an alleged combine in the plumbing and heating industry in Ontario, was to have been delivered on September 4. It was withheld, however, until November 3, or until such time as the decision of the Privy Council on the constitutional validity of the Combines Investigation Act should be announced.

Under the prosecutions in these cases, which were instituted by the Department of Justice, each of the defendants is charged with eight counts, four under the Combines Investigation Act and four under section 498 of the Criminal Code. The charges relate to combining with the result of lessening competition and enhancing prices and otherwise restraining or injuring trade to the detri-

ment of the public in connection with plumbers' and other builders' supplies or services.

Proceedings commenced by the Department of Justice against persons at London, Ontario, who were associated with the alleged combine in the plumbing industry were resumed on September 10 in the London Police Court, when Crown counsel and defence counsel argued for an immediate continuance of the London preliminary hearings on the question of committal for trial. The decision of the London magistrate, however, was to adjourn the case until after the announcement of the judgment in the Windsor preliminary cases.

Earlier proceedings in the above cases were reported in the June, July and August issues of the Labour Gazette. In May, thirteen members of the Ontario plumbing combine at London were fined a total of $26,000 for violations of the Combine Investigation Act. The remaining charges to be dealt with at London are principally those against the head officers of the alleged combine, all residents of the city of Toronto.

Inquiry Into Bread and Flour Prices

A preliminary survey of prices of bread in Canada and their relation to prices of flour and wheat has been ordered by the Minister of Labour. While no definite charges of a combine have been made, numerous requests have been received for such an inquiry in view of the failure of bread prices to fall proportionately to the declines in prices of wheat. Representations to this effect were received from the City Council of Vancouver, from other city councils in Western and Eastern Canada, and from other sources. This inquiry, which is being made by the Registrar of the Combines Investigation Act, was started in September.

Report on Organization in Industry, Commerce and the Professions in Canada

The Department of Labour has just issued the Ninth Report on Organization in Industry, Commerce and the Professions in Canada, being for the year 1930. The report indicates the extent to which organization has developed among manufacturers and other employers of labour and among those engaged in the commercial life of the Dominion. It also contains much information in regard to associations whose members are engaged in professional, technical and scientific pursuits. The organizations mentioned in the volume are divided into the following groups:—Manufacturing; Building and Construction; Mining; Transportation and Communication; Printing and Publishing; Laundering, Cleaning, Repairing; Personal Service and Amusement; General Manufacturers & Employers; Financial; Agriculture; Dairying; Horse, Live Stock, Sheep, Breeders, etc.; Wholesale Merchants; Retail Merchants; Real Estate Dealers; Professional; Technical & Scientific; Insurance; Funeral Service.

According to the report, there are in the Dominion 347 main and branch associations, with a combined membership of 45,620, composed of persons or firms who are connected with industries in which the employment of workpeople is an important factor. With some of the corresponding unions of wage earners many of the organized employers have agreements covering conditions of employment in their various establishments. In the remaining eleven groups the employment of labour is in some cases only incidental, and with the exception of the retail merchants' section there is no corresponding body of organized employees.

While for the most part the associations whose names appear in the report are purely Canadian, a number are affiliated with organizations whose headquarters are in the United States. The names of associations printed in the report number 791 main organizations and 733 branch associations, making in all 1,524 associations, with a combined membership of 946,244, which in some cases apply to companies, but in the main the figures represent individuals.

The report supplements the Department's annual report on "Labour Organizations in Canada," which was reviewed in the Labour Gazette, August, 1930, page 922.

During September 5,830 accidents were reported to the Workmen's Compensation Board of Ontario, a decrease of 8 from the number during August, and 1,408 less than the number during September a year ago. The fatal accidents numbered 41, as against 42 in August 1930, and 47 in September a year ago. The total accidents reported to date this year number 54,107, as compared with 65,752 during the same period last year. The benefits awarded during September amounted to $594,787.57, of which $492,768.79 was for compensation and $102,018.78 for medical aid. A comparison of the benefits for the nine-month period shows total benefits this year $5,541,622.80, as against $5,903,683.77 last year.

LABOUR LEGISLATION IN NEW BRUNSWICK IN 1930

A NUMBER of statutes of labour interest were enacted during the session of the New Brunswick Legislature which opened on February 27 and closed on April 10, 1930. These included new laws providing for the protection of children, mothers' allowances, minimum wages for women, old age pensions, and an amendment to the Elections Act dealing with advance polls.

Children's Protection

The Children's Protection Act, which comes into force on proclamation, contains a number of sections dealing with the employment of children. A "child" is defined as "a boy or girl actually or apparently under 16 years of age."

Part I of the Act deals with children in need of protection. A child who is found begging or receiving alms in a public place, or carrying on a street trade, or habitually allowed to loiter in a public place after 9 p.m. (or such other hour as is fixed by the local authority), or who without sufficient cause is habitually absent from school is deemed to be a child in need of protection. Such child may be apprehended without warrant by any superintendent of child protection, constable, or other officer authorized by the Act, and placed in a shelter or home established by a Children's Aid Society or other approved institution. Within four days the child must be returned to the parents, or brought before a judge for examination. A penalty of $100, and, in lieu of, or in addition thereto, one year's imprisonment may be imposed upon any person contributing to a child becoming a child in need of protection.

A children's aid society to whose care a child has been committed may place the child in a foster home up to 18 years of age or for a shorter period, under a written contract providing, among other things, for the education of the child, for teaching him some useful occupation, and for the payment to the society for the benefit of the child of any sum of money that may be provided for in the contract. A penalty similar to that quoted above is provided for any person inducing a child under 21 years of age to leave any service or place where he has been lawfully placed for the purpose of being nursed, supported, educated, adopted, or employed, or to break any lawful agreement.

Part II deals with juvenile offenders. When a delinquent child is committed to the Maritime Home for Girls, or the Home of the Good Shepherd, the judge may, at the request of the head the Institution, make an order for the payment by the municipality to which the child belongs of a specified sum for its maintenance and education. Provision is made, however, that such children shall not be employed in any occupation of which the product or work is sold to the public at lesser prices than that produced by other labour.

Part III provides for the establishment of a juvenile court in every municipality or group of municipalities in which the Juvenile Delinquents Act is proclaimed.

Part IV deals with street trades and unwholesome occupations, and provides that no girl under 12, and no boy under 10 years of age shall engage in any street trade or occupation unless licensed by the judge of the Juvenile Court, or, if none be established, by the county court judge. No child under fourteen years of age may be licensed or permitted to engage in a street trade or occupation during school hours, and no boy under 16 may engage in such trade or occupation between 10 p.m. and 6 a.m. Municipal councils are authorized to make by-laws regulating the time after which children may not be in a public place at night without proper guardianship, and the age or apparent age at which boys and girls respectively shall be required to be in their homes at the hour named in the by-law. Provision is made for the protection of children committing breaches of such by-laws, and a penalty is imposed on parents or guardians permitting children habitually to violate them Children under 14 years of age may not be employed in bowling alleys, billiard rooms, or pool rooms at any time, and children under 16 years may not work in such places after 10.30 p.m. A penalty of $100 is imposed for each offence against the provisions of Part IV and in case of a second offence imprisonment for a term not exceeding six months.

Mothers' Allowances

The Mothers' Allowances Act, which comes into force on proclamation, provides for the granting of an allowance to any mother of two or more children under 16 years of age, who is a widow and can fulfil the statutory conditions. The mother of one child under 16 is eligible only if she is permanently disabled and unable to support the child; or if she has residing with her another child of her own who is over 16 years of age, but who is permanently disabled and incapable of maintaining himself.

In each case the advisory commission must be satisfied that—

(*a*) The mother is a fit and proper person to have the care and custody of her children;

(*b*) She is without adequate means of maintaining them without such allowance;

(*c*) The children are in the actual care of the mother and were born in lawful wedlock;

(*d*) The mother was a resident of New Brunswick at the time of the application for such allowance, and for at least three years immediately prior thereto, or was so resident since her lawful marriage to her deceased husband;

(*e*) The mother was a resident of New Brunswick at the time of the death of her husband;

(*f*) The deceased husband of such mother was a resident of New Brunswick at the time of his death, and for at least three years prior thereto;

(*g*) The mother is a British subject and is not an Indian as defined by the Indian Act of Canada;

(*h*) The mother is not in receipt of any allowance, pension or compensation under the provisions of any statute of the Dominion or of the Province of New Brunswick.

The allowance must be approved by the director charged with the administration of the Act, and the mother and children must continue to reside in the Province. The maximum allowance payable under the Act is $60 per month.

The Act is administered by a director appointed for the purpose by the Lieutenant-Governor in Council, acting under a minister of the Crown, and assisted by an advisory commission of three members, two of whom are women. The members of the commission are also appointed by the Lieutenant-Governor in Council, and serve without salary but may be paid travelling expenses and a *per diem* allowance during attendance at meetings. They are appointed for a term not exceeding five years, but are eligible for reappointment.

Women's Minimum Wages

The Minimum Wage Act, which comes into force on proclamation, applies to every female person in any trade or occupation in New Brunswick who works for wages, with the exception of farm labourers and domestic servants. This Act is administered by a Minimum Wage Board, appointed by the Lieutenant-Governor in Council and consisting of two members representing employers, and two representing employees, with a disinterested person as chairman. The chairman holds office during pleasure, and the other members for a term of five years. Members serve without remuneration, but are entitled to travelling expenses and may receive a *per diem* allowance when transacting the business of the Board.

The Board has authority to conduct investigations and establish minimum wages and the maximum number of hours per week for which such wages shall be paid. It also has power to fix overtime rates as well as special rates for handicapped employees and apprentices. It may make different orders for the same industry in different localities, and, upon petition of employers or employees, or of its own motion, may temporarily suspend or vary any of its orders or revise them in accordance with special or changed conditions. All its orders are subject to review by the Lieutenant-Governor in Council.

The Board is further empowered to call a conference consisting of an equal number of representatives of employers and employees in any class of employment for the purpose of reaching an agreement and recommending minimum wages for that class. A disinterested chairman is appointed who may not vote. On receiving the report of the conference the Board may refer any matter of difference to the same or a new conference or forthwith establish a minimum wage.

Regulations may be made by the Lieutenant-Governor in Council governing the procedure of the Board and other matters. Minimum wage orders become effective on publication in the *Royal Gazette*, (New Brunswick). A maximum penalty of $100 for each employee affected, or imprisonment for six months, is provided for any employer contravening an order of the Board. In addition the employer will be ordered on conviction to pay to such employees the difference between the wages actually received and those established by the Board.

Old Age Pensions

The Old Age Pensions Act, which also comes into force on proclamation, enables the government of the Province to enter into an agreement with the federal government for the establishment of an Old Age Pension scheme pursuant to the provisions of the Dominion Old Age Pensions Act. The sums necessary for the financing of the scheme apart from those received from the Dominion government are to be paid out of moneys appropriated by the legislature for the purpose. This Act is to be administered by the branch or department of the government or body of persons designated or appointed by the Lieutenant-Governor in Council.

Advance Polls for Certain Employees

An amendment to the Elections Act provides for advance polls for railway employees, sailors, fishermen and commercial travellers. Such polls are to be conducted in the same manner as other polling stations and are to be open between 7 p.m. and 10 p.m. on two days,

exclusive of Sunday, of the week immediately preceding polling day.

Persons voting at such polls must produce certificates of their right to vote to be obtained from the returning officer. No charge is made for certificates. Penalties are imposed on persons making false declarations or fabricating certificates.

REGULATIONS OF SASKATCHEWAN WORKMEN'S COMPENSATION BOARD

The following new regulations (No. 41) under the Workmen's Compensation Act of Saskatchewan was published in the *Saskatchewan Gazette*, September 20, 1930. Earlier regulations were noted in the LABOUR GAZETTE, August, 1930, page 947; July, 1930, page 765; and in earlier issues.

REGULATION 41

(*a*) Every physician or surgeon attending or consulted upon any case of injury to a workman by accident in any industry within the scope of The Workmen's Compensation Act shall in all cases except as herein otherwise provided report in writing within forty-eight (48) hours of such attendance or consultation to the Workmen's Compensation Board the name of the workman attended upon or consulted about, the name of his employer, the address of both employer and employee, the date and nature of the accident, the date when services were first rendered by the reporting physician and the nature of the services rendered and shall in addition to such preliminary report furnish such other reports as may be necessary during the progress of the case to enable the Board to follow the progress of the case and shall report promptly to the Board the date when the injured workman was first able to return to work and shall in cases of continuing or permanent disability submit such progress reports as may be necessary and shall at all times at the request of the Board make such reports to the Board as may be reasonably necessary for its information and shall at all times promptly complete and forward to the Board any forms sent by the Board to the physician or surgeon for the purposes of reporting on the case being treated.

(*b*) Where any physician or surgeon attends or is consulted upon any case of injury to a workman where it is alleged that by an accident in an industry within the scope of the Act hernia has resulted, the physician or surgeon shall within twenty-four (24) hours after such attendance or consultation report to the Board all the circumstances outlined in paragraph (*a*) hereof and shall report such other circumstances in connection with the injury as shall be relevant to determining whether the hernia is clinical hernia of disabling character and of recent primary demonstrability and shall state frankly and unequivocally whether in his opinion the hernia is due to the accident complained of and shall give his reasons for such opinion and it shall be the duty of such physician or surgeon to endeavour to ascertain from the workman his previous history with a view to determining whether or not the hernia antedated the accident complained of.

(*c*) That no operation for hernia shall be undertaken at the responsibility of the Board without the permission of the Board.

(*d*) That due notice of the time and place of any such proposed operation shall be given to the Board to enable the Board to have a Medical Referee present at the operation and the operating physician shall give the Medical Referee full opportunity to discover during the progress of the operation any conditions or symptoms which would enable the Medical Referee to determine or form an opinion as to whether the hernia in question was due to the accident complained of.

(*e*) The operating physician and the Medical Referee shall each report to the Board within twenty-four (24) hours after the date of the operation and each shall express to the Board his opinion as to the hernia operated upon being due to the accident complained of.

Another recent order amended Regulation 17 (LABOUR GAZETTE, April, 1930, page 394) by adding employment on Provincial Government work to the list of occupations covered by Class 19, group 9. The following new Regulation was added as Regulation 32(a):—

32(a) None of the exclusions of industries made by any of the Regulations numbers 1 to 32 of the Regulations adopted by the Board on the twentieth of March, 1930, and no exclusions made by any subsequent Regulations of the Board unless made expressly applicable to the Crown in the Right of the Province of Saskatchewan shall be deemed to apply to the Crown in the Right of the Province of Saskatchewan nor shall any such Regulations be interpreted to apply to the Crown in the Right of the Dominion of Canada.

The Unemployment Insurance Act which took effect in Germany in October, 1927 (LABOUR GAZETTE, June, 1928, page 627) provides unemployment insurance for workers in specified industries, up to the maximum of 26 weeks of unemployment. The unemployment fund is made up of compulsory contributions from both employers and workers, each paying one and a half per cent of wages, and the public treasury supplementing these contributions as may be found to be necessary. The Act established local labour exchanges, which administer unemployment insurance in addition to their other duties. The unemployment benefits vary in amount, ranging from 35 to 75 per cent of the worker's average weekly wage, extra allowances being made for the dependants of the unemployed person. It is stated that the chief difficulty that has been experienced in the administration of the Act is in connection with the seasonal industries.

TEN YEARS' ADMINISTRATION OF TECHNICAL EDUCATION ACT

THE Technical Education Branch of the Department has published a bulletin (No. 30) under the title "Federal Aid to Provinces under the Technical Education Act for 10-Year Period 1919-1929."

The purpose of the bulletin is to describe how the Dominion Government has assisted the provinces in the development of vocational education under the provisions of the Technical Education Act for the ten-year period 1919-1929. The bulletin gives an extended and detailed account of federal co-operation with the provinces during the above period, including the purpose of the Act, a description of the character and scope of the education and training which have been developed and extended with the aid of federal funds, a statement of the principles and policies adopted by the Department of Labour for the administration of the Act, and an interpretation of certain sections of the law. It also contains copies of reviews prepared by the various provinces and submitted to the Department outlining developments in each province under the provisions of the Act. A list of publications issued by the Technical Education Branch of the Department of Labour is also included.

The policy of the department in administering the Technical Education Act is described as follows:—

There has been no national policy for vocational education, nor has any attempt been made to impose a new organization or system of training upon any province. Each province has undertaken the work in its own way. The Federal Director of Technical Education has never presumed to exercise any administrative control within the provinces, such control being entirely provincial. While it has been recognized from the beginning that the promotion of vocational education is primarily the task of the provinces, it has also been recognized that the Federal Government, in appropriating large sums to the provinces for vocational education, should see that the money was expended for the purposes for which it was appropriated and should upon request assist the provinces in the development of their provincial programs. Bearing in mind these facts, the Technical Education Branch of the Department of Labour has devoted its energies to spreading information about developments in each part of the Dominion and to encouraging co-operative action on the part of the provinces, through conferences and otherwise, so that all might benefit by the experience of each, and there might be in Canada a united effort to develop diversified methods and systems which would meet the needs of each province and community. When solicited, assistance was rendered to local and provincial boards. All provinces manifested an earnest desire to carry out the intention of the Act, and on many occasions the provincial officials expressed their approval of the efforts of the Dominion Government to assist them in promoting the work. Despite the differences in industrial development and educational policies, there has been an increasing tendency towards co-operative action on the part of the provinces.

The Department of Labour has been very careful to avoid interference with provincial authorities and has maintained the most amicable relationships with each province. In administering the provisions and requirements of the Technical Education Act the following policy was adopted:—

1. To accept the work already done in each province and to co-operate with the provincial officials in developing the system of education already established.

2. To give advice freely, but only when solicited.

3. To direct the attention of the provinces to the importance of training for citizenship as well as for employment.

4. To cultivate a spirit of good will and mutual confidence not only between the department and the provinces, but also between the provinces, to the end that there may be a national co-operation in educational effort.

5. To secure through every possible agency the continued sympathy and co-operation of our industrial and labour organizations.

The general progress of the work is summarized in the bulletin as follows:— In reviewing the work for the ten-year period during which the Act has been in force, it is specially gratifying to realize that, as a result of the financial aid rendered by the federal government, real and definite progress has been made and every province has taken steps to establish technical or vocational education as a permanent part of the provincial system of education. The liberal grants available had a marked effect in stimulating building operations. Many splendid, new schools were erected, each suited to the particular local needs. Without such federal assistance it is safe to say that vocational education would not have reached its present stage of development for many years. There is every reason to believe that the grants have been justified by the results obtained.

The bulletin makes reference to special assistance rendered to the provinces as follows: —In addition to money grants, the Dominion Government has assisted the provinces by collecting and distributing, in the form of letters, bulletins, papers, etc., information on all phases of the work. Assistance has also been given in connection with the designing, equipping, and organizing of new schools and in the selection of suitable sites for new buildings. The federal director was frequently called upon to meet local and provincial boards in order to explain the work and tell about developments in other parts of Canada.

At the request of the provinces, several conferences were organized by the Director of Technical Education. These conferences were of great value in developing a better understanding of vocational education and the nature of the co-operative work undertaken by the federal and provincial governments. In calling these conferences the Technical Education Branch undertook in no way to influence discussions or conclusions. Its primary function was that of a co-ordinating agency. In addition, it rendered service by publishing the proceedings of the conferences and placing them in the hands of interested persons.

NOTES ON TECHNICAL EDUCATION AND APPRENTICESHIP

New Courses at Edmonton Technical School

Prevocational Course.—This is a new course outlined by the Department of Education. It is suitable for boys and girls in the fourteenth year or upwards who have completed Grade 6. It is built on the general arrangement of half the students time being given to general training subjects and the other half to practical manual exercises. The boys get a varied experience in the shops and drafting rooms while the girls take the practical subjects of the houshold economics department. The course helps in the selection of a vocation by disclosing special aptitudes and abilities. Pupils successfully covering this course will be granted standing and in the case of those in grade 8 will be given diplomas which in all respects will be equivalent in Alberta to the regular grade 8 diploma.

Technical High School Course.—This new three-year course, as outlined by the Department of Education, will be given for the first time this year. It is not planned to fit into a matriculation or other scheme, but is regarded as an end in itself. The ultimate objectives or aims of the practical or shop subjects which are an important part of the work of the technical high school course are:—To provide a means of general educational development; to provide by proper teaching of processes use of tools and materials, a knowledge of the social value of the products which enter into our daily life; to inculcate an appreciation of a good piece of workmanship and to develop high standards in personal work and habits; to develop a medium for educational guidance; to provide sufficient variation in work to meet the specific needs due to the differences between individuals; to find for those whom economic pressure or other necessity compels to enter occupations early in life some occupation as nearly suited to their ability and capacity as the curriculum can make possible.

Registration at Commerce and Technical Schools, Ottawa

Registration at the High School of Commerce is 25 per cent higher than last term and at the Technical School 12½ per cent higher. According to figures given out by the principal of the High School of Commerce, 950 students have registered. The registration last year totalled 800. At the Technical School 455 students have registered for regular day classes, representing 100 more than last year.

Enrolment at Vocational School, Saint John, N.B.

Enrolment in day classes in the Vocational School at Saint John, N.B., is 601 this year as compared with 401 when the school opened in 1926 and 537 in 1929, according to a report of Mr. Peacock, the Principal of the School. The enrolment this year is divided as follows:—Junior high school, 216; industrial, 93; home economics, 52; commercial art, 13; technical high school, 51; commercial course, 176.

The Federal budget of the Commonwealth of Australia showed that the total number of pensioners under the system of old age and invalid pensions as at June 30, 1930, was 218,500. A review of the operation of the Invalid and Old Age Pension Act, 1908-1926, was given in the LABOUR GAZETTE, September, 1929, page 967. Of the total of 218,500 beneficiaries under the Act, 155,196 were classed as old age, and 63,304 as invalid pensioners. The amount spent in pensions during the year ended June 30, 1930, was £10,792,579, while the cost of administration during the same period was £89,201. The average fortnightly pension payment during the year was 38 shillings and 5 pence.

ONTARIO APPRENTICESHIP ACT

Changes in the General Regulations*

THE Ontario Apprenticeship Act has now been in force for two and one half years and its provisions are becoming fairly well known by employers in the building trades throughout the province. The organization of apprentice training, however, is still in the early stages of development, and it will be some years before the system of apprenticeship which the Act is intended to regulate will satisfactorily meet the needs of all designated trades. Organized labour has continued to support the Act, and certain bodies of employers are co-operating to the fullest extent.

Some employers, however, feel that the system of apprenticeship being developed, while suitable for certain trades, cannot be applied to all designated trades without working hardship on both the employers and apprentices. Differences of opinion cannot be avoided, but those administering the Act feel that the only way to improve conditions is to start with a uniform system and gradually adapt it to the particular needs of each designated trade.

In order to meet these objections, the constitution of the Provincial Apprenticeship Committee has been altered so that trade contractors are now represented by two members appointed annually by the Provincial Builders' Exchange. It is hoped that this change in the method of selecting employers' representatives will result in a better understanding of the Act on the part of trade contractors throughout the province, and bring about closer co-operation between all parties concerned. The Committee, as re-appointed by order in council under date of September 23rd, now consists of the following members:

Representatives of Employers:—Messrs. Geo. Oakley, of Geo. Oakley & Son, Limited, Toronto; J. B. Carswell, of the Burlington Steel Company, Hamilton; W. E. Dillon, sheet metal contractor, Toronto; and Fred Markham, carpenter and general contractor, Toronto.

Representatives of Employees:—Messrs. John W. Bruce, general organizer, United Association of Plumbers & Steamfitters, Toronto; J. F. Marsh, general representative, United Brotherhood of Carpenters and Joiners of America, Toronto; Ernest Ingles, vice-president, International Brotherhood of Electrical Workers, London; and Wm. Jenoves, business agent, International Brotherhood of Bricklayers and Stone Masons of America, Toronto.

Representative of the Technical Branch, Dept. of Education of Ontario:—Mr. F. S. Rutherford, Acting Director of Technical Education, Toronto.

Chairman:—Mr. Jos. M. Pigott, of the Pigott Construction Co., Limited, Hamilton.

Developments to date have, on the whole, been very satisfactory. 1,386 apprentices have been registered, distributed among the various trades as follows:

Bricklayers	163
Masons	12
Carpenters	159
Painters and Decorators	51
Plasterers	95
Plumbers	432
Steamfitters	129
Sheet Metal Workers	135
Electricians	210

Of these registered apprentices, 140 have successfully completed their training periods, and 66 contracts have been cancelled for various reasons. When the Act is in full operation throughout the province, there should be at least 2,500 registered apprentices in the nine designated trades.

Regulations

The most important development during the past few months is the approving of regulations by the Lieutenant-Governor in Council governing the assessment of all employers in designated trades, as provided in the amendment to the Act passed by the last session of the legislature. These regulations provide for the collection of money each year from employers throughout the province to pay for the wages, tuition fees, and railway fares of first and second year apprentices attending special day classes during an eight weeks period in the winter months. Fees and railway fares for boys from larger centres will be paid by the local school boards, but for apprentices sent to classes from small centres, these charges will be shared equally by the Provincial Government and the Assessment Fund. The passing of these regulations necessitated certain changes in general regulations† covering the school training of apprentices, which have also been approved, as follows:

(*a*) Apprentices shall attend special day classes for a period of eight weeks of five eight

*This information was communicated by Mr. A. W. Crawford, Inspector of Apprenticeship for the Province of Ontario.

†The general regulations were published in the Labour Gazette, July, 1929, page 733.

hour days or three hundred and twenty class hours, during each of the first and second years of the apprenticeship period. This day school training may be supplemented by evening school instruction where such an arrangement can be made.

(*b*) Arrangements for these classes shall be made by the Provincial Department of Education through the local school boards and vocational committees.

(*c*) Where suitable day classes cannot be organized in any municipality apprentices shall be required to attend day classes in the nearest centre where such special instruction is available.

(*d*) Apprentices in attendance at day classes shall receive a weekly pay allowance to be fixed by the Provincial Apprenticeship committee.

(*e*) Tuition fees and railway fares of apprentices from outside centres shall be paid by the school boards in the municipalities where the apprentices reside or, in the case of small centres where vocational schools have not been established by employers.

(*f*) Where suitable instruction is available, third and fourth year apprentices shall attend evening classes two evenings per week during the period from October to March inclusive.

(*g*) Apprentices shall pay all charges in connection with evening class instruction.

(*h*) The courses of study in these day and evening classes for apprentices must be approved by the Provincial Apprenticeship Committee.

(*i*) Weekly attendance records shall be furnished by the school to the Minister for each apprentice in day classes.

(*j*) An annual report on each apprentice in day and evening classes shall be submitted to the Minister by the school principal. Forms for this report shall be furnished by the Minister.

Another change in regulations is that affecting the wage rate of apprentices. The rate set by the Provincial Apprenticeship Committee has been changed from a fixed minimum percentage rate in each year to a suggested rate, with a fixed weekly earning capacity in each year of the percentage period, as follows:—

(*d*) It is suggested that the wage rate in designated trade shall be:—

For the first year—15 per cent of the current journeyman's rate in the district when the indenture is signed.

For the second year—20 per cent of the current journeyman's rate in the district when the indenture is signed.

For the third year—35 per cent of the current journeyman's rate in the district when the indenture is signed.

For the fourth year—55 per cent of the current journeyman's rate in the district when the indenture is signed.

In no case, however, shall a contract be approved in which the wage rate is such that the apprentice shall earn less than the following amounts for a forty-four (44) hour week:—

	Per Week
For the first year	$ 6
For the second year	8
For the third year	12
For the fourth year	16

It was found during the past winter that many small employers could not keep their apprentices continually employed and the Provincial Committe has deemed it wise to define "Continuous Employment" as follows:—

"Continuous Employment" means employment for the apprentice by the employer so long as the latter has work to do—but in no case less than 44 weeks per year of the apprenticeship period. In the case of first and second year apprentices, the period of compulsory school training shall count as employment.

This provision should make it possible for any employer interested in the training and development of apprentices to have at least one boy for whom he will be responsible during a four year period.

The Minimum Wage Board of Saskatchewan is holding public hearings at various centres in the province with a view to revising the existing regulations governing the wages and other conditions of female employees in industry. The regulations were last revised about two years ago, becoming effective on September 1, 1928 (Labour Gazette, August, 1928, page 851). The existing orders govern occupations respectively in shops and stores; in laundries and factories; in mail order houses; in hotels, restaurants and refreshment rooms; and in beauty parlours and barber shops. The Board considers that the changes in conditions that have occurred since 1928 call for a revision of these regulations. An opportunity will be given to all persons interested to present their views before any changes are made.

Acadia Gas Engines, Limited, of Bridgewater, Nova Scotia, have adopted a group insurance form of life insurance covering their employees. The amount of benefit varies with the length of service of the employees, being $1,000 for those with less than ten years of service; $2,000 for those under 15 years; and $3,000 for employees of fifteen years or more.

TRADES AND LABOUR CONGRESS OF CANADA

Summary of the Proceedings of the 46th Annual Convention

THE delegates to the 46th annual convention of the Trades and Labour Congress of Canada assembled in the ballroom of the Hotel Saskatchewan in the city of Regina on September 8, to the strains of "O, Canada," played by a local orchestra, followed by an invocation by the Rev. W. H. Adcock, rector of St. Matthew's Anglican Church, of Regina. The welcome of organized labour of the city was extended by Mr. Harry Perry, president of the Trades and Labour Council. The civic welcome was given by Alderman Charles Gardner, acting mayor (owing to the illness of Mayor McAra), who presented Mr. Tom Moore, president of the congress, with a key to the city. The provincial welcome was extended by Premier J. T. M. Anderson, Hon. Mr. A. McPherson, Attorney-General, and the Hon. J. A. Merkley, Minister of Railways and Labour. President Moore replied to the addresses of welcome, after which he declared the convention officially open for the transaction of business.

The first order of business was the report of the Committee on Credentials, of which Mr. F. McKenna was chairman. The report as finally adopted showed that certificates for 225 delegates had been received, the representation being divided as follows:—forty-eight delegates represented a similar number of international organizations which had paid *per capita* tax on the whole of their Canadian membership; one represented a provincial federation of labour; 26 represented trades and labour councils; 7 represented divisions of railroad telegraphers; 141 represented local unions; and two were fraternal delegates, representing respectively the British Trades Union Congress and the American Federation of Labour.

Ald. Rod Plant of Ottawa, was appointed associate secretary, James Burland, of Regina, sergeant-at-arms, Richard Conrad, of Regina, messenger, and L. A. Beaudry, of Montreal, translator.

The following committees, with names of chairman as follows, were selected:—Rules of Order, J. A. P. Haydon, Ottawa; Resolutions, P. R. Bengough, Vancouver; Officers' Reports, F. J. White, M.L.A., Calgary; Constitution and Law, Arthur Martel, Montreal; Audit, Geo. Brunet, Montreal; Ways and Means, C. A. Lock, Toronto; Union Labels, W. B. Lowe, Winnipeg.

Report of Executive Council

The executive committee in the opening passages of their report stated that a great number of matters affecting the interests of the membership of the congress had received their attention during the past year and that at all times there had existed the utmost co-operation between the chief officers and all parts of the jurisdiction of the congress.

Section 1 of the report dealt with the legislative program which the executive had laid before the Dominion Government on January 22, 1930, and included such subjects as:—(1) unemployment and unemployment insurance, (2) Colonization and migration, (3) labour representation on Tariff Board, (4) draft Fair Wages Bill, (5) marine matters, (6) Criminal Code amendment, (7) International Labour Organization conventions, (8) letter carriers' conditions, (9) federal office cleaners' conditions, (10) taxation, (11) electoral reform (12) Railway Act amendments, (13) calendar reform, (14) Alien Labour Act, (15) cadet training, (16) amendments to the Militia Act, (17) prison reform, (18) re-enactment of the Technical Education Act, (19) curtailment of veto power of the Senate, (20) amendments to the British North America Act, (21) amendments to the Bankruptcy Act, (22) extension of the Canada Marking Act, (23) amendments to the Industrial Disputes Investigation Act, (24) encouragement to co-operative trading, (25) legislative effect to the recommendations of the commission which investigated radio broadcasting in Canada.

Section 2 reviewed the 1930 regular session of the Dominion Parliament, reference being made to the matters of more direct interest to organized labour, and included:—(1) Criminal Code Amendments, (2) Fair Wages and Eight-Hour Day Act, (3) labour conditions on bridge construction, (4) eight-hour day for government employees, (5) amendments to the Special War Revenue Act and the Income Tax Act, (6) full-time health units, (7) technical education, (8) cadet training, (9) nationalization of radium supply, (10) nationalization of radio, (11) international peace, (12) unemployment and unemployment insurance, (13) transfer of natural resources from the Dominion to the provinces, (14) British North America Act, (15) Canadian coal, (16) postal workers' salaries, (17) Copyright Act, (18) railway matters, (19) immigration matters, (20) Election Act amendments.

Section 3 contained reports from the provincial executives and federations of labour identified with the congress, and gave a summary of matters coming within provincial jurisdiction which had been brought before the various provincial legislatures.

Section 4 dealt with the relations of the Congress with national and international bodies, among which were (1) International Federation of Trade Unions, (2) International Labour Organization, (3) Dominion Council of Health, (4) Employment Service Council of Canada, (5) National Research Council, (6) British Commonwealth Labour Conference, (7) Canadian Council on Immigration of Women. This section also gave a summary of the proceedings of the recent convention of these bodies.

Section 5 pointed out the importance to Canadian workers of uniformity in social and labour legislation, the executive stating that they had continued to give assistance throughout the year to the provincial executives and federations of labour with this end in view.

Section 6 referred to the passage by the Federal Parliament of the measure respecting the payment of fair wages and the observance of an eight-hour-day on Dominion public works.

Section 7 reported on the representations made by the executive to the Royal Commission on Radio Broadcasting in which they expressed the opinion that control of the air should remain in the hands of the people.

Section 8 dealt with the subject of migration in which it was stated that it is the opinion of the executive council that under the new conditions created by the transfer of the natural resources to the provinces there will be even greater need for the establishment of a Dominion Advisory Council on Immigration to co-ordinate Federal and Provincial colonization activities and to recommend immigration policies suitable to conditions as they exist from time to time. On this body the executive is of opinion that there should be adequate labour representation chosen in agreement with the Trades and Labour Congress of Canada. Pleasure was expressed at the regulations prohibiting the importation of contract labour, and it was stated that there were still reasons why there should be more stringent measures to prevent alien labour being imported to supersede Canadian workers, and to this end it was recommended that efforts be continued to secure amendments to the Alien Labour Act.

Section 9, under the heading of "Unemployment and Unemployment Insurance," referred to the special session of Parliament called for the purpose of dealing with the subject of unemployment and reiterated the proposals of the congress submitted to the government during the past few years, as follows:—

1. To increase the number of jobs available in Canada and stabilize employment to the fullest possible extent by:

(*a*) Exercising control over tariff protected industries so as to compel preference of employment for Canadian labour; observance of hours and rates of wages equal to those adopted by the Federal Government for government works; prevention of stock watering and charging of unreasonable prices to the consumers, and the granting of a tariff high enough to allow of these measures being put into force and yet enable the industry to successfully meet competition in the home market.

(*b*) Generous support of the National Research Council so as to encourage fullest development and use of our natural resources.

(*c*) The carrying on to the greatest extent of public works and the purchase of supplies during periods of depression.

(*d*) The adoption of the recommendations of the 1924 National Conference on Winter Employment particularly with respect to the encouragement of building operations during the winter season.

2. By providing facilities for bringing the workers and the job together by:

(*a*) The abolition of fee-charging employment agencies and the greater development of free employment bureaus administered by the provinces and co-ordinated by the Federal Employment Service, thus insuring uniformity of practice and providing a means of exchange of information as to opportunities for employment throughout the Dominion.

(*b*) The prohibition of entry of contract labour and the restriction of all immigration to such as can be properly absorbed in our national life and for whom there is reasonable opportunity for employment without displacing resident Canadian labour.

(*c*) Financial assistance for transportation of workers to dstant jobs and for temporary work such as harvest work, etc.

(*d*) Co-ordination of seasonal occupations.

(*e*) Assistance for the settlement of industrial workers on vacant land and other proposals of this nature included in our migration program.

3. The establishment of a national system of unemployment insurance based on contributions by the State, the employers and the employee.

Section 10 made reference to the *Congress Journal*, the official monthly magazine of the congress, which it was reported was now in a satisfactory financial position. Affiliated bodies, however, were urged to aid the publication by subscribing.

Section 11 referred to the establishment of the National Research Council and expressed the opinion that its powers should be extended by the Government so as to enable the council to act as a fact-finding body on all questions affecting employment and unemployment, and in general the well-being of those employed in industry, and recommended the creation of an advisory committee of the National Research Council on which one or

more representatives of organized labour should be included.

Section 12 contained a recommendation of the executive to amend the constitution of the congress so as to define the source from which resolutions for submission to the annual conventions may originate.

The concluding section of the report—No. 13—pointed out the efforts which had been made during the year to make known the aims and objects of the labour movement, and also referred to conferences held with the Workers' Educational Association of Ontario, which affiliated bodies were recommended to assist. Trades and Labour councils and federations of labour were also urged to render financial and moral assistance to the Canadian Federation of the Blind.

In addition to the extended report from the provincial executives and federations of labour on legislation in the various provinces the executive also submitted reports from (1) the representative of the congress to the 1930 convention of the International Federation of Trade Unions, and (2) the fraternal delegates to the British Trades Union Congress and the American Federation of Labour.

Unemployment and Unemployment Insurance

The first matter on which the Committee on Officers' Reports reported was that of unemployment and unemployment insurance as contained in the report of the executive council, together with ten resolutions which were submitted on the same subject. The recommendations of the committee were as follows:—(1) concurrence in the action taken by the executive council of the congress and that the incoming executive continue to request a national system of unemployment insurance and a shorter work day, (2) immigration to be restricted to a minimum, (3) that no manufacturer or employer of labour be allowed to import labour into Canada without first having the Employment Service of Canada bulletin such requests in all cities, (4) that the present governments (Federal and Provincial) be requested to enact legislation providing for the establishment of a shorter work-day and a five-day week, and that such provisions be immediately inserted in all government contracts and for work that is subsidized by said governments. The committee also reaffirmed the previous decisions of the congress, that where hours of labour are reduced, whether legislatively or by negotiation between employers and employees, the aggregate earnings shall not be reduced.

Following the adoption of the recommendations of the Committee on Officers' Reports, it was decided to wire the Government at Ottawa asking that measures for immediate relief be adopted. This was approved, and subsequently the Hon. G. D. Robertson, Minister of Labour, replied that the Government had accepted the recommendations of the Employment Service Council, which had previously met at the call of the Minister of Labour. The decisions of the Council were published in the September issue of the Labour Gazette, page 1057.

Report of Committee on Officers' Reports

The Committee on Officers' Reports subsequently reported on the other sections of the report and expressed satisfaction with the work of the executive council during the year, and made the following recommendations:—(1) That amendments be secured to the Fair Wages Act so that its benefits may be extended to apply to all undertakings on which moneys are spent under Dominion Government authorization; (2) that the executive press upon the Government the necessity for a complete revision of the Canada Shipping Act; (3) that continued efforts be made to secure the right to peaceful picketing, (4) that the executive press for certain amendments to the British North America Act.

The committee also reported on two resolutions pertaining to paint-spraying machines, and recommended concurrence in the one asking for protection to the workers who handle such machines and opposed the request for their total prohibition. The report of the committee was adopted.

Report of the Secretary Treasurer

The report of the secretary treasurer, Mr. P. M. Draper, showed the receipts from all sources from August 17, 1929, to August 31, 1930, including the balance from the previous year, to have been $35,110.90, with expenditures amounting to $23,683.91, leaving a balance of receipts over expenditures of $11,426.99. The paid-up membership was reported at 138,887, an increase of 12,249 over the number reported in 1929. Three organizations affiliated their Canadian membership during the year, viz,-International Ladies' Garment Workers' International Union, Hotel and Restaurant Employees and Beverage Dispensers' International Alliance and the Amalgamated Lithographers of America. The secretary stated that the increase in membership during the past four years was 35,850. The report was referred to the Audit Committee which later reported that the accounts were found correct and commended the work of the secretary treasurer.

Appropriations

The Ways and Means Committee recommended the granting of $800 to the fraternal delegate to the British Trades Union Congress and $400 to the delegate to the American Federation of Labour. The committee also recommended that the executive council be authorized to pay the necessary convention expenses. The recommendations were approved.

Amended Constitutions

The Constitution and Law Committee, to which was referred Section 12 of the report of the executive council and one resolution, reported in favour of the suggestion of the council to define more clearly the source from which resolutions should originate in order to be accepted. The recommendation of the executive council was that "No resolution shall be accepted unless submitted by a body directly affiliated to or chartered by the Trades and Labour Congress, and unless signed by the presiding officer and secretary and bearing the official seal of the body submitting the same." This recommendation was adopted. The resolution asked that the personnel of the executive council be increased, each member to represent a certain group of unions. This proposal was rejected.

Union Labels

To the Committee on Union Labels was referred two resolutions. One of these, which was approved, asked re-endorsation of the union labels, working cards and buttons of all legitimate unions as recognized by the American Federation of Labour, and urged the vital necessity of consistency in giving unqualified support to such union emblems to the end that the privileges of organization and collective bargaining may be extended to the fullest extent.

The other resolution directed attention to the fact that union label cigars were again available over a large section of the Dominion and asked support with a view to assisting the cigar makers to maintain their organization in Canada. This resolution also was adopted.

The committee expressed satisfaction with the manner in which the executive council had given publicity to union labels in the *Congress Journal* and called attention to the ruling of the Dominion customs authorities, as reported by the executive council, that the Allied Printing Trades label, if of sufficient size and clarity to be easily readable, is accepted as sufficient to comply with the Marking Act.

The committee recommended that the congress endeavour to make some arrangement with the Union Label Trades Department of the American Federation of Labour whereby printing of union label propaganda matter for distribution to local unions in Canada, now issued free by the department, may be printed in Canada, so that such printed matter may be secured by the various local unions without customs restrictions and inconvenience.

The committee reported in favour of the formation of union label leagues, and urged every assistance being given to union label trades by extending the demand for union label goods. A general discussion on union labels followed the report of the committee, which was unanimously adopted.

Resolutions Presented

As usual, a number of resolutions were not received at the time set for their reception. The chairman explained that the subject matters of these resolutions were in the main covered by resolutions regularly received, and the committee recommended that the belated resolutions be not entertained, a proposal which was adopted. The first resolution presented, which was under the heading of "Safety and Health," directed attention to the reduction of traffic on the railways, due to the competition of motor transport, and asked that the various provincial governments be asked "to place a more equitable tax upon motor transport companies using the highways, or work in conjunction with the Dominion Railway Board, towards making such rates to cover motor transported freight that will bring about a change in the present unfair competition of freight movement carried on upon the highways of the Dominion." The resolution also asked that a protest be lodged with the Provincial Governments "against the dangerous abuse of the highways by motor transport companies and their disregard for the safety of private car owners who use the highways," both requests were approved by the convention.

Under the heading above-named the convention approved of resolutions asking for legislation to provide for (1) the licensing of men operating gas or electric driven shovels, cranes or similar machines; (2) that laws be enacted requiring automobile owners to carry property and accident insurance, state insurance to be sought; (3) that unloading machinery on vessels be placed in charge of a certified marine engineer of not lower grade than third class who would be attached to the engine room staff, and under the supervision of the chief engineer; (4) that workers

in the electrical industry in the province of Ontario be compelled to pass an adequate examination and be licensed showing their ability to install and maintain electrical wiring and equipment; (5) the erecton, operation and supervision of hoisting appliances in building and construction operations to be adequately protected; (6) the protection of workers from hot rivets, tools or other objects on iron or steel structures; (7) the examining and licensing of those who install and maintain plumbing and steamfitting equipment; (8) health insurance in all provinces of the Dominion.

On the recommendation of the committee it was decided to refer to the Dominion Fire Prevention Association the matter of young children being left alone in homes with a view to some steps being taken to prevent the number of fatalities from fire which annually occur.

Eight Hour Day for Taxi Drivers

Under the heading of "Hours of Labour" the convention approved of a resolution asking for legislation to provide for an eight-hour day for drivers of trucks, buses and taxi cabs.

Approval was also given to a resolution asking that an eight-hour day be granted to employees of the Dominion penitentiaries, as well as to a request for the three-platoon system for all fire fighters.

Fair Wages on Government Contracts

A resolution was adopted declaring that complaints had been made relative to the wages paid on contracts and other work directly or indirectly financed by the provincial governments, and asked that the provincial executives urge that in all work on which provincial funds are expended a fair wage clause providing for the eight-hour day and 44-hour week be inserted, and that such fair wage policy should cover all provincial government work whether undertaken directly by the governments or by other bodies or contractors on their behalf.

The convention approved of legislation being sought to give power to the various departments of labour to compel all commissions and other groups privileged to spend public moneys to abide by the regulations of the departments as to wages and working conditions on all works undertaken by such commissions either by contract or otherwise.

Other resolutions approved were as follows:—(1) in favour of uniform regulations on Government contracts, whether or not the works are under direct or indirect control of the Federal or Provincial Governments; (2) in favour of the prevailing rate of pay being paid to pattern makers in the employ of the Montreal Harbour Commission; (3) that on public buildings the specifications shall contain the rate of wages that shall apply for all classes of labour on the job, the wages to be paid by the public body letting the contract, and the employees to be paid in cash each week by a paymaster who shall be named by the body who awards the contract; (4) that the municipal authorities of Montreal be asked to establish the eight-hour day and insert a fair wage clause in all their contracts; (5) that the executive council submit a draft bill on fair wages to the Montreal City Council with a view to having the same adopted to govern municipal contracts; (6) that the Minister of Labour be asked to fill the vacant position of fair wage officer in the province of Quebec.

One Day's Rest in Seven

A resolution set forth that certain large industries were violating the law by forcing their employees to work seven days per week, and asked that the matter be brought to the attention of the proper authorities by the executive of the congress, with a view to prosecuting those establishments which are known to be deliberately violating the law. The resolution was adopted.

Holidays with Pay

The convention went on record as approving of three weeks' holidays with pay each year for fire fighters by reason of their having to work on holidays which are granted to certain other classes of municipal employees.

Conditions of Employment

The first resolution under the above heading called attention to what were declared the inadequate salaries paid to letter carriers under the compensation set by the Civil Service Commission and asked that the Postmaster General through the treasury board be empowered to set the salaries of letter carriers. This was adopted.

Concurrence was given to a resolution asking that fishing trawlers operating off shore and tug boats when making special voyages outside harbour without the proper quota of certificated deck and engineer officers be compelled to take out "Seamen's Articles of Agreement" so as to prevent the violations mentioned.

Opposition was expressed to the tendency of employers to lower the age at which workers are refused employment by governments and corporations. Approval was given

to a resolution seeking the stabilization of employment for maintenance-of-way employees.

Hiring of Labour

The convention approved of a resolution asking for the complete abolition of private fee-charging employment bureaus, and also endorsed a request that legislation be secured providing that where a strike exists and the employer advertises in the press for labour, the employer should be required to set out in the advertisement that a strike exists.

Minimum Wage

Approval was given to a resolution asking that the provisions of the various provincal Minimum Wage Acts be extended to towns and villages where such are not now included with a view to giving protection to girls and young women who are working excessive hours. It was also decided to instruct the provincial executive of Quebec to press for amendments to the Minimum Wage Act that will ensure adequate protection to all female workers employed in both industry and commerce in the province.

Picketing

On this subject a resolution set forth that members of a *bona fide* labour organization had been fined by a magistrate in Hamilton for what it was contended was their legal right to peacefully picket. The resolution, which was adopted, condemned the action of the magistrate, and asked that the protest be given the widest publicity "with a view to having such unwarranted action and infringment upon the rights of labour discontinued."

Tariff and Economic Policy

A resolution dealing with the budget as brought down by the former government set forth that as the tariff changes would be of financial gain to certain industries, which it was declared were working their staffs under intolerable conditions, long hours and seven days per week, thereby aggravating the unemployment situation, asked the convention to "go on record as being entirely opposed to any industry receiving any financial gain through the tariff until such industry is prepared to pass on to labour some of the benefits given them by tariff adjustments." The Commitee on Resolutions recommended concurrence in the resolution, which after some discussion was adopted by the convention.

The convention also approved of a resolution in favour of the Dominion Government giving encouragement to the steel shipbuilding industry in Canada.

Industrial Disputes Investigation Act

The following resolution asking that the Industrial Disputes Investigation Act be adopted by the provinces of Quebec and Ontario was adopted unanimously:—

Whereas, by decision of the Privy Council, the Industrial Disputes Investigation Act, 1907, has been declared "ultra vires" when applied to public utilities and corporations holding incorporation and operating within provincial boundaries; and whereas, in the interest of industrial harmony it is desirable that the said legislation should be permitted to function universally throughout the Dominion without hindrance; and whereas, pending suggested amendment to the British North America Act that would permit of such a course, enabling legislation be sought from the Provincial Government that will allow of such action; and whereas, up to date, all provinces, with the exception of Ontario and Quebec, have agreed and enacted such enabling legislation; therefore, be it resolved, that the incoming Executive Committees of both these provinces be instructed to press upon their legislators the enactment of the necessary legislation.

Mothers' Allowances

The convention endorsed a resolution seeking to secure the enactment in the province of Quebec of legislation providing for mothers' allowances and maternity benefits. Approval was also given to a request that efforts be made to have the Ontario Mothers' Allowance Act extended so as to include a mother with one child.

Workmen's Compensation

Several resolutions dealing with the subject of workmen's compensation were submitted, the first being a request that the executive committee for the province of Quebec again press for amendments to the present law with a view to (*a*) the elimination of the anomalous clauses existing in the Act, and (*b*) the institution of the collective liability of industry. The convention also approved of amendments to the Quebec Workmen's Compensation Act providing increase in the allowances provided in the law and also that all employees be included. A resolution set forth that as workmen's compensation acts do not cover accidents which occur in places where motive power is not regularly used, such as sheds, warehouses, etc., that efforts be made to have the acts extended so as to protect all classes of workers. This was adopted; as were also resolutions asking (1) that cooks and waiters be provided for in the Ontario Workmen's Compensation Act; (2) that dermatitis be included in the various acts as an occupational disease; (3) that em-

ployers should be prohibited from deducting from employees' wages any proportion of compensation that is paid to the employees by the Workmen's Compensation Board on account of partial permanent disability resulting from injury received while working for the employer; (4) that employers should not be allowed to intimidate employees by the issuance of demerit marks or in other ways reprimanding them for alleged carelessness because of their having reported minor accidents.

Three resolutions desiring amendments to the Ontario Workmen's Compensation Act were referred to the special congress committee considering the subject of changes in the law. The requests were:—(1) that in cases of disputes over a claim under the compensation act a committee of three be appointed to investigate, the committee to consist of one representative of the compensation board, one by the person making the claim and one neutral person, the latter to be chosen by the two first named representatives; (2) for the appointment of an advisory board by which cases of a doubtful nature coming under the Workmen's Compensation Act could be reviewed; (3) that active measures be taken by the congress to have certain proposed amendments to the Ontario Workmen's Compensation Act which are in accord with the findings of the special congress committee on Workmen's Compensation presented to the next session of the Ontario Legislature.

Old Age Pensions

Eight resolutions on the subject of old age pensions were reported favourably upon by the Committee on Resolutions, the first one being in favour of old age pensions being made a Federal undertaking. The remaining resolutions were:—(1) that the Provincial Legislatures which have not yet adopted the old age pension law be urged to do so; (2) that the Old Age Pension Act be amended so that a change of residence within the British Empire shall not deprive an otherwise qualified pensioner from receiving a pension; (3) that the clause in the pension law requiring a pensioner to have resided in the province in which the application is made for the five years immediately preceding the date of application be changed so as to make possible the payment of pensions to any one who has resided in a "pensionable" province or provinces for a period of twenty years or more; (4) that free medical and surgical treatment be provided to all persons in receipt of pensions; (5) that the old age pensions regulations be so amended that any income which, together with the old age pension, does not exceed $100 per month shall not make the applicant ineligible for pension; (6) that the Ontario Government be asked to increase the personnel of the Old Age Pensions Commission with a view to the commission being better able to review the cases sent forward from the local boards, and that a fully qualified labour representative be included in any addition to the commission; (7) that the Dominion Government be asked to adopt a Federal scheme of old age pensions for all needy persons of the age of 65 and also remove some of the restrictions from the regulations.

Migration

The convention concurred in a resolution asking that all subsidizing of emigrants be discontinued, and that the governments cease to sanction advertisements by any agencies to induce immigration, and that an immigration board be established representative of the various interests in the country, and on which labour shall have adequate representation.

Another resolution asked that the Dominion Government be urged to prohibit all immigration until such time as conditions have become normal. This was approved, as was also a request that the Dominion Government be asked to strictly enforce the provisions of the Order in Council prohibiting the entry under contract of foreign workers into Canada.

Sale of Beer and Wine

Under this heading the convention adopted a resolution instructing the Quebec provincial executive committee to press for amendments to the liquor law of that province so as to permit the sale of beer and wine in licensed taverns throughout the province "in conformity with the expressed wishes of the electorate."

Another resolution which was adopted seeks to have the Ontario Liquor Control Act amended so as to permit the sale of beer and wine in licensed places for beverage purposes.

Amendments to Election Act

Approval was given to a resolution asking that the Election Act be amended so as to provide for a separate poll for persons who are employed on vessels in the public service of the Dominion and who are not at their regular headquarters on election day.

The convention went on record as disapproving of the action of the Ontario Government in amending the election law so as to require a $200 deposit for candidates contesting provincial elections.

Cost of Living and Housing

Endorsation was given to a resolution asking that the Federal and Provincial Governments appoint a commission to investigate the high cost of bread and other foodstuffs, with a view to ascertaining if a reduction in the present prices of these commodities cannot be effected.

The convention also approved of all provincial Governments being requested to appoint commissions to investigate the housing conditions of the poorer classes in the cities and towns of the Dominion.

Labour Statistics

The following resolution was adopted unanimously by the convention:—

Whereas, the labour Department at Ottawa is maintained for the benefit of organized labour throughout the Dominion; and whereas, it has been shown that this Department does not receive the support it is entitled to from local unions in the way of sending in information and statistics that are required for the proper workings of the Department, thereby to some extent retarding its full usefulness; therefore, be it resolved that this convention urge upon all local unions and councils affiliated with the Congress the utmost necessity of giving the fullest co-operation to this Department at all times, as by so doing we are only protecting our own interests.

Another resolution along the same lines was introduced, but as the adopted resolution covered the subject matter no action was taken in regard to it.

Other Resolutions

The convention approved of other resolutions as follows:—(1) that the pay of jurymen be increased; (2) that the governments of Ontario and Quebec be requested to cause the paper companies to limit operation periods of the pulp and paper mills in such a way as to effect an equal distribution of orders or equal operating time; (3) that the Dominion Government be asked to insert in all contracts a clause demanding that all materials entering into said contracts be of Canadian manufacture, and if it is not possible to procure the materials in Canada, then the British Empire to be given preference; (4) supporting the World's Grain Conference which is to be held in Regina in 1932.

In regard to a resolution asking the Congress to recognize the newly formed Labour Party of Ontario as the official party in the province, the convention reaffirmed the policy of the congress as enunciated in 1923 and 1924 wherein labour political autonomy is vested in the organization formed for such purpose.

Fraternal Messages

Mr. P. M. Draper, Secretary-Treasurer of the congress, occupied the chair during the delivery of the fraternal addresses and introduced the speakers. The first address was by Mr. Adolf Kummer, of Cincinnati, Ohio, member of the Brewery Workers' International Union, fraternal delegate from the American Federation of Labour, who extended the greetings of that organization. Mr. Kummer referred to the economic conditions in the United States which had brought on such widespread unemployment. He pointed out that the organized labour movement in that country as a means of relieving the existing conditions stood for the maintenance of the present wage scales and the shortening of the working day and the working week. He thanked the members of the congress for the support given to the brewery workers in their organizing campaigns in the Dominion. The speaker said that the labour movement of the United States stood for moderation in all things and they were opposed to the prohibition laws in that country and hoped for some changes in statute which unlike the Canadian liquor laws, was a national enactment.

The greetings from the British Trades Union Congress were presented by Mr. W. Mansfield, Labour member of Parliament for North Yorkshire, England, who pointed out that the problems confronting labour in Great Britain were similar to those in Canada. He referred to the great sacrifices made by the pioneers of the labour movement in endeavouring to secure common justice for all mankind, and stated that the workers in Great Britain had been compelled to revert to political action for the purpose of protecting their industrial achievements. Referring to the unemployment situation in Great Britain, he outlined the causes which had robbed the Mother Country of her export market for various commodities, and stated that there were over 2,000,000 unemployed persons, to whom the Labour Government was paying unemployment benefits. Mr. Mansfield appealed to the delegates for some form of co-operation whereby Great Britain would be able to purchase her wheat supply from Canada. He referred to the large number of accidents in industry and the efforts being made in Great Britain to secure ample compensation for accidents; also to the efforts made to reduce the working hours of miners and other classes of workers, which he believed would only be gained by national ownership of the mines. Referring to the huge sums spent for war debts and armaments Mr. Mansfield stated that 75 per cent of the

revenue of Great Britain was used for these purposes. He believed that universal peace could only be secured by international working class solidarity and concluded with a stirring appeal for the support of organized labour in working for international peace.

On conclusion of their addresses each of the fraternal delegates was presented with a gold fraternal delegate's badge.

During the course of the convention fraternal messages were received from (1) Bricklayers, Masons and Plasterers' International Union, and the Commercial Telegraphers International Union, both of which were meeting in Montreal; (2) Canadian Legislative Board of the Brotherhood of Firemen and Enginemen; (3) Bridge, Structural and Ornamental Iron Workers, International Union; (4) Hotel and Restaurant Employees' and Beverage Dispensers' International Alliance; (5) International Brotherhood of Boilermakers and Iron Shipbuilders; (6) Executive Council of the American Federation of Labour; (7) Photo-Engravers' International Union; (8) Hon. Senator G. D. Robertson, Minister of Labour.

On behalf of the delegates, the fraternal delegate from the British Trades Union Congress was presented with a gold watch; the delegate from the American Federation of Labour was the recipient of a signet ring, watch chain and knife; his wife receiving a gold brooch; Mr. Harry Perry, the chairman of the local entertainment committee received a chain and knife and Mrs. Perry a crystal necklace.

Officers Elected

The election of officers, which took place on Thursday afternoon, resulted in the election of the former members of the executive council as follows:

President, Tom Moore, Ottawa.

Secretary-Treasurer, P. M. Draper, Ottawa.

Vice-Presidents, R. J. Tallon, Calgary; John T. Foster, Montreal, and James Simpson, Toronto.

Provincial Executive Committees were named as follows:

Quebec—Pierre Lefèvre (chairman), Montreal; Omer Fleury, Quebec; Phil. Corriveau, Montreal; J. A. D'Aoust, Three Rivers.

Ontario—Ald. Humphrey Mitchell (chairman), Hamilton; Ald. Rod Plant, Ottawa; Tennyson Jackson, Toronto; R. H. Hessel London.

Manitoba—F. Mackintosh (chairman), Jas. Graham, R. W. Hill, and W. B. Lowe all of Winnipeg.

Saskatchewan—H. Perry (chairman), Regina; A. M. Eddy, Saskatoon; Wm. Stephenson, Moose Jaw; H. D. Davis, Prince Albert.

British Columbia—Colin McDonald and Fred A. Hoover, of Vancouver, the two other members to be chosen one each by the trades and labour councils of Victoria and Prince Rupert.

The selection of the Nova Scotia executive committee was referred to the executive council. The provinces of New Brunswick and Alberta having federations of labour chartered by the congress, no committees are named.

Fraternal delegate to the American Federation of Labour, W. Stephenson, Moose Jaw.

Fraternal delegate to the British Trades Unions Congress, Robt. Livett, Calgary.

Vancouver, B.C., was named as the city in which the convention for 1931 will be held.

Among the entertainment provided for the delegates and visitors to the convention was a banquet and dance at the Hotel Saskatchewan on Monday evening, followed by a similar function in Moose Jaw on Wednesday evening, to which place the delegates were conveyed by automobiles.

THE TRADES UNION CONGRESS OF GREAT BRITAIN

THE 62nd Annual Trades Union Congress was held at Nottingham on 1st September and the four following days. The President was Mr. John Beard, Chairman of the General Council.*

The number of delegates appointed to attend the Congress, as shown in the Statistical Statement compiled by the General Council, was 606; the number of organizations affiliated to the Congress (including those organizations, with a membership of about 65,000, which did not appoint delegates) was 169, with a membership of approximately 3,744,000.

The figures of trade union membership represented at the Congress show very little change in any of the groups except "Other Transport" and "General Labour," which are affected by the transfer of a large membership from the latter to the former group, consequent upon the amalgamation of the Workers' Union with the Transport and General Workers' Union. The increase shown in "Other Transport" is also due in part to the re-affiliation of the National Union of Seamen; and it is to this re-affiliation that the increase in the total membership is mainly due.

The Chairman in his opening address dealt with two important developments which had

*This account of the proceedings of the Congress is based on a report appearing in the *Ministry of Labour Gazette*, September, 1930.

occurred during the year, *viz.*, the trade union relations with organized employers, and the issue of the Memorandum on "the position of the British Commonwealth in relation to the world economic situation."

The principal business of the Congress was the consideration of the General Council's Report, covering their work during the past twelve months; also the agenda containing resolutions, and amendments, on various labour questions, which had been submitted by the various affiliated trade unions or (as regards one resolution) by the General Council itself.

The method by which the Congress deals with these two main parts of its business—the General Council's Report, and the resolutions and amendments which appear in the agenda—is to invite endorsement of the Report section by section, and simultaneously to take any resolutions which bear upon the subjects treated in the section under discussion.

The questions discussed included (*i*) the Memorandum (referred to above) dealing with the position of the British Commonwealth in relation to the world economic situation, which had been published by the General Council and had attracted considerable attention, and

Family Allowances

(*ii*) the question of family allowances, which had been jointly discussed by a Committee consisting of seven representatives of the Trades Union Congress General Council and seven representatives of the Labour Party. This joint body had been unable to agree, nine having signed a majority Report, the main recommendations of which were:—

(*a*) That family allowances be paid out of public funds, in respect of each child from birth to the school-leaving age for the time being in force; and

(*b*) That the allowances be at the rate of 5s. per week for the first child and 3s. per week for each succeeding child;

while three signed a minority Report, which recommended that, prior to any decision on family allowances being taken, certain social services (named) should be fully established out of public funds. The General Council had already notified their approval of the minority Report.

Both these questions arose out of the General Council's Report, and were discussed on motions to refer the matters back.

In the debate on family allowances, the General Council's spokesman, in urging the Congress to adopt their view (which, as already stated, favoured the minority Report) advanced reasoned arguments against the family allowance proposals, pointing out that the cost alone made it impracticable. To continue to adopt proposals which would cost hundreds of millions without consideration of how and when the money would be obtained would tend to destroy the value of the Congress. He also submitted that such a method of giving assistance would have a detrimental effect upon trade unionism.

The proposal to refer the matter back, with a view to favourably considering the majority Report, came from an influential section of the Congress. The question of cost was compared to the vastly greater amounts spent during the War; the fear that trade unionism would suffer was controverted. The card vote resulted in 1,347,000 for reference back and 2,154,000 against. The action of the General Council was therefore approved.

Economic Policy

The debate upon the Economic Memorandum was well sustained, considerable opposition being shown, the main objections alleged being the Memorandum's lack of clarity; its apparent conflict with the international policy of the Congress; its effect upon the great exporting industries (*e. g.*, mining); and its resemblance to the imperialist proposals of certain newspapers. The General Council's spokesmen sought to show that their Memorandum had no relation to any tariff arrangements; that essentially it was an effort to create a definite independent trade union trading policy, which was necessary in view of approaching Commonwealth Conferences; that it aimed at investigating the possibility of controlling and regulating the vast raw material resources of the Commonwealth with a view to trade. The reference back was lost on a card vote by 1,878,000 votes to 1,401,000.

The Miners' Federation of Great Britain submitted a resolution asking the Congress to express their opinion that all workers in and about coal mines should be organized in the Miners' Federation of Great Britain. This aroused considerable opposition, as, if passed, it would seriously affect many unions which have long been represented at Congress, such as those of colliery enginemen, by-product men, engineers and craftsmen, etc. Efforts were made to avoid a definite vote, and ultimately, the question was referred to the General Council.

A resolution was passed unanimously instructing the General Council to press, at the opening of the next Session of Parliament, for a repeal of the Trade Disputes and Trade Unions Act, 1927, and for the restoration of the trade unions to the legal position occupied by them prior to the passing of the 1927 Act.

Pensions at 60

A resolution was carried calling attention to the possible dangers of rationalisation; directing the General Council to watch its tendencies; urging the necessity for reducing hours in order to limit labour displacements; calling for adequate compensation for persons displaced, and pressing for adequate State pensions for persons over 60 years of age. As originally submitted this resolution called for pensions at 65 years of age, but on its being pointed out that this infringed one of the Standing Orders of Congress, which calls for "adequate State pensions for all at the age of 60," the resolution was altered so as to comply with the Standing Order.

Unemployment, wages, hours, etc.

The Congress declared its recognition of the tendency towards the increase of unemployment; urged the members of affiliated unions to support Labour, so that definite socialistic policies could be introduced, and instructed the General Council to submit to the Prime Minister that such emergency measures should be taken as would enable employment to be offered on trade union rates and conditions to the surplus able-bodied workers which capitalism fails to employ.

A resolution asking the General Council to consider the inauguration of a campaign with the object of urging the Government to introduce legislation to secure a 44-hour working week, inclusive of meal times, was passed.

A decision was arrived at supporting the recent attempt to pass a Bill in Parliament limiting the hours of labour of shop workers to not more than 48 hours a week; also urging the Government to promote effective legislation covering sanitation, ventilation, and heating of shops, warehouses, and offices.

A resolution re-affirming the demand for payment for holidays for all workers was passed.

A resolution was passed calling for an alteration of the Fair Wages Clause, so as to make it compulsory for firms to employ only trade unionists, not only on any public contracts, but also in their ordinary business. Also that the General Council urge the Government to insist on the Fair Wages Clause being recognized by the Unemployment Grants Committee.

A resolution was passed requesting the Government to increase the existing wages limit for non-manual workers in National Health and Unemployment Insurance from £250 to £500 per annum. Also that rates of benefit payable for sickness and disablement should be provided within the National Health Insurance Acts equal to those payable for unemployment, and that benefits be payable for wives and dependants. Resolutions were also passed directing attention to the need for the co-ordination of medical services, and calling attention to the tendency to set off social services against higher wage standards.

A resolution was passed calling upon the Government to finance national requirements on the credit power of the nation, without having recourse to the Bank of England.

A resolution was passed deprecating the employment of aliens and undersirable coloured labour on British ships.

A resolution was submitted calling for the amendment of the Hours and Industrial Employment Bill, so that the section excluding from the operation of the Bill members of the employer's family shall not apply to persons employed in the transport of goods by motor or horse-drawn vehicle. It was pointed out that this proposal was not in line with the Washington Hours Convention, to which the Congress was committed, and the resolution was dropped.

A comprehensive resolution was carried suggesting that a scheme for the registration and licensing of carriers should be instituted, and that the provision in the Road Traffic Act for the better regulation of passenger road transport services should be extended so as to include the road transport goods services.

Resolutions were passed requesting amendments of the Factory Acts in relation to the high mortality among casters and polishers, also the necessity for employers to provide workshop accommodation for their workpeople; also for a revision of regulations so that adequate provision for public safety at all places of public entertainment might be ensured.

A resolution was submitted calling attention to the national service rendered by trade unions, and asking that a subsidy of an amount equal to one-fifth of the benefit paid by any Society should be provided by the Government. Opposition to this proposal was shown by representatives of the General Workers and of the Shop Assistants, and the previous question was moved and carried.

The Miners' Federation moved a resolution directing attention to the international character of the economic problems in the coal mining industry, and requesting the General Council to press for international agreements for the regulation of the coal trade, with uniform hours of labour, and adequate standards of living for the mine workers of all countries. Emphasis was placed upon the difficulty of improving conditions in this country unless the standards were applied internationally.

In the election of the General Council Mr. W. R. Townley, National Union of Boot and Shoe Operatives, takes the place of Mr. Poulton of the same Society, who has retired. Mr. J. Hindle, Amalgamated Weavers, takes the place of Mr. Ogden, deceased.

RECENT LABOUR UNION ACTIVITIES

International Federation of Trade Unions

REFERENCE was made in the LABOUR GAZETTE, July, 1930, page 741, to the fifth congress of the International Federation of Trade Unions, then in session at Stockholm, Sweden, at which the Dominion was represented by Mr. J. T. Foster, vice-president of the Trades and Labour Congress of Canada, an affiliated organization.

One of the discussions of primary importance centered about the new economic policy and program of social legislation that had been drafted by a committee of experts and approved by the General Council of the I.F.T.U. for submission to the Congress. The policy so formulated was not regarded as a definite program but merely as containing guiding principles for the activities of the general body and its affiliated national centres. The Congress considered the draft policy and decided to compile a social legislation program "in order to conduct in all countries an effective campaign to generalize social legislation which will protect the worker against the prejudicial effects of all the evils perpetually threatening him—evils which are aggravated by the conditions inherent in the social order under which we live."

As a basis of further developing the study and propaganda of social legislation in various countries, it was considered that the program should be classified under the following heads.

Social Insurance.—(1) Sickness insurance (including medical treatment and medicaments); (2) invalidity insurance; (3) old age and survivors' insurance; (4) death insurance; (5) unemployment insurance; (6) maternity insurance; (7) accident insurance (workmen's compensation); (8) occupational disease insurance; (9) family allowances.

Special Protection.—(1) Working hours and questions connected therewith; (2) workers' holidays; (3) protection of children, young persons and women, the prohibition of night-work for women and children, and the (prohibition of the employment of young persons and women in unhealthy occupations); (4) vocational and technical training and apprenticeship; (5) liberty of association, the right to strike and the right to hold meetings; (6) the labour contract; (7) collective agreements and in connection therewith, the question of conciliation and arbitration; (8) labour law, labour courts, works' councils, etc.; (9) the weekly rest-day; (10) vocational guidance; (11) hygienic regulations.

Supervision and Prevention.—(1) Factory inspection, especially in connection with the application of hygienic legislation and hygienic administrative measures in factories, both in respect of the treatment of the staff and of the sanitary arrangements of the factories themselves and rational protection of the health of young apprentices; (2) the right of trade unions to be consulted and to colloborate in the measures to be taken in the factories themselves for the protection of workers; (3) the prevention of industrial accidents, primarily by the application of more and more rational measures in respect of machinery, etc., and secondarily, by the education of the workers by posters, information and the use of photographs, etc. in labour and other publications.

With reference to the above program, the Congress instructed its executive committee to study and compile a complete program after consultation with the affiliated organizations, and also authorized the General Council to observe the results of this survey so as to determine the measures to be taken in order to attain the various objectives advocated in the social legislation program.

The Congress was attended by 186 delegates, including fraternal delegates, representing 22 national centres affiliated with the I.F.T.U. with an aggregate membership of 13,470,349.

Mine Workers Union of Canada

The fifth annual convention of the Mine Workers Union of Canada was held at Calgary, Alberta, September 8-13, 1930, with approximately twenty-five delegates in attendance, President James Sloan in the chair. The report of the president reviewed the conditions and activities in the various sub-districts under the jurisdiction of the union. Vice-president L. Maurice, who assumed office on September 2, also presented a report. The report of the secretary-treasurer showed the average paid-up membership during the year to be 3,282. Fraternal delegates representing the Communist Party of Canada, the Workers Unity League and the Young Communist League addressed the convention. Two representatives of the Canadian Defenders in Canada were also given the privilege of addressing the delegates.

Among the recommendations of the committee on officers' reports that were adopted by the convention were the following:—

Concurring in the action of President Sloan in calling a strike at Mercoal;

Withdrawing the affiliation of the Mine Workers Union with the All-Canadian Congress of Labour:—

That the District President relinquish the position as secretary of the Workers Unity League;

That all local units withdraw their support from the Canadian Labour Party.

Other resolutions adopted by the Convention were as follows:—

That the Dominion and Provincial Governments institute immediately a system of non-contributory unemployment insurance, to be administered through the local unions;

Asking the Provincial Government of Alberta that, if necessary to give winter relief work, the workers be paid at least fifty cents per hour;

Weekly pay-day instead of the bi-monthly system;

That no more miners' certificates or provisional permits be issued for the next five years, or until the industry can absorb those already possessing them, except boys already employed in the mines coming to the age of 18 years, and miners holding certificates from other provinces in Canada;

A six-hour day with no decrease in the union scale of wages;

That the provincial governments of Alberta and British Columbia appoint a commission to look into the coal industry and conditions prevailing in all coal mining camps in eastern British Columbia and Alberta;

That an automatic recording pressure gauge be used in connection with every ventilating fan in all the larger mines, and that a competent person be appointed to watch the indicated pressure.

Amendments to the Workmen's Compensation Act were desired, providing that a hundred per cent of wages be paid in compensation instead of 66⅔ as at present; that a widow's allowance be increased to $50 per month; that the allowance to old couples for the loss of only support be increased to $50 per month; that an appeal board be established, to which the decisions of the compensation commissioners could be appealed; that all persons coming under the Act be paid on the basis of income of $2,000 per year.

That $100 be donated to the dependents of those who lost their lives in the Coalmont mines disaster;

That fire-bosses be placed under the direct control and pay of the Government;

That the strike at Mercoal be continued;

Approving the proposal to set up a strike fund by assessing the members of the District organization, one dollar per member per month;

That a referendum vote of the membership be taken on the following questions: "(*a*) Are you in favour of affiliation with the Workers Unity League?" and "(*b*) Are you in favour of an extra five cents per capita tax per month?"

Federated Association of Letter Carriers

The Federated Association of Letter Carriers recently held its annual convention in Calgary with approximately 40 accredited delegates in attendance.

Among the important resolutions presented were those concerning promotion, retirement, superannuation, and salary schedules, most of the resolutions being first reviewed by a Resolutions Committee. This committee's recommendation of concurrence in a resolution which called for full pension to letter carriers permanently disabled by injury while on duty, was adopted, as was also a rider that in event of death the wife of a carrier shall be entitled to half pension. The convention adopted another pension resolution which recommended that after 25 years service letter carriers shall be entitled to a pension, independent of retirement fund, similar to that given railroad employees, and entirely defrayed by the government.

Re-affirming its former attitude on the matter of salaries, the Association recommended that salary schedules be established under the jurisdiction of the Postmaster-General without reference to the Civil Service Commission. The organization also re-endorsed the policy of fixing a salary rating for letter carriers equal to that which obtains in the United States for letter carriers in that country.

On the question of holidays, the convention decided that "the holiday period of 10 months is unsatisfactory since many carriers are compelled to take holidays in unseasonable weather." Accordingly the executive officers were instructed to request that the period during which holidays may be taken be reduced to six months—May to October.

Other subjects dealt with concerned uniform and equipment, leave of absence for military service, household delivery of mail, delivery of mail during Christmas holiday season and

during the Jewish New Year season, suitable working quarters, etc.

The officers elected were: President, B. W. Rehder, London; first vice-president, J. W. Fitchett, Toronto; second vice-president, J. Sauvé, Montreal; third vice-president, Tempest Aitken, Edmonton; secretary-treasurer, John J. Reeves, Toronto.

NOTES ON INDUSTRIAL SAFETY AND HEALTH

Plan for Reporting Causes of Accidents

The Safety Educational Department of the Public Service Corporation of New Jersey recently adopted a tabulation of the causes of industrial accidents. Mr. A. J. Van Brunt, the director, in the *National Safety News* (May, 1930) explains the use of the tabulation as a means of ascertaining the exact causes, each accident being recorded as it occurs with the appropriate tabulation number. "Accident reports," he says "should have on them a tabulation number which refers specifically to the cause, not the result, of the accident." The tabulation is as follows:—

Supervision Failure.—

1. Class of work beyond experience or physical or mental ability of injured.

(The injured was assigned work or permitted to perform work which was beyond his experience, or normal physical or mental ability. Do not confuse with No. 14.)

2. Use of improper tools or devices.

(The injured was instructed to use improper tools or devices, or used them without, or contrary to, instructions. If tools or devices were defective, see No. 6.)

3. Lack of proper instructions.

(The injured was not given necessary or proper instructions as to the manner in which the work was to be done, or as to the danger involved in the work.)

4. Protective devices not provided or were inadequate in number.

(Protective devices include rubber gloves, goggles, pipe covering, insulation, clearances, guard rails, danger tags, danger signs, etc. Do not confuse with No. 6.)

5. Protective devices not used.

(The injured did not use protective devices which were provided.)

6. Lack of proper inspection and maintenance.

(Accident caused by defects in tools, materials, or devices; these defects could have been discovered on proper inspection. Poor housekeeping methods.)

7. Insufficient light.

Employee Failure.—

8. Rules or instructions not followed.

(This refers to unintentional disobedience of established rules or instructions. If injured wilfully disobeyed instructions classify under No. 13.)

9. Intemperance.

(Injury resulting from intoxication of the injured.)

10. Lack of concentration, carelessness.

(Accident caused by lack of concentration, carelessness or mechanical manner of doing work.)

11. Hurry.

(Accident caused by hurry of the injured.)

12. Poor judgment.

(The injured did not exercise good common sense.)

13. Wilfulness.

(Deliberate disobedience of instructions or rules.)

14. Unfit physical condition of the injured.

(Acident caused by the injured being ill, or not in condition to do the work required of him. Do not confuse with No. 1.)

Causes Beyond Control of Injured.—

15. Particles carried by Air Currents.

(Particles entering eyes, when goggles would not ordinarily be worn.)

16. Contributory negligence of others.

(Accident caused because of an act of omission or commission, by someone other than the injured.)

17. Abnormal weather conditions.

(Accident caused by windstorms, lightning, tornado, etc.)

18. Failure of equipment.

(Accident caused by flaws, undiscoverable by usual inspection methods.)

19. Non-industrial.

(Accident occurred when employee was not on duty.)

Electrical Hazards in Industry

Leaflet No. 31, published by the Province of Quebec Safety League, enumerates the principal dangers from the use of electricity as being shock, burns, flashed eyes, and fire. Accidents, it is stated, may be caused by short circuits, accidental grounds, overloads of poor contacts. It is advisable, from the point of view of safety as well as of production, that your electrical equipment be installed and maintained according to the accepted standards as incorporated to-day in all regulations on this subject. Accidents would be

considerably decreased in number as well as in severity if all industrialists refused to accept, from their inspectors and foremen, any compromise whatever on this score. The Province of Quebec Safety League urges all the members of its industrial section to appoint one or more special committees to make a thorough inspection of the electrical equipment of their plant and to prepare, before the end of the year, a detailed report on the places where the said equipment is not absolutely up to standard and where consequently accidents are likely to happen.

This survey should cover carefully the following points:—

Electrical equipment, in every part of the plant, even the least accessible, should be perfectly enclosed, or guarded in such a way that the hazard is reduced to a minimum. High voltage circuits and apparatus should always be obviously marked with warning posters, indicating the voltage. Throughout the plant, the fixed wires should be enclosed in standard conducts. At places of unusual danger, there should be warning signs properly located. All exposed metal parts which are non-current-carrying should be well grounded. Wherever needed, the management should see that insulated floor mats be provided and used. It is advisable to replace as soon as possible the old type switches by the new model enclosed switches. Attention should particularly be given to portable lamps, which have caused probably more accidents in the past than any other electrical apparatus. The conductor cord for these lamps should be of standard make and quality. Moreover, in these lamps and other portable equipment, it is important to see that the right type of switch and socket be used at all times. Finally, in all plants there should be an organized effort to instruct periodically the workers concerning these common hazards. Posters, pamphlets, slides, motion pictures could be used to bring this information to the attention of all the employees.

The first aid treatment required in cases of accident is described in other publications of the League. Leaflet 31, however, points out that in cases of shock, burns or flashed eyes caused by electricity, first aid should be carefuly and immediately given by trained first aiders. In all these cases, especially in the case of shock, prompt and intelligent first aid may mean the saving of life.

Effects of Iron Ore Dust on Miners

An article on "Dust inhalation and iron ore mining" is contributed to the *Journal of Industrial Hygiene*, September, 1930, by Dr. E. L. Collis and Sir Kenneth W. Goadby, K.B.E. who reach the following general conclusions of the effects on the miners of exposure to dust generated while mining iron ore or hematite:—

"Experience from the mining industry suggests that: (*a*) Prolonged inhalation of dust from iron ore does not originate miners' phthisis, nor any tendency to pneumonia, but (*b*) it does set up bronchitis; (*c*) it causes shortness of breath and impairs chest expansion, without however setting up troublesome symptoms; (*d*) it is associated with X-Ray shadows indicative of fine diffuse fibrosis; and (*e*) it originates definite generalized pulmonary changes of a fibrotic type which impair the usefulness of the lungs."

PROBLEM OF HOME WORK IN THE UNITED STATES AND CANADA

INDUSTRIAL Home Work in the United States is the subject of a recent report recently published by the Women's Bureau of the United States Department of Labour. The report analyses the extent, character, and causes of home work, and points out the inadequacy of the earnings of the workers and the difficulties of regulation. It reproduces the recommendations recently made by the committee on industrial home work of the Association of Governmental Labour Officials of the United States and Canada.

The report observes that the custom of sending articles from factories into homes to be made or finished has been accompanied in the past by the evils of long hours of labour, low rates of pay, irregular employment, child labour, and working conditions that constitute a menace, actual or potential, to the health of the workers and of the public. Information as to the extent and character of home work is fragmentary, only a few States having any current knowledge of the situation within their jurisdictions. Yet such information as exists is sufficient to indicate that home work is extensive in many of the industrial States, and "that unless under constant supervision and regulation by the authorities it generally is accompanied by the old evils."

Home work is described as a type of labour that presents extreme difficulties to efforts at regulations, at the same time that it particularly calls for regulation because it is so subject to abuse by the undercutting of the standards set up by the State for factory work. With reference to the numbers em-

ployed on home work, figures are given for the few States where the problem is officially recognized through attempts at regulation and control. In many other States it is known that the home work problem exists, but information is fragmentary and in a large majority no legal regulation is in force.

The needle trades are the great sources of home work. Of the 21,573 home workers found in licensed houses in New York State in the year ended June 30, 1927, the clothing trades employed over 13,000 and embroidery and artificial flowers gave employment to 4,000 more. In New York City during the same period 33·5 per cent of the registered home workers were employed on men's clothing, 22·4 per cent on embroidery, and 15·9 per cent on trimmings and flowers. In Pennsylvania in 1927, 27 per cent of the employers and 23 per cent of the home workers were in the men's clothing industry, while other clothing, knit goods, and tobacco were the industries next in importance. Stringing tags, carding buttons, hooks and eyes, or safety pins, making garters, and work on cheap jewelry, lampshades, powder puffs, paper boxes and bags, carpet rags, and toys, are a few of the simple occupations characteristically found as home industries.

Dealing with causes, the report indicates that from the standpoint of employers the chief motive for giving out home work is the desire to avoid overhead expense. "The industries that use the home work system vary in their details, but are alike in using, to quickly expand the labour force when a rush of work comes, the labour available in the home. Thus the industries need not provide factory space and pay rent and other overhead for this part of their production. Under the pressure of competition, the employers avoid these costs so far as they can. The burden of expansion and contraction, instead of being carried as one cost of the industry, is passed on to the home workers in the form of irregularity of employment and earnings. Inevitably questions arise as to the soundness and the social ethics of such a system of production. From the standpoint of the industry itself, it is questionable whether the instability and unregulated competition of this system is advantageous; whether such an organization of production is efficient. From the standpoint of the public there is a clear case for regulation, if not the more drastic measure of prohibition, to set limits to the conditions that this highly competitive type of production imposes upon a group of workers who are, by the nature of the case, in poor position to protect themselves."

It is pointed out that home workers are largely women "aided all too frequently by children." The survey further indicated that home workers are chiefly unskilled or semi-skilled and are recruited largely in tenement districts and often from among recent immigrants. Working as individuals, they are reported as being in a poor position to bargain for their labour, and "their competition for work, in industries of very irregular employment, makes low rates of pay possible, while long hours of work and the illegal employment children are evils all to often found as accompaniments."

Much industrial home work consists of very simple processes or can easily be subdivided into simple processes. It is stated that, as a result, it is feasible for members of the family of all ages and degrees of skill to take part, and the illegal employment of child labour is found frequently and is very difficult to prevent.

The causes that induce women to undertake industrial work in their homes are found of the sort that take other women into factories—chiefly the pressure of family needs that can not be met from other family income. Inadequate earnings of the husband, illness, unemployment, are listed as among the chief reasons. Often family convenience keeps the woman at home rather than in factory work, in order to care for young children or old or disabled members of the household. Custom and habit have a very important part, "for in many cases industrial home work is the accepted thing while factory work appears strange, unsuitable and repugnant."

The results of various surveys on home earnings constitute an important feature of the report. The New York State Department of Labour found that in the men's clothing industry in New York City for the year ended June 30, 1925, home workers averaged weekly earnings of over $10, or about one-third the earnings of factory workers. In a more recent report from New York the median earnings of individual home workers in a usual week were $6.19 for all industries and ranged from $12.50 in the men's neckwear industry down to $3.88 in the making of powder puffs.

The Pennsylvania Department of Labour and Industry in 1924 found that among 599 families with children working illegally, 86 per cent of the families earned less than $10 per week, while one of every three families earned under $4 a week. Another study, in 1928, reported on hours and earnings of 820 home-working families in Pennsylvania. This showed that the median hourly rate of pay for all workers was 16 cents; it was only 6 cents in one industry and never above 21

cents in any industry. The median weekly earnings for adult individual workers were $4.40. Where the weekly earnings were the result of the combined efforts of more than one member of the family, the median was $5.25.

The United States Children's Bureau, in its study in New Jersey in 1925, secured information on annual earnings from home work from 334 families. Less than 5 per cent of the families earned $500 or more, while 46 per cent earned less than $100 and 23 per cent less than $50.

The report also outlines the hazards to public health involved in home work. In this respect it was stated that while studies in recent years found the majority of homes clean and in fairly good condition, yet "some are always found that show evidences of filth, or other neglect, or in which work was continued while communicable diseases were present."

Recommendations

In conclusion, the report presents the recommendations of a special committee of the Association of Governmental Labour Officials of the United States and Canada, which was appointed in 1926 to look into the question of industrial home work, the extent to which such work is conducted in the United States, and the methods being taken to deal with the problem. This committee submitted a set of minimum standards of regulations recommended pending further research. Among the minimum standards recommended are the following:—

(1) Absolute prohibition of the manufacture of certain kinds of articles in the homes is necessary for sanitary reasons, either for the protection of the consumer, as in the case of foodstuffs, certain articles of clothing, etc., or for the protection of the worker in cases where poisonous or otherwise injurious materials are used in manufacture of the goods concerned.

(2) All labour laws of a State, including legislation regulating child labour and the hours of labour of women, workmen's compensation or employer's liability laws, minimum-wage legislation, and the legal standards for safety, sanitation, and working conditions, should apply to industrial work of all kinds done in the home as well as to that done in the factory.

(3) Responsibility for full compliance with such laws and with any special regulations applicable to home work should be placed upon the manufacturer for whom the work is done, irrespective of whether the work is given out by him directly or through another person. . . . . No employer or contractor should be permitted to give out home work who is not licensed to do so by the State department of labour and no employer should be licensed to give out home work who does not enforce compliance with all the requirements of the labour law applicable to home work in the homes in which work is done for him.

(4) Adequate authority for the enforcement of all laws applying to factory work done in homes should be given by law to the State labour department and an adequate inspection staff should be provided for this work. . . . .

(5) Local boards of health shall notify the State labour department daily of all cases of communicable disease occurring in the locality over which they have jurisdiction, giving the name and address of the person suffering form the disease, and the State labour department shall report immediately to employers the names and addresses of all home workers registered as employed by them in whose homes such disease exists.

Regulation of Home Work in Canada

In Canada, several of the provinces have enactments in respect to home work, particularly when such work necessitates guarding public health against unsanitary conditions of labour, or against infections and contagious diseases. In Ontario, there are specific regulations covering this class of work under the Factory Shop, and Office Building Act. The section of this Act dealing with health and safety compels the registration in the clothing manufacturing industry of every person to whom articles of clothing are given out for manufacture or alteration. In cities of 50,000 population or over, permits are required for this class of work done in homes, and a manufacturer is prohibited from letting out such work unless he has ascertained that the person to whom the work is given out has received a permit from the factory inspector. Persons exposing for sale garments or article of clothing made in any dwelling house or tenement are required to have a permit from the inspector stating that the place of manufacture is in a good sanitary condition. Upon such permit is stated the maximum number of persons allowed to be employed on the premises, and the permit may be revoked at any time if protection of the health of the community or of those so employed upon the premises renders such revocation desirable. When the inspector finds that garments have been made under unclean or unsanitary conditions he is authorized to seize and label them "unsanitary," and then to notify the Board of Health, whose duty it is to disinfect the articles of clothing.

Similarly, if an inspector finds evidence of infectious or contagious disease present in premises where clothing is in process of manufacture "he shall forthwith report the facts to the local board of health, which shall forthwith make such order as the public health may require, or may condemn and destroy all such garments or articles, or any garment or article made, altered or improved or in process of manufacture under unclean or unsanitary conditions."

Legislation on somewhat similar lines is in effect in Alberta, Manitoba and British Columbia.

GOVERNMENTAL RELATIONS WITH UNOFFICIAL SAFETY AGENCIES

MR. R. B. MORLEY, general manager, Industrial Accident Prevention Associations of Ontario, delivered the following address before the Governmental Officials' Session of the National Safety Council at the National Safety Congress, which was held at Pittsburgh on September 30, 1930:—

There are three phases, Mr. Morley said, of the question of Governmental relations with safety agencies:—

1. Co-operation through representation on committees of safety organizations, such as was mentioned to me by Sir Gerald Bellhouse, Chief Inspector of Factories for Great Britain, in connection with the National Safety First Association in England. Sir Gerald said his department provided for plant inspection under the law, but that he felt fully justified in according the National Safety First Association complete co-operation in matters of various kinds, such as committee work, co-operation in placing bulletins, etc. This involves no money expenditure on the part of the government.

2. The second form of co-operation is such as we have in Canada through the Canadian National Safety League, a Dominion wide organization and the Ontario Safety League. In these cases, governmental co-operation is extended through representation on various committees and direct grants of money. For example, in the past several years the Ontario Safety League has had a grant of $15,000 a year from the Provincial Government. This money is expended chiefly on educational work through hundreds of public and separate schools in the province.

3. The third type of direct relation between government and safety agencies is covered by Section 114 of the Workmen's Compensation Act of Ontario, which reads:—

(1) The employers in any of the classes for the time being included in Schedule 1 may form themselves into an association for accident prevention and may make rules for that purpose.

(2) If the Board is of opinion that an association so formed sufficiently represents the employers in the industries included in the class, the Board may approve such rules, and when approved by the Board and by the Lieutenant-Governor in Council they shall be binding on all the employers in industries included in the class.

(3) Where an association under the authority of its rules appoints an inspector or an expert for the purpose of accident prevention, the Board may pay the whole or any part of the salary or remuneration of such inspector or expert out of the accident fund or out of that part of it which is at the credit of any one or more of the classes as the Board may deem just.

(4) The Board may in any case where it deems proper make a grant toward the expenses of any such association.

(5) Any moneys paid by the Board under this Section shall be charged against the class represented by such association and levied as part of the assessment against such class.

(6) The word "class" in this section shall include sub-class or such part of a class or such number of classes or parts of classes in Schedule 1 as may be approved by the Board.

I have been told that when the Workmen's Compensation Act of Ontario was being framed back in 1914, industry in the Province felt that some more intensive work was necessary and asked for the inclusion of a section similar to that quoted so that accident prevention work might be carried on and the cost distributed fairly over the beneficiaries, that is, the industries in the classes organized for accident prevention work.

Speaking at one of the Safety Conventions of the Industrial Accident Prevention Associations, the Hon. Dr. H. J. Cody of Toronto said, "The work of this organization is a happy combination of voluntary effort and state endorsation. You are operating under the sanction of the Workmen's Compensation Act, but the greater part of the work is done by individuals and groups of individuals. That is the soundest method of getting permanent and satisfactory results. Self-reliance and individual initiative have always characterized the business men of our race. What we do look forward to as an ideal condition is a socialized individualism in which you have the fullest opportunity for the application of individual initiative and resource and, yet, behind it, a necessary amount of governmental regulation and, if necessary, control."

The Compensation Act in Ontario is a monopolistic state fund and there are twenty-four separate classes of industry each paying its own cost of compensation. Under Section 114, eighteen complete classes have set up accident prevention associations, while separate groups in two other classes have done the same. These organizations are financed entirely by the Workmen's Compensation Board under this section and carry on their work with that authority plus certain other sections including one which authorizes the entry of all plants at reasonable hours for the purpose of ascertaining whether or not the plant is in a safe condition.

Fifteen of the eighteen classes mentioned, together with the two groups from two other classes, have federated for purposes of economy and better general direction of effort in the Industrial Accident Prevention Associations. The organization is directed by an Executive Committee representative of the province geographically and of the classes of industry included in the membership. There has been complete co-operation with Mr. J. T. Burke, Chief Inspector of Factories, and his department in carrying out industrial work in the Province.

For the year ending December 31, 1929, the total expenditures by the Industrial Accident Prevention Associations amounted to $97,941.81 and the expenditures paid by the Workmen's Compensation Board for the three classes organized for accident prevention purposes, but, not included in our membership, totalled $40,233.33. As this sum is spread over a payroll of about $500,000,000, you will see that the expenditure is very reasonable.

Methods of Work.—The work of the Industrial Accident Prevention Associations is divided roughly into two parts. The first of these is covered by the field force. We have a staff of trained inspectors, who operate in about 8,000 plants included in our membership, under the general direction of the chief inspector. Their work includes the inspection of plants for physical hazards, the holding of plant meetings with or without motion pictures, the discussion of accidents and accident prevention with the management etc., etc. These men are trained in their duties in a very careful manner and understand fully that they are at the service of industry.

The other phase of the work of the organization is the distribution of various forms of safety literature, including bulletins, pay envelope inserts, the annual safety calendar, special cards, leaflets, etc. Once each year, a Safety Convention is held and at the 1930 Convention we had a total attendance of 1,310 delegates from 80 towns and cities, which is the largest yet registered. The Convention usually lasts for two days and includes worthwhile safety exhibits. Through the co-operation of the Workmen's Compensation Board, the organization is put in possession of a great deal of very valuable information. For example, we receive from the Board each week, brief reports on the accidents involving claims by injured workers. These give us details of most of the accidents involving a loss of seven days time or more and assist materially in the various phases of the organization's work. In addition, we receive advice from the Board of all awards of $100 and more as made and once a year a report on the expenditures by the Board for accidents in the various plants, together with a statement of assessments made. This permits an effective check-up on plants with both accident frequency and money costs.

Another phase of the organization's work is covered by Section 83 (4-5) which reads as follows:—

Where a greater number of accidents has happened in any industry than in the opinion of the Board ought to have happened if proper precautions had been taken for the prevention of accidents in it, or where in the opinion of the Board the ways, works, machinery or appliances in any industry are defective, inadequate or insufficient the Board may so long as such condition in its opinion continues to exist add to the amount of any contribution to the accident fund for which an employer is liable in respect of such industry such a percentage thereof as the Board may deem just and may assess and levy the same upon such employer, or the Board may exclude such industry from the Class in which it is included, and if it is so excluded the employer shall be individually liable to pay the compensation to which any of his workmen or their dependents may thereafter become entitled and such industry shall be included in Schedule 2.

Any additional percentage levied and collected under the next preceding subsection shall be added to the accident fund or applied in reduction of the assessment upon the other employers in the class or sub-class to which the employer from whom it is collected belongs as the Board may determine.

Under this section, a certain number of firms have been penalized by the Workmen's Compensation Board for failure to keep their plants in proper condition. This clause is used as a last resort, but is, on the other hand, fully effective. Earlier this month, there was a case of a plant paying a rate of 15 cents per hundred dollars of payroll which had failed to carry out reasonable recommendations and when the hearing was held, the Compensation Board raised the rate to $5 per hundred dollars of payroll. As I say, this is a clause that is not used unless drastic steps are necessary.

It is to be assumed that we are, all of us, more or less biased in favour of our own effort and the manner in which are own particular organization is functioning. Yet, I have talked to men in the United States, in England, in France and in Switzerland and have found all of them keenly interested in Section 114 of the Compensation Act of Ontario and almost unanimous in their belief that the most effective form of accident prevention in industry is through some system such as we have in Ontario providing as Dr. Cody said, "a happy combination of voluntary effort and state endorsation." We are getting definite results and I assure you that industry takes a keen interest in the work of the Industrial Accident Prevention Associations.

Changes in German Health Insurance System

The German health insurance system was amended recently as the more immediate result of economic depression, although changes had been contemplated for some time. The chief reason for the changes, which became effective on July 28, was to relieve the taxpayers, employers and insured persons of part of the burdens involved in health insurance so as to meet the inevitable increase in unemployment insurance contributions resulting from the large number of unemployed.

Social insurance legislation in Germany was reviewed in the Labour Gazette, June, 1928, pages 594-596, and reference was also made in the issue of March, 1930, page 295, to a number of important measures of social policy likely to be enacted in 1930. As above mentioned, changes in the health insurance system had been under consideration for the past five years, but the onset of economic depression hastened such action. The subject was due for discussion at the last session of the Reichstag, but dissolution took place before the report on the Committee of Social Policy was reached. The president of the Republic thereupon, under Article 48 of the Weimar Constitution, issued on July 26, 1930 a Decree to meet urgent financial, economic and social exigencies. One section of this Decree deals with unemployment insurance, health insurance and war pensions.

The provisions relating to health insurance make important changes in the system hitherto in force. In order to provide for an increase of contributions to unemployment insurance (necessitated by the increase in the cost of unemployment relief) the contributions to health insurance have been restricted and benefits somewhat reduced in consequence. The presidential decree consolidated and extended the system of benefits in certain directions, but, it was pointed out that the main object, which was the reduction of health insurance costs, could not be achieved without considerable limitation of the obligation of the funds. One direct limitation takes the form of a fee of half a mark payable by the sick person for each certificate and each prescription made up for his use. An even more considerable indirect limitation will result from the important changes made in the relations between the funds and the doctors. The individual responsibility of the doctor towards the fund is reaffirmed and strengthened. The funds are given powers to prevent an excessive increase of the medical expenses to be met by them.

The class of persons subject to compulsory insurance is left unchanged. All workers, whatever their wages, are subject to compulsory insurance; salaried employees and professional workers are only subject to it if their pay does not exceed 3,600 marks a year. Two changes, however, are made in the class of persons subject to voluntary insurance. Persons who were formerly compulsorily or voluntarily insured lose the right to voluntary insurance as soon as their income exceeds 8,400 marks a year. The surviving husband or wife of a person compulsorily or voluntarily insured who has died may continue the insurance of the deceased person under the same conditions and in the same wage-group, provided that the survivor is not already insured.

The conditions for the grant of cash benefit are made stricter. In order to reduce the medical and pharmaceutical expenses met by the funds, the sick person will have to pay a special fee at the time of the first medical examination and for each prescription.

Sickness benefit is still fixed at one-half of the basic wage. The funds have hitherto been entitled to raise the benefit by their rules up to three-quarters of the basic wage, and more than half the funds had made use of this power. In future sickness benefit may not exceed half the basic wage except for the purpose of providing for dependents or in cases of illness of long duration.

LEAGUE OF NATIONS INTERNATIONAL LABOUR ORGANIZATION

Ratification of International Labour Conventions

At August 31, 1930, the total number of ratifications of International Labour Conventions registered with the Secretary-General of the League of Nations and officially notified to the International Labour Office was 404 (including 9 conditional ratifications).

At the same date the number of Conventions of which ratification had been authorized by the competent authority in the countries concerned, but had not yet been registered with the Secretary-General of the League of Nations was 29.

During the month of August, 1930, Belgium ratified the Convention concerning the unemployment, adopted by the International Labour Conference at its First Session (Washington, 1919).

International Conference on Silicosis

Further particulars have been received of the International Conference on Silicosis, which was held in Johannesburg, South Africa, during August under the auspices of the International Labour Office, with the assistance of the Transvaal Chamber of Mines and the Government of the Union of South Africa. Reference to this conference was made in the last issue of the Labour Gazette, page 1040.

Its purpose was to enable a body of specialists drawn from various countries to exchange experience and opinions with regard to the industrial scourge of silicosis, and at the same time to acquaint themselves at first hand with the remarkable work done by the Miners' Phthisis Bureau of the Rand in fighting this disease. Experts from the following eight countries took part in the conference: Australia. Canada, Germany, Great Britain, Italy, the Netherlands, the Union of South Africa and the United States. The United States, though not a member of the International Labour Organization, was represented by two delegates.

The conference discussed the three questions submitted for its consideration: (1) the medical aspect of silicosis: pathology and clinical phenomena of the disease; (2) preventive measures; and (3) compensation. The proceedings were facilitated by the distribution in advance of papers prepared by individual delegates on various aspects of the problem with which they were specially conversant.

As a result of the discussions, which closed on August 27, the conference was able to reach agreement on a number of recommendations. These recommendations relate to the general principles to be followed for prevention, compensation and after-care, the desirability of uniformity in terminology and radiographic technique as a means of facilitating international comparisons, the urgent necessity for further scientific research into such matters as methods of dust determination; the prevention and control of dust; the action, pathology and diagnosis of silicosis and other dust diseases; and the collection of fuller information as to the incidence and development of silicosis and the investigation of rehabilitation schemes.

This conference is stated to have afforded a valuable experience on methods of collaboration between the International Labour Office and the scientific world, and has shown that collaboration on an international basis may contribute substantially to checking the ravages of a deadly and costly occupational disease.

Publications of the Office

A further series of brochures of "Occupation and Health," the Encyclopaedia of Hygiene, Pathology and Social Welfare which is in course of publication by the International Labour Office, has just appeared. It comprises monographs on: Medical and Allied Professions (Occupational Pathology of); Men of Letters, Speakers, etc.; Occupational Diseases: Digestive System and General Metabolism; Statistics, and Nervous System; Pearls (Artificial); and Personal Hygiene.

The Minimum Wage Board of Nova Scotia have issued the first order since their appointment early this year (Labour Gazette, March, page 255). The new order governs the wages and other conditions of female employees in laundries and dry cleaning and dyeing establishments in Cape Breton. Minimum rates of wages for a week's work of 44 to 50 hours are fixed at eleven dollars for experienced workers. For inexperienced adults over 18 years of age the minimum scale starts at nine dollars per week, and for young girls under 18 at seven dollars, increasing after each period of six months until the worker becomes experienced. Note was made in the Labour Gazette, July, 1930, (page 736) of the regulations recently made by the Board. The new order will be published in full in a future issue.

INTERNATIONAL ASSOCIATION OF PUBLIC EMPLOYMENT SERVICES OF THE UNITED STATES AND CANADA

THE International Association of Public Employment Services of the United States and Canada held its eighteenth annual convention at the Royal York Hotel, Toronto, from September 9 to 12, 1930. Fifteen States of the United States, four provinces of Canada, and the Canadian Federal Department of Labour were represented. The Ontario delegation included all local superintendents of the offices of the Employment Service of Canada in that province. At the opening of the first session an invocation was offered by Rev. Salem Bland, D.D. of Toronto, and addresses of welcome were delivered by Mr. J. H. H. Ballantyne, Ontario Deputy Minister of Labour, in the unavoidable absence of the Minister of Labour for Ontario, by Controller William D. Robbins, representing the Mayor of Toronto, and by the president of the Association, Mr. H. C. Hudson, Ontario general superintendent, Employment Service of Canada, Toronto.

The agenda consisted of subjects covering a wide field of employment service activity, and valuable supplements to the various papers read were made in discussions that followed. The following is a list of the subjects dealt with during the sessions, and of persons contributing the papers thereon:—

"The field of employment," by Mr. Barney Cohen, Director, State Department of Labour, Springfield, Ill.

"Are the State Employment Services making progress?" by Mr. Roswell F. Phelps, assistant federal director, U.S. Employment Service, Boston, Mass.

Mr. H. H. Ward, the federal Deputy Minister of Labour of Canada, was listed to explain "How the Federal-Provincial Public employment system functions in Canada." Mr. Ward, however, was unable to attend owing to Parliament being in special session, and the subject was dealt with by Mr. R. A. Rigg, director of the Employment Service of Canada, Ottawa, and past president of the Association.

"Development of a federal Public Employment system in the United States," by Mr. Fred C. Croxton, special assistant, Department of Industrial Relations, Columbus, Ohio.

"Expansion of Public Employment activities during emergencies or depressions." Miss Frances Perkins, industrial commissioner of the State of New York, prepared a paper on this subject but was unable to attend. The paper was read by Mr. Fritz Kauffman, chief of the Bureau of Employment, New York State Department of Labour.

"The Cincinnati plan for unemployment relief," by Mr. Fred K. Hoehler, Director, Department of Public Welfare, Cincinnati, Ohio.

"The attitude of the local superintendent," by Mr. Walter A. Selkirk, local office superintendent, Employment Service of Canada, Hamilton, Ont.

"New publicity methods for the Public Employment Service," by Mr. S. S. Riddle, Director of the Bureau of Employment, Harrisburg, Pa.

"How the Public Employment Office can best serve the employer," by Mr. J. G. Clark, store superintendent, Robert Simpson Company, Limited, Toronto.

"Some aspects of vocational education in relation to employment," by Dr. G. E. Reaman, superintendent of the Training School for Boys, Bowmanville, Ont.

"Placement of handicapped workers," by Mr. John Aubel Kratz, chief of the Vocational Rehabilitation Service, Federal Board for Vocational Education, Washington, D.C.

"Employment problems of the South and Southwest," by Mr. W. A. Rooksbery, Federal Director, U.S. Employment Service, Little Rock, Arkansas.

"Unemployment insurance," by Mr. H. A. Desjardins, local office superintendent, Employment Service of Canada, North Bay, Ont.

One of the most important subjects before the conference, and the one which perhaps stimulated the keenest interest, was that which was involved in the two items on the agenda associated with the names of Mr. H. H. Ward, Canadian Deputy Minister of Labour, and Mr. Fred C. Croxton of the Department of Industrial Relations, Columbus, Ohio, namely "How the Federal-Provincial Public Employment System functions in Canada" and "The development of a Federal Public Employment system in the United States." Considerable attention was given by both Houses of the Congress of the United States during the last session to a bill introduced by Senator Wagner of New York, the aim of which was to secure for the United States a co-ordinated national system of public employment offices very similar to the system which, during the past eleven years, has existed in Canada under the terms of the Employment Offices Co-ordination Act, 1918. (LABOUR GAZETTE, March, 1930, page 258; June, 1930, page 670). Senator Wagner's bill succeeded in passing the Senate, but did not meet with the same favourable consideration in the House of Representatives.

Mr. Croxton's paper outlined the plan for the establishment of a co-ordinated governmental employment office system in the United States, and in relation to this matter the following resolution was unanimously adopted by the delegates:—

"Whereas stabilizing employment is one of the most important problems confronting the world to-day, and whereas it is necessary to provide proper methods for handling this problem: Therefore be it resolved that the delegates to the Eighteenth Convention of the International Association of Public Employment Services at Toronto, Ontario, approve the plan covered in the paper of Fred C. Croxton, Special Assistant, Dept. of Industrial Relations of Ohio, and be it further resolved that the Secretary be instructed to send copies of this paper to the Speaker of the House and President of the Senate of the United States and Chairman of the proper committees in both Houses of the United States Congress, so that the State Service will be supplemented in working out this problem, copies of resolutions and Mr. Croxton's paper likewise to be sent to Senator Wagner of New York."

Among other resolutions adopted by the Conference were the following:—

(1) Whereas, various solutions are being proposed for unemployment, such as shorter hours, unemployment insurance, and certain forms of stabilization of employment, and whereas, the members of this organization are not agreed as to the merits of such alleged solutions: Be it resolved, that a committee of five be appointed by the President to investigate the general problems of unemployment and to report annually thereon to this Association.

(2) Whereas, unemployment problems are to-day attracting the attention of some of the best minds of every civilized country in the world, and whereas, better public employment exchanges are one means of decreasing unemployment and hence the programs of an Association such as ours should attract all those interested in unemployment problems: Be it resolved, that the membership of the Association be made to realize the need for a wider exchange of ideas and information which come from their attendance at our Annual Meetings; and be it further resolved, that a program committee be appointed to advise with the executive committee with respect to seeing that the speakers who accept the responsibilities of addressing the Convention realize their obligation to attend, and that the committee endeavour to build up a program which will attract to our yearly meetings a group commensurate in size with the importance of the work of the Association.

(3) Resolved, that this Association request the Post Office Departments of the United States and Canada to place a die with the following inscription in stamp cancellation machines:—"PROVIDE WORK FOR THE JOBLESS."

(4) Whereas, there has never been an authentic history of this Association: Be it resolved, that a special committee be appointed at this convention to compile a complete history of this Association and report to the Nineteenth Annual Convention.

(5) Resolved that, a copy of all resolutions adopted by this Convention be sent to the Governors of all States in the United States, to all Ministers of Labour of the provinces of Canada, and to the Departments of Labour of the United States and Canada.

The following officers were elected for the ensuing year:—

President—Mr. H. C. Hudson, general superintendent, Employment Service of Canada, Toronto, Ontario.

Secretary-treasurer—Mr. B. C. Seiple, superintendent, State-City Employment Service, 108 City Hall, Cleveland, Ohio.

Past president—Mr. R. A. Rigg, Director, Employment Service of Canada, Ottawa, Ontario.

First vice-president—Mr. John S. B. Davie, commissioner, Bureau of Labour, Concord, N.H.

Second vice-president—Mr. Francis I. Jones, director general, U.S. Employment Service, Washington, D.C.

Third vice-president—Mr. Emmanuel Kovaleski, examiner, U.S. Employment Service, Rochester, New York.

Executive committee:—Mrs. M. L. West, assistant Federal director, U.S. Employment Service, Richmond, Virginia; Mr. J. A. Bowman, provincial general superintendent, Employment Service of Canada. Winnipeg, Man.; Mr. Harry Lippart, superintendent, Milwaukee Employment Office, Milwaukee, Wisconsin; Mr. S. S. Riddle, director, Bureau of Employment, Harrisburg, Pa.; and Mr. George F. Miles, chief of Labour Statistics, Columbus, Ohio.

It was decided to hold the 1931 convention in Cincinnati, Ohio.

The executive committee of the Miners' Federation of Great Britain, at the request of the Mines Department, recently appointed a committee to investigate the possibility of applying part of the Miners' Welfare Fund to help finance a scheme of pensions for miners at 60 years of age. The diversion of the whole of the Welfare Fund to a pensions fund is not contemplated, but one idea is that at least 75 per cent of its income of about £1,000,000 a year might be better employed, in the circumstances of the day, in making provision for the older men who, in times of depression, find it most difficult to retain their employment. Some account of the Miners' Welfare Fund was given in the Labour Gazette, December, 1924, page 1035 and in previous issues.

EMPLOYMENT AND UNEMPLOYMENT IN CANADA IN AUGUST, 1930

THE following information as to the employment situation in Canada is based upon reports from four sources:—

(1) The Dominion Bureau of Statistics receives reports each month from most of the larger employers of labour throughout Canada in all industries except agriculture, fishing, hunting and highly specialized business, the returns being from firms employing fifteen workers or more. The number of firms so reporting on September 1, was 7,334, their employees numbering 1,023,633 persons.

(2) The Department of Labour receives reports from local trade unions throughout Canada, showing the number of their members who were unemployed in the period under review. The number of unions reporting for August, was 1,630, having an aggregate membership of 196,048 persons. It should be understood that the report on the number of unemployed workers refers only to organized labour, no figures being available as to the number of unorganized workers who were without employment.

(3) The Department of Labour receives reports from the 66 offices of the Employment Service of Canada showing the number of applications for work, the existing vacancies and the number of workpeople placed in positions.

(4) The Dominion Bureau of Statistics receives each month detailed statistics from 61 cities throughout Canada, showing the value of permits granted during the period of various classes of building construction.

(1) Employment Situation at the Beginning of September, 1930, as Reported by Employers

As is often the case in the early autumn, there was a slackening of industrial activity at the beginning of September, but the declines in employment this year were greater than those recorded in any other September on record except 1924, when a similiar proportion of the staffs was involved. The number on payroll, however, continued larger than in the late summer of any other year for which data are available, except 1929 and 1928. The Dominion Bureau of Statistics received data from 7,334 firms with a combined working force of 1,023,633 persons on September 1, as against 1,042,441 in the preceding month. The index number (based upon the average for the calendar year 1926 as 100) stood at 116·6, compared with 118·8 on August, 1930, and with 126·8, 119·1, 111·0, 106·2, 97·8, 94·2, 101·2, 94·8 and 89·8 on September 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively.

Mining, transportation, trade and services showed heightened activity, while there were losses in construction, manufacturing and logging.

Employment by Economic Areas

All except the Prairie Provinces reported contractions, that in the Maritimes being most pronounced.

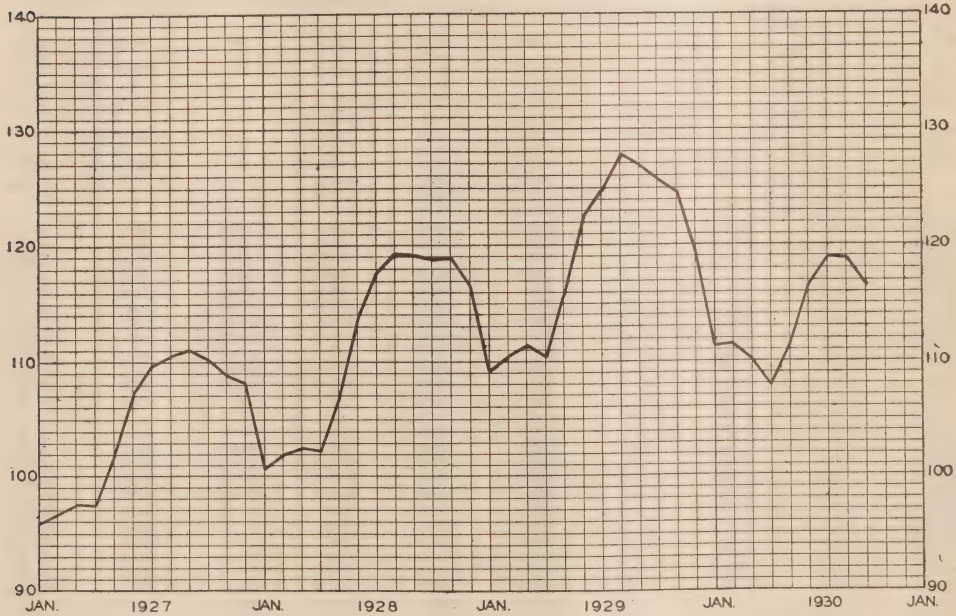
Maritime Provinces.—There was an important decline in employment in the Maritime Provinces, involving a much larger number of workers than that registered on September 1, of other years of the record. Most of the loss took place in construction, owing to curtailment of road work, but manufacturing and transportation also released employees, while mining and communications were busier. Statistics were received from 552 firms, whose staffs aggregated 82, 945 workers, compared with 95,244 in the preceding month. The index was lower than on the same date in 1929, though it was higher than on September 1, of the years, 1921-28.

Quebec.—Contractions were noted in manufacturing, logging, communications and construction, while transportation was brisker. Within the manufacturing group, the largest decreases were in iron and steel, rubber, pulp and paper, lumber and non-ferrous metals, but improvement was noted in the textile and vegetable food industries. The working force of the 1,696 co-operating employers stood at 288,874 persons, as against 291,384 on August 1. Decreases were also registered at the beginning of September, 1929, but the index then was several points higher.

Ontario.—In this province, 3,234 firms reported that they had reduced their staffs by 7,259 employees to 407,462. Manufacturing as a whole employed fewer operatives, largely on account of losses in iron and steel, lumber, and pulp and paper factories, and construction, logging, transportation, trade and communications also released employees. On the other hand, canneries recorded considerable seasonal activity, and electrical apparatus and non-ferrous metals also showed improvement. The situation was not so favourable as in the early autumn of 1929 and 1928, but with these

exceptions it was better than on September 1, of any other year since the record was commenced.

Prairie Provinces.—For the fifth consecutive month, there was an increase in employment in the Prairie Provinces, where the index was higher than on the same date in any other year except 1929. Returns were tabulated from 1,097 employers of 154,289 workers, as compared with 150,007 at the beginning of August. Mining, transportation, construction and trade afforded heightened employment, but manufacturing was slacker, notably in the iron and steel and lumber divisions.



Employment by Cities

Employment advanced in Windsor and the adjacent Border Cities, Winnipeg and Vancouver, while in Montreal, Toronto, Ottawa and Hamilton, curtailment was registered. There was no general change in Quebec.

Montreal.—Employment in Montreal showed a further falling-off on September 1, 1,646 workers having been released from the pay-lists of the 922 co-operating firms, who employed 140,856. Manufacturing (except of clothing, leather, and food products) reported general contractions, but transportation and construction showed improvement. The in-

EMPLOYMENT IN CANADA AS REPORTED BY EMPLOYERS

Note.—The curve is based on the number of employees at work on the first day of the month as indicated by the firms reporting, in comparison with the average number of employees they reported during the calendar year 1926 as 100.

British Columbia.—Employment as reported by employers in British Columbia showed its first decrease since the winter; this took place chiefly in construction, but logging was also slacker, while manufacturing, transportation and trade showed improvement. The working force of the 754 firms furnishing data declined from 91,085 persons on August 1, to 90,063 at the beginning of September. The contraction involved a rather larger number of workers than that indicated on September 1, 1929, when employment was in greater volume.

Table I gives index numbers by economic areas.

dex was higher than on the same date in other years on record, except 1929 and 1928.

Quebec.—Very little change was indicated, according to 126 employers of 14,201 persons. Gains in manufacturing were largely offset by losses in construction. Employment as reported by employers continued at a high level as compared with previous years of the record.

Toronto.—Manufacturing, construction and trade afforded less employment, while only slight changes were noted in other industries. Statements were received from 985 firms with 122,123 workers, or 933 less than on August 1

Considerable increases had been indicated on the same date a year ago, when employment was above its present level.

Ottawa.—There was a large decline, chiefly in manufacturing and construction. The 149 firms furnishing returns reported 13,554 employees, compared with 14,234 in the preceding month. On September 1, 1929, a reduction involving a smaller number of workers had been noted, and the index then was rather higher.

Hamilton.—Manufacturing (particularly of iron and steel and textile products) and construction reported contractions, while other industries showed little general change; 216 employers recorded 31,653 persons on their payroll, as against 33,805 on August 1. Employment was in much smaller volume than at the beginning of September a year ago, when curtailment had also been indicated.

Windsor and the Adjacent Border Cities.—A slight advance was registered, the 135 co-

Note.—The "Relative Weight" in Table I, shows the proportion of employees in the indicated area to the total number of all employees reported in Canada on the date under review.

operating firms reporting 14,974 workers, as against 14,882 in the preceding month. Automobile plants afforded increased employment, but construction was not so active. A somewhat larger gain had been indicated on the same date of last year, when the index number was considerably higher.

Winnipeg.—Employment showed a further slight increase, but the situation was not so favourable as on September 1, 1929. Manufacturing recorded a reduction, but improvement was noted in construction. An aggregate working force of 33,241 persons was reported by the 346 employers whose returns were received, and who had 33,152 employees in the preceding month.

Vancouver.—There was a further gain in activity, according to the statements received from 285 firms employing 30,587 workers, as against 30,120 on August 1. Manufacturing and retail trade reported increases in personnel, while shipping was slacker and only comparatively small changes took place in other groups. Employment was in very slightly less

Note.—The "Relative Weight" in Table II shows the proportion of employees in the indicated city to the total number of all employees reported in Canada on the date under review.

volume than on the same date a year ago, when small additions to staffs had been noted.

Index numbers by cities are given in Table II.

Manufacturing

Iron and steel, lumber, pulp and paper, rubber, mineral and edible animal product factories showed curtailment, in some cases of a seasonal character, while the vegetable food, textile, electrical apparatus, fur and non-ferrous metal divisions recorded improvement. Statements were received from 4,413 manufacturers employing 522,151 operatives, as compared with 531,560 at the beginning of August. Employment on September 1, 1929, had also declined, but the index then was many points higher than on the date under review.

Animal Products—Edible.—Declines were shown in dairies, while other divisions reported

Note.—The "Relative Weight" in Table III shows the proportion of employees in the indicated industry to the total number of all employees reported in Canada on the date under review.

only slight changes. There were losses in all provinces except British Columbia. The payrolls of the 204 co-operating factories aggregated 20,618 employees, as compared with 21,061 in the preceding month. Employment on September 1, 1929, had also decreased, but the index number then was practically the same as on the date under review.

Leather and Products.—A slight gain was shown in leather factories, chiefly in footwear plants, but this was not so large as that noted at the beginning of September of last year, when the level of employment was higher. Statements were received from 184 manufacturers having 15,494 persons in their employ, as against 15,404 on August 1. Quebec firms reported most of the increase.

Table IV—INDEX NUMBERS OF EMPLOYMENT BY INDUSTRIES (AVERAGE 1926=100)

Industries	[1]Relative weight	Sept. 1 1930	Aug. 1 1930	Sept. 1 1929	Sept. 1 1928	Sept. 1 1927	Sept. 1 1926	Sept. 1 1925

[1]The "Relative weight" column shows the proportion that the number of employees in the indicated industry is of the total number of employees reported in all industries by the firms making returns on the date under review.

Lumber and Products.—Further seasonal reductions were made in sawmills, and container, furniture and vehicle factories also released help. The decrease, (in which all provinces shared although the largest losses were in Ontario), was greater than that noted on September 1, 1929, when the index was very much higher. A combined working force of 50,884 persons was registered by the 741 establishments from which returns were received, and which employed 54,139 in their last report.

Plant Products—Edible.—Biscuit, confectionery, chocolate, cocoa, fruit and vegetable factories reported heightened activity; the improvement was on a much larger scale than on the same date last year, when the index was lower. Data were compiled from 387 firms in the vegetable food group, whose payrolls rose from 34,246 on August 1, to 37,919 at the beginning of September. All provinces reported advances, that in Ontario being most pronounced.

Pulp and Paper Products.—Employment in this group showed a reduction, mainly in pulp and paper mills and printing shops; the tendency was also downward on September 1 last year, when the index was a few points higher than on the date under review. The forces of the 549 co-operating establishments included 65,516 persons, as compared with 67,720 in the preceding month. There were declines in all provinces.

Rubber Products.—Contractions were indicated in rubber factories, 39 of which employed 14,094 workers, or 525 less than in their last report. Practically all the loss took place in Quebec and Ontario. A similar decrease had been registered on September 1, 1929, when the index was much higher than on the date under review.

Textile Products.—Increases were noted in textile factories, 676 of which had 77,220 employees, as against 76,683 on August 1. Most of the advance took place in Quebec. Garment and personal furnishing, headwear and silk factories registered the bulk of the gain, while cotton mills were slacker. Employment on the same date last year was in greater volume.

Tobacco, Distilled and Malt Liquors.—A small loss was noted in this industry on September 1, when 55 persons were released from the payrolls of the 148 co-operating factories, which employed 16,017 operatives. Large declines were reported in tobacco factories, but breweries were decidedly busier. The level of employment was higher than at the beginning of September, 1929, when a pronounced decrease had been indicated.

Chemical Products.—Employment in this division showed a slight falling-off, according to statistics from 122 employers of 7,600 persons, compared with 7,644 on August 1. The situation was not so favourable as on the same date a year ago.

Clay, Glass and Stone Products.—Brick works released some employees, while the other divisions of this group showed improvement. Statements were received from 165 plants, having 13,955 workers, as against 13,-972 in the preceding month. A larger reduction had been noted on the same date last year, but the index then was a few points higher.

Electric Current.—Very little change was shown in electric current plants, 91 of which employed 16,177 persons, compared with 16,-181 in their last report. Losses in Quebec were offset by gains in the remaining provinces. The index was slightly lower than on September 1, 1929.

Electrical Apparatus.—Employment in this group increased at the beginning of September, when 290 workers were added to the forces of the 58 co-operating establishments, which had 16,625 employees. This gain occurred mainly in Ontario; it was not so large as that noted on the corresponding date in 1929, when the index was rather lower.

Iron and Steel Products.—Agricultural implements, railway cars, shipbuilding, rolling mills, sheet metal works, machinery and some other branches of the iron and steel group recorded contractions in employment; there was a reduction of 7,233 in the forces of the 696 co-operating iron and steel manufacturers, who employed 127,966 persons. Activity decreased in all provinces, but chiefly in Ontario. The trend on September 1, 1929, was also unfavourable, but the index number then was much higher than on the date under review.

Non-Ferrous Metal Products.—The precious metal division reported lowered employment, while smelting and refining showed considerable improvement; 110 manufacturers employed 19,962 operatives, as against 19,856 on August 1. Although curtailment had been indicated on the same date last year, employment then was in rather greater volume.

Mineral Products.—Employment in this group showed a further decrease, according to statements from 84 establishments with 13,514 persons on their payrolls, as aganist 13,984 at the beginning of August. Quebec and Ontario reported most of the contraction. The index was lower than on September 1, 1929, when a slight improvement had been indicated.

Logging

For the first time on record, employment in logging camps failed to show a seasonal increase at the beginning of September, but many of the 209 co-operating firms reported that they would shortly commence operations. Their payrolls aggregated 14,463 workers, compared with 16,291 in the preceding month. The number employed in the bush was smaller than on September 1, 1929.

Mining

Coal.—Data were received from 82 operators, who had 26,930 men on their payrolls, as compared with 26,204 at the beginning of August. Both Eastern and Western coal-fields shared in the expansion, which involved a considerably larger number of workers than that registered on the same date a year ago. The index number then, however, was rather higher.

Metallic Ores.—Employment in metallic ore mines showed a slight falling-off, according to returns from 66 firms whose forces declined from 16,535 persons on August 1, to 16,437 at the beginning of September. A gain had been shown on September 1, 1929, when the index number was some six points higher.

Communications

Slight reductions were noted in the communication division, in which the companies reporting employed 31,424 workers, as against 31,472 in their last report. Employment continued in smaller volume than on the same date in 1929, when improvement had been indicated.

Transportation

Street and Electric Railways and Cartage.—Considerable expansion was shown in local transportation on the date under review, when 555 employees were added to the forces of the 146 firms furnishing data, who had 26,010 in their employ. A large proportion of this advance was in the Prairie Provinces. The index number was several points lower than at the beginning of September, 1929, when a greater gain was indicated.

Steam Railways.—There was an increase in the number employed in steam railway operation on September 1, according to the 104 companies and branches from which returns were received, and which reported 82,563 employees, compared with 81,692 on August 1. Employment was at a lower level than on the same date last year, when contractions had been noted. Practically all the gain took place in the Prairie Provinces, while elsewhere the changes were slight.

Shipping and Stevedoring.—There was a minor increase in employment in water transportation, in which activity was less than on the same date in 1929. Statements were received from 83 employers of 18,679 workers, as against 18,644 in the preceding month.

Construction and Maintenance

Building.—Further but small expansion was shown in building construction, in which employment was not so active as in the late summer of 1929. Data were received from 745 contractors, whose payrolls rose from 60,940 on August 1, 1930, to 61,021 persons on the date under review. The trend was favourable in the Maritime Provinces, but there were losses in Quebec and Ontario.

Highway.—There was a very pronounced shrinkage in this group, 11,260 men being released from the forces of the 286 co-operating employers, who had 54,759 workers; there were losses in all except the Prairie Provinces, but the most important declines were in New Brunswick. Activity was greater than on September 1 of last year.

Railway.—A large increase in employment was indicated by the 59 firms furnishing data in this division, who employed 48,144 persons, as against 47,232 in the preceding month. Practically all the improvement was in Quebec and the Prairie Provinces. Pronounced losses had been noted on the corresponding date in 1929, but the index number then was some fifteen points higher.

Services

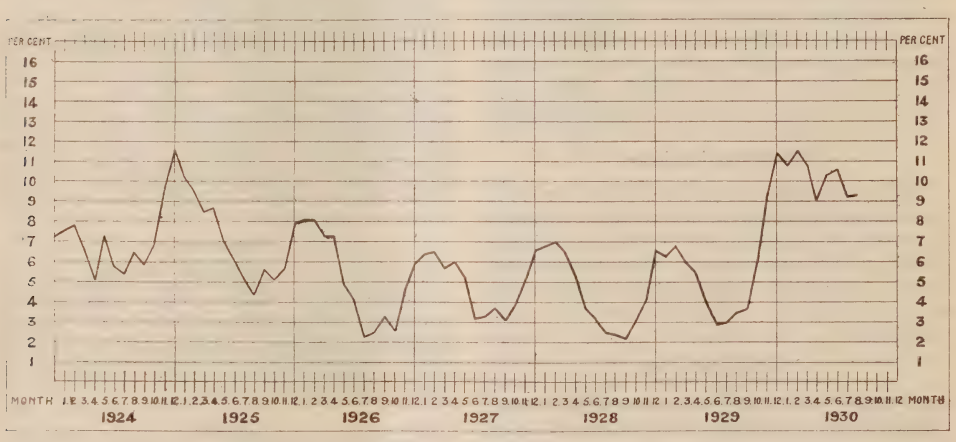
There was a moderate increase in the service group, in which activity this year has not been quite so marked as in 1929. The 234 establishments furnishing returns for September 1, 1930, reported 24,387 assistants, as against 24,241 on August 1.

Trade

There was an increase in staffs in both retail and wholesale trade; employment continued as practically the same level as in the late summer of last year, while it was more active than at the beginning of September in previous years of the record. Returns were received from 767 establishments employing 87,958 persons, compared with 87,363 at the beginning of August.

Tables

Index numbers of employment by economic areas, leading cities and industries, are given in the accompanying tables, in which the columns headed "Relative Weight" show the proportion that the number of employees reported in the indicated area or industry is of the total number of employees reported in Canada by the firms making returns on the date under review.



(2) Unemployment in Trade Unions at the Close of August, 1930

The term unemployment as used in the following report has reference to involuntary idleness due to economic causes. Persons who are engaged in work other than their own trades or who are idle because of illness are not considered as unemployed, while unions involved in industrial disputes are excluded from these tabulations. As the number of unions making returns varies from month to month, with consequent variation in the membership upon which the percentage of unemployment is based, it should be understood that such figures have reference only to the organizations reporting.

Practically no variation in the unemployment level was manifest by local trade unions at the close of August from the previous month, the 1,630 labour organizations from which reports were tabulated, with 196,048 members, indicating 9·3 per cent of idleness, contrasted with 9·2 per cent in July. Considerable curtailment of activity, however, was evidenced from August a year ago when the percentage of members unemployed stood at 3·5. Nova Scotia, New Brunswick, Manitoba, Saskatchewan and Alberta unions all registered slight gains in employment from July, which were just more than offset by the contractions reported among Quebec, Ontario and British Columbia unions. The changes throughout, however, were quite small. Less favourable conditions prevailed in every province than in August last year, the employment recessions in Quebec being the most extensive.

Each month a separate tabulation is made of unemployment in the largest city in each province, except Prince Edward Island. During August, Regina and Vancouver unions reported the greatest unemployment percentages of the cities dealt with, the percentage in the former city being indicative of a considerably improved situation from July and that in the latter city indicating a slight decline. The most substantial gain from July conditions, however, was reported by Halifax unions, while in Saint John and Winnipeg increases in employment of less than 1 per cent were recorded. In Edmonton, Toronto and Montreal some reductions were shown in the employment volume available. In making a comparison with the returns for August of last year Halifax and Saint John unions alone reported improvement during the month reviewed which was but nominal, while of the contractions in the remaining cities the most pronounced was in Regina.

PERCENTAGE OF UNEMPLOYMENT AS REPORTED BY TRADES UNIONS

The chart which accompanies this article, illustrates the unemployment trend by months from January, 1924, to date. It will be noticed that the curve during August remained on almost the same level as in July, showing a practically stationary unemployment volume. Considerable divergence was indicated by the curve from August of last year, the projection during the month reviewed showing a distinct rise from August a year ago.

From unions of workers in the manufacturing industries 452 reports were received at the close of August, embracing a membership of 58,309 persons. Of these, 4,648 were reported idle on the last day of the month, a percentage of 8·0 compared with 7·3 per cent in July and with 3·9 per cent in August last year. Printing tradesmen and general labour-

ers registered contractions which involved the largest number of workers when compared with July, and among textile and garment workers employment was somewhat retarded. The percentage increase in unemployment shown by woodworkers and cigar makers was noteworthy, but as these workers together form but a small share of the total membership reported in the manufacturing industries they do not materially affect the unemployment percentage in the group as a whole. On the other hand, hat and cap workers registered a decidedly improved situation and fur and glass workers increased activity on a more moderate scale. Iron and steel workers and leather workers in addition registered fractional employment expansion. Hat and cap workers alone reported a better employment trend from August last year, while of the reductions those recorded by iron and steel, garment, leather and textile workers, general labourers and printing tradesmen were noteworthy.

Employment conditions in the coal mines showed during August some slight improvement from the previous month, the 41 reporting unions with 15,752 members indicating an unemployment percentage of 6·6, contrasted with 8·8 per cent of inactivity in July. This advance in employment was shared by both Nova Scotia and Alberta unions, while in British Columbia adequate work was afforded as in July. Compared with the returns for August last year, when 5·1 per cent of the miners reported were idle, employment in the Alberta mines showed a reduction of over 3 per cent during the month reviewed, and Nova Scotia mines showed declines of a lesser degree. In British Columbia all members were reported busy in the two months compared.

The situation in the building trades remained almost stationary during August, the percentage of idleness standing at 28·8 at the close of the month compared with an unemployment percentage of 28·3 in July. The August percentage was based on the returns received from a total of 206 unions, with a membership aggregate of 27,945 persons. Changes, however, occurred in the various groups, carpenters and joiners, bricklayers, masons and plasterers, plumbers and steamfitters, and hod carriers and building labourers reporting some employment cessation, and the remaining tradesmen reporting moderate advances in employment. Heavy contractions in activity were registered in the building trades from August last year, when 7·2 per cent of the members reported were idle, all tradesmen suffering employment curtailment, of which the greater part was indicated by carpenters and joiners, and bricklayers, masons and plasterers.

The transportation industries, with 705 unions, covering a membership of 68,255 persons at the end of August, recorded an unemployment percentage of 5·0 contrasted with 4·9 cent of inactivity in July. Steam railway employees, whose returns constitute about 80 per cent of the entire group membership reporting, were afforded a slightly greater volume of work than in July, and among teamsters and chauffeurs the situation also showed some improvement. Navigation workers, on the other hand, reported a substantial falling-off in activity, and street and electric railway employees reported nominal declines only. In the transportation industries, a comparison with the returns for August last year, when 1·9 per cent of the members reported

TABLE I—PERCENTAGES OF UNEMPLOYMENT IN TRADE UNIONS BY PROVINCES

were idle, shows that steam and street and electric railway employees, navigation workers and teamsters and chauffeurs all participated in the unfavourable employment trend indicated during the month under reveiew.

Owing to the casual nature of their employment returns from longshore workers are tabulated separately each month. During August 13 associations of these workers reported, with a membership total of 6,839 persons, 21·8 per cent of whom were unemployed on the last day of the month, compared with 14·0 per cent in July and with 13·5 per cent in August last year.

The 6 unions of retail clerks from which returns were received during August, with 1,252 members, reported all their members busy as in July, contrasted with ·1 per cent of unemployment in August a year ago.

Reports were tabulated during August from 55 unions of civic employees with a total of 7,075 members, ·5 per cent of whom were idle at the close of the month, compared with 6 per cent of inactivity in July and with a fully employed situation in August a year ago.

Employment in the miscellaneous group of trades declined slightly during August from the previous month as shown by the reports received from 114 unions with 5,924, members. Of these 733 were without employment on the last day of the month, a percentage of 12·4 contrasted with 10·8 per cent in July. Stationary engineers and firemen, unclassified workers, hotel and restaurant employees, barbers and theatre and stage employees all shared to some extent in this slight depression. In making a comparison with the returns for August of last year in the miscellaneous group of trade when 4·6 per cent of the members reported were idle, all tradesmen as in the previous comparison were less actively engaged during the month surveyed, stationary engineers and firemen reporting the most substantial recessions.

Fishermen, with 4 unions embracing a membership of 1,263 persons, indicated 1·2 per cent of unemployment, contrasted with no idleness in July and an unemployment percentage of 1·6 in August last year.

Lumber workers and loggers reported some improvement during August from July conditions, though the unemployment percentage remained on a rather high level. For the month reviewed 4 unions of these workers made returns covering a membership of 938 persons 18·8 per cent of whom were unemployed at the end of the month, compared with 22·2 per cent in July. Activity was, however, considerably reduced from August of last year when 6·9 per cent of the members reported were idle.

Table I shows by provinces the percentage of members who were on an average unemployed each year from 1919 to 1929, inclusive, and also the percentage of unemployment by provinces for August of each year from 1919 to 1927, inclusive, and for each month from January, 1928, to date. Table II summarizes the returns in the various groups of industries for the same months as in table I.

(3) Employment Office Reports for August, 1930

During the month of August, 1930, the reports from the offices of the Employment Service of Canada showed an increase of over 37 per cent in the average daily placements over those of the preceding period, while a loss of nearly 30 per cent was registered when a comparison was made with the average daily placements effected during the corresponding month a year ago. In comparison with work transacted during July, farming, construction and maintenance, services, transportation, and manufacturing showed gains, the largest increase being in farming, due to harvesting operations in the Prairie Provinces. Other groups recorded declines. All industrial divisions, however, showed decreased placements from those of August, 1929, the heaviest decline occurring in the agricultural group.

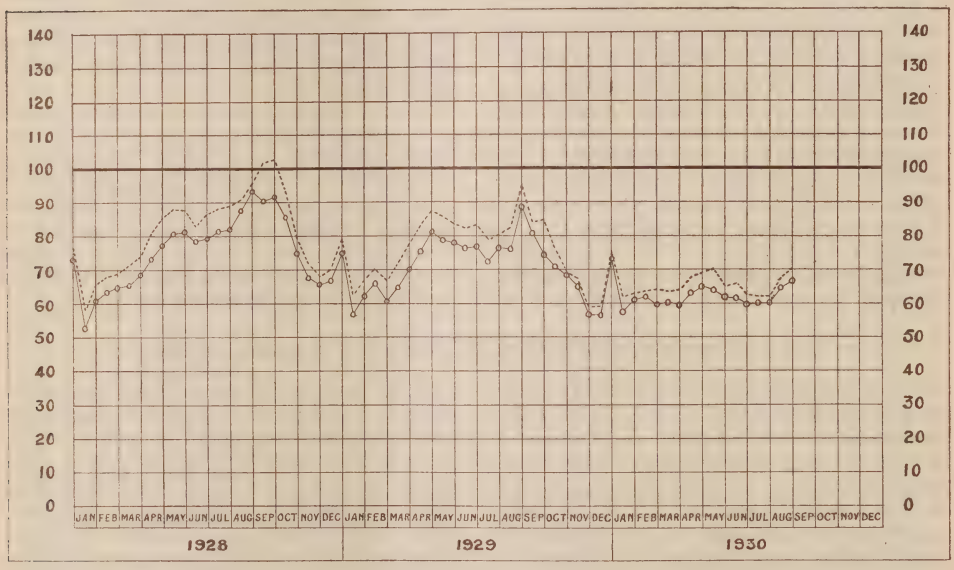
The accompanying chart shows the trend of employment since January, 1928, as represented by the ratio of vacancies notified and of placements effected for each 100 applications for work registered at the offices of the Service throughout Canada, compilations being made semi-monthly. It will be noted that the curve both of vacancies and of placements showed an upward trend throughout the month, though at the close of the period under review, the ratio of vacancies to applications was almost 25 points below that shown at the close of August, 1929, while the ratio of placements to applications also showed a drop of 22 points. The ratio of vacancies to each 100 applications was 67·6 during the first half and 70·4 during the second half of August, 1930, in contrast with the ratios of 82·6 and 95·3 during the corresponding periods of 1929. The ratios of placements to each 100 applications during the periods under review were 64·7 and 66·6 as compared with 76·1 and 88·9 during the corresponding month of 1929.

The average number of vacancies reported daily by employers to the offices of the Service throughout Canada during August, 1930,

was 1,407, as compared with 1,006 during the preceding month, and with 2,047 in August a year ago.

The average number of applications for employment received daily by the offices during the month under review was 2,037 in comparison with 1,616 in July, 1930, and with 2,271 during August last year.

The average number of placements made daily by the offices of the Service during August, 1930, was 1,339, of which 958 were in regular employment and 381 in work of one week's duration or less, as compared with a total daily average of 974 during the preceding month. Placements in August a year ago averaged 1,901 daily, consisting of 1,458 placements in regular and 443 in casual employment.



During the month of August, 1930, the offices of the Service referred 36,027 persons to vacancies and effected a total of 34,792 placements. Of these, the placements in regular employment were 24,909, of which 20,627 were of men and 4,282 of women, while placements in casual work totalled 9,883. The number of vacancies reported by employers was 27,341 for men and 9,231 for women, a total of 36,572, while applications for work numbered 52,945, of which 40,319 were from men and 12,626 from women.

The following table gives the placements effected by the offices of the Employment Service of Canada, each year, from January, 1920, to date:—

Year	Placements		
	Regular	Casual	Totals
1920	366,547	79,265	445,812
1921	280,518	75,238	355,756
1922	297,827	95,695	393,522
1923	347,165	115,387	462,552

1928	334,604	135,724	470,328
1929	260,747	137,620	398,367
1930 (8 months)	124,497	89,285	213,782

POSITIONS OFFERED AND PLACEMENTS EFFECTED FOR EACH ONE HUNDRED APPLICATIONS FOR EMPLOYMENT

Applications ———— Vacancies - - - - - - - - - Placements o—o—o—o—o—o

Nova Scotia

During the month of August, 1930, positions offered and placements effected by employment offices in Nova Scotia were nearly 12 per cent higher than in the preceding month and nearly 22 per cent above the corresponding month of last year. Construction and maintenance was the only industrial group to show any substantial decline in placements in comparison with August, 1929, though there were fewer placements in farming and communication. These losses, however, were more than offset by gains in all other groups, of which those in transportation, services and

logging were the most noteworthy. Placements by industrial groups included: manufacturing, 61; logging, 110; transportation, 157; construction and maintenance, 107; trade, 59; and services, 328, of which 260 were of household workers. During the month regular employment was found for 206 men and 70 women.

New Brunswick

There was a decrease of nearly 14 per cent in the number of positions offered through employment offices in New Brunswick during August, when compared with the preceding month, and nearly 12 per cent in comparison with the corresponding month of last year. Placements also were nearly 14 per cent less than in July and nearly 16 per cent below August, 1929. Placements in services, logging and transportation were higher than during August of last year, but these gains were more than offset by declines in all other groups, of which that in construction and maintenance was the most pronounced. Industrial divisions in which most of the placements were effected during the month were: manufacturing, 38; logging, 52; construction and maintenance, 30; and services, 551; of which 437 were of household workers. Placements in regular employment numbered 108 of men and 68 of women.

Quebec

The demand for workers, as indicated by orders listed at employment offices in the Province of Quebec during August, decreased more than 11 per cent from the preceding month and nearly 39 per cent when compared with corresponding month last year. There was a decline also in placements of nearly 14 per cent in comparison with July and of nearly 45 per cent when compared with August, 1929. Fewer placements were made in all industrial divisions than in August of last year, but the large declines under logging and construction and maintenance almost entirely accounted for the total reduction for the province. Placements by industrial groups included: manufacturing, 107; logging, 478; farming, 65; construction and maintenance, 187; and services, 598, of which 420 were of household workers. During the month 921 men and 464 women were placed in regular employment.

Ontario

During August, 1930, orders received at employment offices in Ontario called for nearly 7 per cent fewer workers than in the preceding month and over 32 per cent less than in the corresponding month of last year. There were also decreases in placements of nearly 11 per cent in comparison with July and of over 28 per cent when compared with August, 1929. All industrial divisions participated in the declines in placements from August last year. The reduction under manufacturing and logging being particularly heavy, with lesser declines in services, construction and maintenance and trade. Placements effected by industrial divisions included: manufacturing, 912; logging, 238; farming, 1011; transportation, 271; construction and maintenance, 2401; trade, 290; and services, 4030, of which 2124 were of household workers. During the month regular employment was found for 4,185 men and 1,478 women.

Manitoba

Orders listed at employment offices in Manitoba during August called for nearly 92 per cent more workers than those of the preceding month, but there was a decline of nearly 14 per cent from the total of the corresponding month last year. There was also an increase of 99 per cent in placements when compared with July but a decrease of nearly 14 per cent when compared with August, 1929. Transportation was the only group in which more placements were made than in August last year and this gain was small. Of the declines, those in services and farming were the most pronounced. Industrial divisions in which most of the placements were effected were: manufacturing, 105; logging, 52; farming, 4,223; transportation, 66; construction and maintenance, 369; trade, 139; and services 1,775, of which 1,436 were of household workers. There were, during the month, 4,604 men and 668 women placed in regular employment.

Saskatchewan

Opportunities for employment as indicated by orders received at employment offices in Saskatchewan during August were 182 per cent higher than in the preceding month, but nearly 37 per cent less favourable than in the corresponding month last year. Placements increased 169 per cent over July, but declined over 18 per cent when compared with August, 1929. The reduction in placements from August of last year was almost entirely due to declines in farm placements, although there were fewer positions filled in all industrial divisions, except construction and maintenance. The gain in this group was, however, due to work undertaken in relief of unemployment. Placements by industries included: manufacturing, 177; farming, 4,545; trans-

portation, 75; construction and maintenance, 1,488; trade, 90; and services, 1,127, of which 759 were of household workers. During the month regular employment was secured for 5,635 men and 604 women.

Alberta

There was an increase of 90 per cent both in the number of positions offered and the number of placements effected through employment offices in Alberta during August compared with the preceding month, but a decrease of nearly 45 per cent in comparison with the corresponding month of last year. As in Saskatchewan, the reduction in farm placements was almost entirely responsible for the heavy decline from August, 1929. There were, however, fewer placements in all other groups, excepting construction and maintenance, communication and logging. The gains in the two latter being nominal only. Increased placements under construction and maintenance were due to highway construction undertaken in relief of unemployment. Industrial groups in which employment was found for the majority of workers included: manufacturing, 130; farming, 2,378; mining, 52; construction and maintenance, 1,261; trade, 78; and services, 825, of which 625 were of household workers. Placements in regular employment numbered 3,585 of men and 495 of women.

British Columbia

Employment opportunities, as indicated by orders received at employment offices in British Columbia during August, were nearly 20 per cent more favourable than those shown during the preceding month but over 48 per cent less favourable than during the corresponding month of last year. Placements showed an increase of more than 19 per cent over July, but were nearly 60 per cent lower than in August, 1929. During August of last year employment was found for a considerable number of harvest workers in the prairie provinces, but during the month under review no such movement took place. This was the chief cause for the decline in placements from August, 1929, although all other groups showed reductions, those in manufacturing and services being the most noteworthy. Placements by industrial divisions included: manufacturing, 474; logging, 113; farming, 244; transportation, 200; construction and maintenance, 911; trade, 100; and services, 1,346, of which 490 were of household workers. During the month 1,383 men and 435 women were placed in regular employment.

Movement of Labour

During the month of August, 1930, the Offices of the Employment Service of Canada made 24,909 placements in regular employment, 17,655 of which were of persons for whom the employment found was outside the immediate locality of the offices at which they were registered. Of the latter, 1,895 were granted the Employment Service reduced transportation rate, 1,463 travelling to points within the same province as the despatching office and 432 to other provinces. The reduced transportation rate which is 2·7 cents per mile with a minimum fare of $4, is granted by the railway companies to bona fide applicants at the Employment Service who may desire to travel to distant employment for which no workers are available locally.

Certificates were granted in Quebec during August to 54 persons, 13 of whom went to provincial employment and 41 to points outside. The transfers within the province were of sawmill labourers travelling from Montreal to centres within the same zone. All persons going outside the province were bushmen bound from Hull to points in the Pembroke zone.

Workers securing certificates for reduced transportation at Ontario offices during August were 80 in number, 70 of whom went to centres within the province and 10 to points outside. Travelling to provincial employment from Toronto were 12 carpenters and 11 power construction labourers going to Port Arthur, 7 power construction labourers to Ottawa and 3 stone masons and one hotel chef to Kingston. The North Bay office despatched 10 railway construction workers to Timmins and one farm hand each to the Toronto and Cobalt zones while from Ottawa 4 lumber mill workers were conveyed to Pembroke and one electrician and one carpenter to Timmins. Transferred from Port Arthur, one steamship cook proceeded to Sault Ste. Marie and 4 bushmen and 2 construction foremen to centres within the Port Arthur zone which zone was also the destination of one hoistman and one blacksmith shipped from Cobalt. To points within its own zone Fort William transferred 6 bricklayers and one domestic. The remainder of the provincial movement originated in Pembroke which office despatched 2 carpenters to Sudbury. Of the persons going to other provinces 9 were railroad construction workers for the Quebec zone all of whom received their certificates for reduced transportation at Cobalt. In addition, one farm hand went from Toronto to employment in the Yorkton zone.

Manitoba Offices granted 976 certificates for reduced transportation during August, 718 provincial and 258 interprovincial. The latter were issued at Winnipeg from which centre 213 farm hands and 6 farm household workers proceeded to the farming localities of Saskatchewan and one farm hand to Alberta. In addition, one waitress was conveyed to Estevan, 4 highway construction labourers and one hotel employee to Regina, 2 cooks to Weyburn and 26 sawmill labourers, 3 bushmen and one housekeeper to Port Arthur. Within the province Winnipeg transferred 2 farm hands, 14 farm domestics and 7 hotel employees to Brandon, one farm hand and one cook to Dauphin, and 623 farm hands, 2 farm generals, 40 highway construction workers, 11 bushmen, 12 carpenters, 2 mine labourers and one teacher to employment within the Winnipeg zone. To a point within its own zone Dauphin shipped 2 bushmen.

All certificates issued by Saskatchewan Offices during August were to provincial points and numbered 210. Of these, 158 were granted to farm hands and 5 to farm domestics travelling to employment at various rural points throughout the province, a large number of whom secured their certificates at the Regina Office. In addition the movement from Regina included 11 railway construction teamsters going to Moose Jaw, 2 highway construction workers to Prince Albert, one housekeeper to Swift Current and 3 teachers and 2 highway construction workers to points within the Regina zone. The Saskatoon Office was instrumental in the transfer of 12 highway construction teamsters to North Battleford, one bushman to Prince Albert and of 13 highway construction workers to employment within the Saskatoon zone. To a point within its own zone Prince Albert despatched one bushman to which zone also was destined one carpenter journeying from Moose Jaw.

In Alberta 427 persons took advantage of the Employment Service reduced transportation rate during August, 311 of whom went to employment within the province and 116 to points outside. Provincially the Edmonton Office transferred 138 farm hands, one farm domestic, 22 bush workers, 21 mine workers, 5 hotel employees, one blacksmith, 17 railway construction workers, 30 highway construction workers, 10 sawmill workers, one labourer, one cook and one maid to various points within its own zone. From the same centre also 10 farm hands went to Lethbridge, 7 farm hands to Drumheller, 6 farm hands to Calgary and 2 farm hands to Medicine Hat. The movement from Calgary was entirely of farm labour and included 35 farm hands and 3 farm housekeepers going to agricultural centres throughout the province. All persons travelling outside the province were for Saskatchewan harvest operations, 115 of whom were conveyed from Edmonton and one from Calgary.

By Offices in British Columbia 148 transfers at the reduced rate were effected during August, 141 of which were provincial, the balance representing an interprovincial movement. To employment within the province Vancouver despatched 64 cannery workers, 2 hotel workers and one engineer to points within the Kamloops zone, 19 cannery workers, one waitress and one domestic to Kelowna, 5 railway construction labourers and one gardener to Penticton, one highway construction labourer to Revelstoke, one blacksmith to Vernon and 14 loggers, 3 flunkeys, 2 cooks, 2 carpenters, 2 hotel employees, one cement finisher, one farm hand and one compressor operator within the Vancouver zone. From Prince George one sawmill engineer travelled to Prince Rupert and 11 highway construction labourers, one railway construction worker, 2 sawmill workers and one cook to employment within the Prince George zone. The Nelson Office transferred one mine cook within its own zone and one machine miner to Revelstoke, while from Prince Rupert one river driver journeyed to employment within the district covered by that city office. The 7 persons going outside the province were farm hands, the Prince George Office despatching one to Alberta and Vancouver, 3 to Alberta points and 3 to centres in Saskatchewan.

Of the 1,895 persons who benefited by the Employment Service reduced transportation rate during August, 733 travelled by the Canadian National Railways, 1,130 by the Canadian Pacific Railway, 22 on the Temiskaming and Northern Ontario Railway and 10 by the Pacific Great Eastern Railway.

(4) Building Permits Issued in Canada in August, 1930

There was a slight seasonal decline in the value of the building permits issued during August, 1930, as compared with July, while in comparison with August of last year there was also a considerable decrease; during the month under review the 61 co-operating centres authorized building estimated to cost $13,817,745, as compared with $15,730,964 in July, 1930, and $21,582,221 in August, 1929. There was, therefore, a decrease of 12·2 per cent in the first comparison, and of 36·0 per cent in the second. The aggregate value of the building authorized in the first eight months of this year continued higher than the average for the same period of the ten years, 1920-1929, although it was exceeded by the totals for the years 1929, 1928 and 1927.

Some 50 cities furnished detailed statistics showing that they had issued over 900 permits for dwellings estimated to cost approximately $4,000,000 and nearly 2,500 permits for other buildings valued at about $9,800,000. During July, authority was granted for the erection of some 900 dwellings and 2,300 other buildings, estimated at about $3,500,000 and $7,200,000, respectively.

Nova Scotia, Manitoba and Saskatchewan reported gains as compared with July, 1930, that of $707,210, or 920·1 per cent in Nova Scotia being especially noteworthy. Of the reductions elsewhere indicated, that of $1,669,748, or 31·0 per cent in Quebec was greatest.

Nova Scotia reported a higher aggregate of building permits issued than in August last year, that province showing an increase of $401,970 or 105·2 per cent as compared with August, 1929. Declines in this comparison were recorded in the remaining provinces, that of $3,239,996, or 35·9 per cent, in Ontario being most pronounced.

Of the larger cities, Winnipeg showed improvement as compared with July, 1930, but the total was smaller than in August, 1929, while Montreal, Toronto and Vancouver reported decreases in both comparisons. Of the other centres, Halifax, New Glasgow, Sydney, Sherbrooke, Westmount, Galt, Kingston, Kitchener, London, Port Arthur, Stratford, Sault Ste. Marie, Riverside, Walkerville and Moose Jaw registered gains in both comparisons.

Cumulative Record for First Eight Months, 1920-30.—The following table gives the value of the building authorized by 61 cities during August and in the first eight months of each year since 1920, as well as index numbers for the latter, based upon the total for 1920 as 100. The average index numbers of wholesale prices of building materials in the first eight months of the years since 1920 are also given, (average 1926=100).

Year	Value of permits issued in August	Value of permits issued in first eight months	Indexes of value of permits issued first eight months (1920=100)	Average indexes of wholesale prices of building materials in first eight months (1926 average=100)
	$	$		
1930	13,817,745	112,762,733	130·7	93·4
1929	21,582,221	168,894,072	195·7	99·6
1928	17,448,542	145,247,485	168·3	97·5

*Total—35 Cities	12,504,496	14,470,798	19,038,813

The aggregate for the first eight months of this year was 33·2 per cent lower than in 1929, the previous high level of the record, but was $4,089,646 or 3·8 per cent higher than the ten year average of $108,673,091, while the average index numbers of wholesale prices of building materials was much lower than in any other year since 1920. During August, the index of wholesale prices of building materials stood at 88·0, compared with 99·2 in August, 1929.

The accompanying table gives the value of the building permits issued by 61 cities during July and August, 1930, and August, 1929. The 35 cities for which records are available since 1910 are marked with asterisks.

EMPLOYMENT AND UNEMPLOYMENT IN GREAT BRITAIN AND THE UNITED STATES

DETAILED reports and tables showing the employment conditions in Great Britain and Northern Ireland are given in the *British Ministry of Labour Gazette* from month to month, a monthly summary of this information also being published. This summary, showing the employment situation during August is reproduced below. The following report on employment conditions in the United States is based on the statistics published by the United States Department of Labour, showing the recent trend of employment in selected manufacturing industries throughout the country. The employment situation in the United States is further indicated by unemployment percentages based on statistics compiled each month by the American Federation of Labour, the source of these statistics being returns obtained from the trade union locals in 24 representative cities. Summary figures for September, 1930, and previous months are reproduced below.

Great Britain

Employment continued to decline in August. There was a further increase in the numbers unemployed in iron and steel manufacture, engineering, motor and other vehicle manufacture, shipbuilding, most of the metal trades, the textile industries with the exception of jute manufacture, the clothing trades (except boot and shoe manufacture), building and public works contracting, and dock harbour, river and canal service. On the other hand, there was a substantial improvement in jute manufacture and some improvement in cocoa, chocolate and sugar confectionery. In the coal mining industry an increase in the numbers wholly unemployed was more than counterbalanced by a great reduction in the numbers temporarily stopped.

Among the work people, numbering approximately 12,100,000 insured against unemployment in Great Britain and Northern Ireland, and working in practically every industry except agriculture and private domestic service, the percentage unemployed at August 25, 1930 (including those temporarily stopped as well as those wholly unemployed), was 17·5, as compared with 17·1 at July 21, 1930, and with 9·9 at August 26, 1929. The percentage wholly unemployed at August 25, 1930, was 12·4, as compared with 11·6 at July 21, 1930; while the percentage temporarily stopped was 5·1, as compared with 5·5. For males alone the percentage at August 25, 1930, was 17·7 and for females 17·2; at July 21, 1930, the corresponding percentages were 17·4 and 16·5.

At August 25, 1930, the numbers of persons on the registers of Employment Exchanges in Great Britain were 1,333,850 wholly unemployed, 609,309 temporarily stopped, and 96,543 normally in casual employment, making a total of 2,039,702. This was 66,972 more than a month before and 883,899 more than a year before.

The total on August 25, 1930, included 1,437,406 men, 60,203 boys, 488,311 women, and 53,782 girls. The total of 1,333,850 wholly unemployed was made up approximately of 875,700 insured persons who had paid at least 30 contributions during the preceding two years, and therefore satisfied the full contributions condition for the receipt of unemployment benefit; 367,100 insured persons who had paid less than 30 contributions during the preceding two years, and 91,050 uninsured persons. The claimants for benefit, numbering 1,197,813, included 216,596 men, 5,365 boys, 45,131 women, and 2,433 girls who had been on the Register for less than one month.

In Great Britain and Northern Ireland the total number of persons on the registers of Employment Exchanges at August 25, 1930, was 2,105,881.

United States

Employment in the United States decreased 1·4 per cent in August, 1930, as compared with July, 1930, and pay-roll totals decreased 2·6 per cent, according to returns made to the Bureau of Labour Statistics. The industries included in the above statement are manu-

facturing, coal mining, metalliferous mining, public utilities, trade (wholesale and retail) and hotels.

A separate summary is made of the latest data available relating to all employees, exclusive of executive and officials, on Class I railroads. This tabulation is made from Interstate Commerce Commission reports for the months of May and June, 1930, and therefore cannot be included in the general statement for the month of August. The number of employees of Class I railroads as at June 15 totalled 1,547,557, representing a decrease of 2·3 per cent since May 15, 1930. The amount of pay-roll in the entire month of June was $210,060,545, representing a decrease over the previous month of 5·2 per cent.

Employment in manufacturing industries decreased 2·1 per cent in August as compared with July, and pay-roll totals decreased 2·6 per cent. These changes are based upon returns made by 13,055 establishments in 54 of the principal manufacturing industries of the United States. These establishments in August had 2,935,550 employees whose combined earnings in one week were $71,741,492.

The bureau's weighted index of employment for August, 1930, is 79·9, as compared with 81·6 for July, 1930, and 98·6 for August, 1929; the index for pay-roll totals for August, 1930, is 73·9, as compared with 75·9 for July, 1930, and 102·1 for August, 1929. The monthly average for 1926 equals 100.

The leather group of industries showed increased employment of 0·9 per cent in August, and there were smaller increases in the textile and chemical groups. Among the decreases in the remaining 9 groups the largest were 4·5 per cent in the tobacco group, 4·2 per cent in the iron and steel group, and 4 per cent in the vehicle group; the smallest decreases were 0·7 per cent each in the paper and stone-clay-glass groups.

Twenty of the 54 separate industries reported increased employment in August, these being largely such seasonal industries as millinery and lace goods, women's clothing, carpets, boots and shoes, furniture, steam fittings, stoves, paper boxes, rubber boots and shoes, and fertilizers. Woollen and worsted goods increased 1·3 per cent, shipbuilding increased 0·9 per cent, and pottery 4·8 per cent.

The outstanding decreases in employment from July to August were 13·6 per cent in machine tools, 13 per cent in agricultural implements, 7·2 per cent in cane sugar refining, 5·9 per cent in automobiles, 5·3 per cent in cigars and cigarettes, 5·2 per cent in foundry and machine-shop products, and about 4 per cent each in cotton goods, hardware, sawmills, and structural ironwork; the iron and steel industry reported a decrease of 3·6 per cent; and automobile tires a decrease of 3·4 per cent.

Each of the 9 geographic divisions reported fewer employees in August than in July, although the East South Central and Pacific divisions each reported increased pay-roll totals of more than 1 per cent for the same period. The outstanding decrease in both items was in the East North Central division—most affected by changes in the automobile industry.

Unemployment percentage.—Unemployment statistics which are being compiled each month by the American Federation of Labour, indicate the percentage of unemployed union members in twenty-four representative cities of the United States, as follows: October to December, 1927, 14 per cent; January, 1928, 18 per cent; February, 1928, 18 per cent; March, 1928, 18 per cent; April, 1928, 16 per cent; May, 1928, 13 per cent; June, 1928, 11 per cent; July, 1928, 12 per cent; August, 1928, 9 per cent; September, 1928, 10 per cent; October, 1928, 9 per cent; November, 1928, 10 per cent; December, 1928, 13 per cent; January, 1929, 15 per cent; February, 1929, 15 per cent; March, 1929, 14 per cent; April, 1929, 12 per cent; May, 1929, 11 per cent; June, 1929, 9 per cent; July, 1929, 9 per cent; August, 1929, 9 per cent; September, 1929, 10 per cent; October, 1929, 11 per cent; November, 1929, 12 per cent; December, 1929, 16 per cent; January, 1930, 20 per cent; February, 1930, 22 per cent; March, 1930, 21 per cent; April, 1930, 21 per cent; May, 1930, 20 per cent; June, 1930, 20 per cent; July, 1930, 22 per cent; August, 1930, 22 per cent; September, 1930, 21 per cent.

FAIR WAGES CONDITIONS IN DOMINION GOVERNMENT CONTRACTS

THE Department of Labour is furnished from month to month with information regarding the contracts executed by various departments of the Government of Canada which include among their provisions fair wages conditions for the protection of the labour to be employed.

Reference was made in the LABOUR GAZETTE, June, 1930, page 652, to the Fair Wages and Eight-Hour Day Act of Parliament which was adopted on May 30 last. The text of this measure appeared in the April issue at page 383. This Act provides as follows:—

3. (1) Every contract made hereafter with the Government of Canada for construction, remodelling, repair or demolition of any work shall be subject to the following conditions respecting wages and hours:—

(*a*) All persons in the employ of the contractor, sub-contractor, or of any other person doing or contracting to do the whole or any part of the work contemplated by the contract shall be paid such wages as are generally accepted as current from time to time for competent workmen in the district in which the work is being performed for the character or class of work in which they are respectively engaged; provided that wages shall in all cases be such as are fair and reasonable;

(*b*) The working hours of persons while so employed shall not exceed eight hours per day except in such special cases as the Governor in Council may otherwise provide, or except in cases of emergency, as may be approved by the Minister.

(2) The provisions of this section shall not apply to persons employed in the fabrication or manufacture of materials, supplies or equipment for use in the work contemplated where such fabrication or manufacture is carried on in any established plant or factory other than a plant or factory established for the purposes of the work contemplated.

Section 5 of the Fair Wages and Eight-Hour Day Act authorized the Governor in Council, on the recommendation of the Minister of Labour, to make necessary regulations under the Statute. Those regulations have not yet been made. The Act, however, was put into effect at once as respects contracts for construction, remodelling, repair or demolition, both as to its provisions as to current and fair and reasonable rates of wages and as to the application of the eight-hour day.

The Fair Wages Policy of the Government of Canada, which has been in effect since 1900 and is now expressed in an Order in Council adopted June 7, 1922, and amended April 9, 1924, requires that all contracts made on behalf of the Government of Canada for the construction or remodelling of public buildings of all kinds, railways, canals, roads, bridges, locks, drydocks, elevators, harbours, piers, wharves, lighthouses, and other works for the improvement and safety of the transportation and navigation, rifle ranges, fortification, and other works of defence, dams, hydraulic works, slides, piers, booms, and other works for facilitating the transmission of timber, and all other works and properties constructed or remodelled for the Government of Canada must contain either a fair wage schedule based on the current wages rates and working hours in the district, or a general fair wage clause requiring adherence to the current wage rates and working hours in the district for the different classes of labour employed, or, in the absence of such standard conditions, fair and reasonable rates and hours. The conditions above mentioned are referred to in the Order in Council as "A" conditions. Following is the text of the General Fair Wage Clause referred to:—

1. All mechanics, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen, in the district in which the work is being performed for the character or class of work in which they are respectively engaged, and if there be no current rates in such district, then fair and reasonable rates, and shall work such hours as are customary in the trade in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district, then fair and reasonable hours, unless for the protection of life and property, or for other cause shown to the satisfaction of the Minister of Labour, longer hours of service are required. The Minister of Labour may at any time and from time to time determine for the purposes of this contract, what are the current or fair and reasonable rates of wages and the current or fair and reasonable hours, and may from time to time, rescind, revoke, amend, or vary any such decision, provided that his determination and any amendment or variation shall not be operative prior to the period of three months immediately preceding the date thereof.

Where there are special circumstances which in the judgment of the Minister of Labour make it expedient that he should do so, he may in the manner and subject to the provisions hereinabove set forth, decide what are the current or fair and reasonable rates of wages for overtime, and what is the proper classification

of any work for the purposes of wages and hours. Immediately upon receipt of notice of any decision of the Minister of Labour hereunder the contractor shall adjust the wages and hours and classification of work so as to give effect to such decision. In case the Contractor shall fail so to do, or to pay any employee or employees for any services performed or for any hours of labour, wages according to the rates fixed therefor by the Minister of Labour, the Minister of Labour may authorize and direct the Minister to pay any such wages at the rates so fixed and to deduct the amount thereof from any moneys owing by the Government to the Contractor and any such payment shall for all purposes as between the Contractor and the Government be deemed and taken to be payment to the Contractor, and the Contractor shall be bound in every particular by any such authority, direction and payment as aforesaid. The powers of the Minister of Labour hereunder shall not be exercised as to any employee or employees where it is established to his satisfaction that an agreement in writing exists and is in effect between the Contractor and the class of employees to which such employee or employees belong or the authorized representatives of such class of employees fixing rates of wages, overtime conditions and hours of labour.

It is further provided in the Order in Council that "all contracts for the manufacture and supply to the Government of Canada of fittings for public buildings, harness, saddlery, clothing and other outfit for the military and naval forces, Royal Canadian Mounted Police, letter carriers, and other Government officers and employees, mail bags, letter boxes, and other postal stores, and any other articles and things hereafter designated by the Governor in Council" must contain provisions for the observance of the current wages rates and working hours in the district, or, in the absence of any such current standards, fair and reasonable rates and working hours. These conditions are referred to in the Order in Council as "B" conditions, and include the following provisions:—

All workmen, labourers, or other persons who perform labour in the construction of the work hereby contracted for, shall be paid such wages as are generally accepted as current from time to time during the continuance of the contract for competent workmen in the district in which the work is being performed, and if there be no current rate in such district, then a fair and reasonable rate, and shall work such hours as those fixed by the custom of the trade as respects hours in the district where the work is carried on, or if there be no custom of the trade as respect hours in the district then fair and reasonable hours, except for the protection of life and property, or on due cause shown to the satisfaction of the Minister of Labour. In the event of a dispute arising as to what is the current or fair and reasonable rate of wages or what are the current hours fixed by the custom of the trade or fair and reasonable hours it shall be determined by the Minister of Labour, whose decision shall be final; payment may also be withheld of any moneys which would otherwise be payable to the contractor until the Minister of Labour's decision has been complied with.

By the term "current wages" and the term "hours of labour fixed by the custom of the trade" in the foregoing are meant respectively the standard rates of wages and hours of labour either recognized by signed agreements between employers and workmen in the district from which the labour required is necessarily drawn or actually prevailing, although not necessarily recognized by signed agreements.

In both the "A" and "B" conditions of the Fair Wages Order in Council the Minister of Labour is empowered to determine questions which may arise as to what are the current or fair and reasonable wages rates and working hours. The contractor is required to post and keep posted in a conspicuous place on the premises where the contract is being executed, occupied or frequented by the workmen, the fair wages clause or schedule inserted in his contract for the protection of the workmen employed. The contractor is also required to keep proper books and records showing the names, trades and addreses of all workmen in his employ and the wages paid to and time worked by such workmen, these records to be open for inspection by fair wages officers of the Government any time it may be expedient to the Minister to have the same inspected.

It is declared that the contractor shall not be entitled to payment of any money which would otherwise be payable under the terms of contract until he has filed a statement showing: (1) the wage rates and hours of labour which are in force for the various classes of workmen; (2) whether any wages or payments remain in arrears; and (3) that all of the labour conditions of the contract have been complied with. In the event of default being made in the payment of the wages of any workman employed, claim therefor may be filed with the Minister of the department with which the contract has been made and payment of such claim may be made by the latter. (Under the "A" conditions these rights extend to moneys payable for the use or hire of horses or teams.)

All workmen employed in the execution of the contract shall be residents of Canada, unless the Minister of the department with which the contract has been made is of opinion that Canadian labour is not available, or that other special circumstances exist which render it contrary to the public interest to enforce this provision.

Under the "A" conditions clerks of works or other inspecting officers appointed by the Government to ensure the due observance of the contract are especially instructed to do all in their power to see that the labour conditions are fully complied with and to report any apparent violations to the department with which the contract is made.

The "B" conditions provide that the contractor's premises and the work being performed under contract shall be open for inspection at all reasonable times by any officer authorized by the Minister of Labour for this purpose, and that the premises shall be kept in sanitary condition.

Contracts Awarded Recently

During the past month statements were received in the Department of Labour showing that the following contracts were recently executed by the Government of Canada, and that they included either fair wage schedules as shown below, or the general fair wages clause above mentioned:—

DEPARTMENT OF NATIONAL DEFENCE

Contracts in Group "A" (Construction, etc.)

Construction of buildings at the Radio Station, Lethbridge, Alta. Name of contractors, Buchan Construction Co., Calgary, Alta. Date of contract, September 24, 1930. Amount of contract, $14,870. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers and masons	$1 45	8
Plasterers	1 40	8
Tile setters	1 35	8
Carpenters and joiners	1 00	8
Cement finishers	1 00	8
Lathers	1 00	8
Plumbers and steamfitters	1 00	8
Sheet metal workers	1 00	8
Structural steel workers	1 00	8
Terazzo layers	1 00	8
Electricians	0 90	8
Painters and glaziers	0 85	8
Driver, team and wagon	0 80	8
Engineer—gasoline cement mixer	0 75	8
Plasterers' helpers	0 70	8
Electricians' helpers	0 60	8
Plumbers' and steamfitters' helpers	0 60	8
Terrazzo layers' helpers	0 60	8
Cement layers and mixers	0 50	8
Labourers—building	0 50	8
" common	0 45	8
Sheet metal workers' helpers	0 50	8
Truck drivers	0 50	8

Construction of buildings at the Radio Station, Red Deer, Alta. Name of contractors, Messrs. Connell & Packer, Red Deer, Alta. Date of contract, September 24, 1930. Amount of contract, $14,500. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers and masons	$1 45	8
Plasterers	1 40	8
Metal lathers	1 25	8
Terrazzo layers	1 25	8
Tile setters	1 25	8
Plumbers and steamfitters	1 20	8
Sheet metal workers	1 12½	8
Electricians	1 10	8
Carpenters and joiners	1 00	8
Cement finishers	1 00	8
Structural steel workers	1 00	8
Painters and glaziers	0 95	8
Driver, team and wagon	0 95	8
Patent roofers	0 85	8
Plasterers' helpers	0 77½	8
Engineer, gasoline cement mixer	0 75	8
Sheet metal workers' helpers	0 75	8
Plumbers' and steamfitters' helpers	0 60	8
Terrazzo layers' helpers	0 60	8
Tile setters' helpers	0 60	8
Cement mixers	0 50	8
Labourers—building	0 50	8
Truck drivers	0 50	8
Labourers, common	0 45	8
Electricians' helpers	0 50	8
Wood lathers	0 08 per yd.	8

Construction of buildings at the Radio Station, Maple Creek, Sask. Name of contractors, Messrs. McWilliam & Burden, Swift Current, Sask. Date of contract, September 25, 1930. Amount of contract, $7,689.42. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of laobur Not more than
	per hour	per day
Bricklayers and masons	$1 45	8
Carpenters and joiners	1 00	8
Cement finishers	1 00	8
Cement layers	0 50	8
Cement mixers	0 50	8
Electricians	0 90	8
Electricians' helpers	0 60	8
Cement mixer engineer (gasoline)	0 75	8
Labourers	0 45	8
	per yard	
Lathers, wood	0 07	8
Lathers, metal	0 09	8
	per hour	
Painters and glaziers	0 87½	8
Plasterers	1 35	8
Plasterers' helpers	0 50	8
Plumbers and steamfitters	1 20	8
Plumbers' and steamfitters' helpers	0 60	8
Sheet metal workers	0 95	8
Sheet metal workers' helpers	0 50	8
Tile setters	1 35	8
Truck drivers	0 45	8
Teamsters with team and wagon	0 85	8

Overtime may be permitted in case of necessity on the basis of time and one half.

Exception to the 8 hour day and overtime provisions will be recognized in preparatory and complementary work.

Construction of a road at Petawawa Camp, Petawawa, Ont. Name of contractors, The Edgar Irvine Co., Ltd., Alexandria, Ont. Date of contract, September 10, 1930. Amount of contract, $20,000. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per day	per day
Tractor driver (gas)	$4 00	8
Foreman (road gang)	3 50	8
Labourers (unskilled)	3 00	8

Installation of hot water heating system in the Officers' Block, Wellington Barracks, Halifax, N.S. Name of contractors, Powers Bros., Lunenburg, N.S. Date of contract, September 18, 1930. Amount of contract, $18,370. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than	
	per hour	per day	per week
Plumbers	$ 0 90	8	44
Steamfitters	0 90	8	44
Helpers	0 45	8	44
Labourers	0 40	8	48
	per day		
Horse, cart and driver	5 00	8	48
Team, wagon and driver	7 00	8	48

Overtime may be permitted in case of necessity on the basis of time and one-half.

Exceptions to the 8-hour day and overtime provisions will be recognized in preparatory and complementary work.

Installation of plumbing and plumbing fixtures in the Officers' Block, Wellington Barracks, Halifax, N.S. Name of contractors, Powers Bros., Ltd., Lunenburg, N.S. Date of contract, September 18, 1930. Amount of contract, $7,690. The same fair wages schedule was inserted in this contract as in the one above.

Under drainage at Aerodrome, Trenton Airport, Trenton, Ont. Name of contractors, The Quinte Construction Co., Ltd., Toronto, Ont. Date of contract, September 4, 1930. Amount of contract, $6,102.20. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Bricklayers	$1 10	8
Bricklayers' labourers	0 50	8
Masons	1 10	8
Masons' labourers	0 50	8
Plasterers	1 10	8
Plumbers	0 70	8
Carpenters	0 80	8
Electricians	0 70	8
Painters and glaziers	0 70	8
Concrete labourers	0 40	8
Ordinary labourers	0 40	8
Sheet metal workers	0 70	8
Roofers—felt and gravel	0 50	8
Roofers—sheet metal	0 70	8
Driver, team and wagon	0 75	8
Structural ironworkers	1 00	8

Overtime may be permitted in case of necessity on the basis of time and one-half.

Exceptions to the 8-hour day and overtime provisions will be recognized in preparatory and complementary work.

Grading aerodrome at Trenton Airport, Trenton, Ont. Name of contractors, The Quinte Construction Co., Ltd., Toronto, Ont. Date of contract, September 4, 1930. Amount of contract, $17,222.53. The preceding fair wages schedule was also used in connection with this contract.

Ploughing, harrowing and seeding the Aerodrome, Trenton Airport, Trenton, Ont. Name of contractor, Mr. J. F. Rose, Trenton, Ont. Date of contract, September 4, 1930. Amount of contract, $17,724.20. The preceding fair wages schedule was also used in connection with this contract.

Department of Public Works

Contracts in Group "A" (Construction, etc.)

Construction of a concrete protection wall at Laprairie, Que. Name of contractor, Albini Lacroix, St. Lambert, P.Q. Date of contract, September 23, 1930. Amount of contract, approximately $80,682.40. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Mechanical engineer	$1 00	8
Stationary engineer	0 75	8
Firemen	0 55	8
Pile driver	0 75	8
Concrete mixer operators	0 60	8
Blacksmiths	0 65	8
Blacksmiths' helpers	0 50	8
Carpenters	0 75	8
Labourers	0 35	8
Steam roller operators	1 00	8
Driver, horse and cart (per day)	5 00	8
Driver, team and wagon	6 50	8

Construction of renovations and repairs to the Quarantine Station at Grosse Isle, P.Q. Name of contractor, Jos. Dorval, Lauzon, P.Q. Date of contract, September 23, 1930. Amount of contract, $7,374.82 and unit prices. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Concrete workers	$0 40	8
Concrete mixers	0 40	8
Concrete Floaters	0 40	8
Concrete finishers	0 50	8
Stonemasons	1 00	8
Brick and hollow tile layers	1 00	8
Structural steel workers	1 00	8
Carpenters and joiners	0 60	8
Sheet metal workers	0 55	8
Felt and gravel roofers	0 55	8
Metal lathers	0 60	8
Plasterers	1 00	8
Painters and glaziers	0 55	8
Plumbers and steamfitters	0 55	8
Electricians	0 60	8
Skilled labourers and helpers	0 45	8
Labourers	0 35	8
Driver, horse and cart...(per day)	5 00	8
Driver, team and wagon "	6 50	8
Motor truck driver.....(per week)	17 50	8

Construction of an extension to the public wharf at Tourelle (St. Joachim), Gaspe Co., P.Q. Name of contractor, Joachim J. Leclerc, Tourelle, P.Q. Date of contract, Sept. 29, 1930. Amount of contract, approximately, $20,422.38. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Carpenters	$0 50	8
Blacksmiths	0 50	8
Blacksmiths' helpers	0 40	8
Labourers	0 35	8

Construction of a wharf at Beauharnois, P.Q. Name of contractors, Farley & Grant, Ottawa, Ont. Date of contract, Sept. 15, 1930. Amount of contract, approximately $18,861.65. A fair wages schedule was inserted in the contract as follows:—

Trade or Class of Labour	Rates of wages Not less than	Hours of labour Not more than
	per hour	per day
Carpenters	$0 60	8

RECENT INDUSTRIAL AGREEMENTS AND SCHEDULES OF WAGES

A SUMMARY is given below of the more important industrial agreements and schedules of wages and working conditions that have recently been received by the Department. Such agreements are summarized each month in the LABOUR GAZETTE. In the majority of cases the agreements are signed by both the employers and the employees. Verbal agreements which are also included in the records, are schedules of rates of wages and hours of labour and other conditions of employment agreed upon between the parties concerned, and in effect though not signed. In addition to these, important schedules of wages are summarized, including civic schedules. In the case of each agreement or schedule, the rates of wages for the principal classes of labour are given, with other information of general interest.

Manufacturing: Printing and Publishing

MOOSE JAW, SASKATCHEWAN.—CERTAIN NEWSPAPER AND BOOK AND JOB FIRMS AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 627.

Agreement to be in effect from November 1, 1929, to October 31, 1930, and from year to year until either party gives notice of change 60 days prior to the expiration date in any year.

This agreement is similar to the one previously in force and summarized in the LABOUR GAZETTE for July, 1929, page 804, and January, 1926, page 59, with the following exceptions:

Wages for journeymen workers in both newspaper and book and job offices, including make-upmen, admen, bankmen, proofreaders, operators of typesetting and typecasting appliances, machinists, and all employees engaged in machine and hand composition and distribution: $1 per hour for day work and $1.13½ per hour for night work.

The hours are the same as in the previous agreement, namely, 48 per week for day work on newspapers and 45 per week for night work on newspapers; on book and job work 44 hours per week for both day and night work.

LETHBRIDGE, ALBERTA.—A CERTAIN NEWSPAPER PUBLISHER AND THE INTERNATIONAL TYPOGRAPHICAL UNION, LOCAL NO. 551.

Agreement to be in effect from May 16, 1929, to May 15, 1932, and for a reasonable time thereafter (not exceeding 30 days) as may be required to negotiate a new agreement. Notice must be given 60 days prior to expiration date by either party desiring a change. If an agreement is not reached, the matter will be dealt with by the joint standing committee mentioned below.

Only members in good standing in the local union will be employed and the employer agrees to respect and observe the conditions imposed by the laws of the International Union, which are made a part of the agreement.

In consideration of this provision, the union grants to the employer the use of the union label as long as the agreement is adhered to.

Hours: in newspaper offices 45 per week for day work, 44 per week in job offices; 45 per week for night work.

Overtime: time and one-half for first four hours; overtime over four hours, double time. Work on Sundays and on Dominion Day, Labour Day and Christmas day, double time; work on New Year's Day, Good Friday, Victoria Day and Thanksgiving Day, time and one-half. This overtime pay for work on Sundays and holidays does not apply to work on morning newspapers or to night staffs on afternoon newspapers. When a regular is called to work outside of regular hours, he will be paid $1 for the call in addition to overtime pay.

Wages: make-up men, admen, bankmen, journeymen engaged in hand composition or distribution, operators of typesetting machines, machine tenders (machinists): from May 16, 1929, to May 15, 1931, $1.05 per hour or $47.25 per week for day work; from May 16, 1931, to May 15, 1932, $1.06⅔ per hour or $48 per week for day work. Night work $3 per week over the day scale. Machinist operators to be paid 6⅔ cents per hour extra.

When a shift is worked part day and part night, the night scale will be paid.

Foremen to have the right to employ help and discharge them for certain specified reasons.

One apprentice allowed for every five journeymen employed or not more than two in one department, but every office employing one jour-

neyman besides the proprietor will be entitled to one apprentice.

Apprentices must be at least 16 years old and must have attended high school at least one year. They will be examined by the apprentice committee and will take the course in printing of the international union. The work to be done in each of the five years of apprenticeship is specified.

Wages for apprentices: first and second years optional, third year 35 per cent of journeymen's scale, fourth year 45 per cent, fifth year 55 per cent.

Provision is made for proper ventilation and sanitation regulations.

A joint standing committee consisting of two members of each party will be formed to whom will be referred all disputes, the decision to be final and binding. If unable to agree, a fifth member will be selected, who with the other four will form a board or arbitration, the decision of this board will then be final and binding.

Construction: Buildings and Structures

Montreal, Quebec.—Master Plasterers' Section of the Builders' Exchange Incorporated of Montreal and the Operative Plasterers' and Cement Finishers' International Union, Local No. 33.

Agreement signed following the strike which is reported on page 1137 of this issue, to be in effect from September 15, 1930, to April 30, 1932. If either party desires a change, six months' notice must be given prior to expiration date. The agreement applies only to such members of the Masters Plasterers' Section as are employers of the members of this local union.

The business agent will be permitted to visit each job. The union may not make a different agreement with any other employer, but this agreement may be entered into with other employers.

Hours: 8 per day, 4 on Saturdays. No work on Saturday afternoons except with the permission of the union president or business agent or the steward on the job.

Overtime: all overtime and work on Sundays and four holidays, double time. No work on Labour Day.

Wages per hour for journeymen: from September 15, 1930, to April 30, 1931, $1.05 per hour; from May 1, 1931, to August 31, 1931, $1.15; from September 1, 1931, to April 30, 1932, $1.20.

Apprentices will be governed by the existing rules of the International Union of Plasterers relating to numbers per journeymen.

For work out of town, transportation and time travelling during working hours to be paid and an allowance of $1.50 per day except Sunday for board.

Fort William and Port Arthur, Ontario.—Building Contractors and the Bricklayers' and Masons' International Union, Local No. 25.

Verbal agreement to be in effect from June 1, 1930, to April 30, 1931.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette for October, 1929, page 1161, with the following exception:

The provision for the payment of wages at the rate of $1.40 per hour for work out of town where union members cannot return home daily has been omitted.

The regular rate of wages remains at $1.25 per hour with a 44-hour week.

Transportation and Public Utilities: Street and Electric Railways

Halifax, N.S.—The Nova Scotia Light and Power Company Limited and their Employees of the Departments of Street Car Operation, Street Car Maintenance, Electrical Distribution, Power House and Substation, and Gas.

Agreement to be in effect from August 15, 1930, to August 14, 1931, and from year to year thereafter until either party gives notice of change two months before the expiration date in any year.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette for November, 1929, page 1285, with the exception of changes in wages:

Wages for Platform employees: operators of street cars—first year 48 cents per hour, second year 51 cents, third year 56 cents, over three years, 61 cents.

Wages for Car House employees: first class carpenters 73 cents per hour, second class carpenters 66 cents, third class carpenters 59 cents, carpenters' helpers 53 cents, first class painters 73 cents, second class painters 66 cents, third class painters 59 cents, head repairmen 73 and 77 cents, armature winders 77 cents, first class pitmen and special repairmen 68 cents, first class pitmen 66 cents, second class pitmen 61 cents, general utility men (experienced) 53 and 61 cents, car cleaners 53 cents, cleaners (general) 51 cents.

Wages for Machine Shop employees: first class machinists 77 cents per hour, second class machinists 72 cents, third class machinists 63 cents, welders 77 cents, blacksmiths 68 cents, blacksmiths' helpers 55 cents.

Wages for Power House, Line and Meter employees: first class linemen 77 cents per hour, second class linemen 72 cents, third class linemen 63 cents, first class groundmen 55 cents, second class groundmen 50 cents, troublemen 77 cents, meter inspector 77 cents, first class metermen 72 cents, second class metermen 63 cents, third class metermen (with over one year's service) 55 cents, lamp repairmen 77 cents, switchboard operators 66 cents, first class electricians 77 cents, second class electricians 72 cents, third class electricians 63 cents.

Wages for employees of Steam Department: masons and boiler repairmen 66 cents per hour, senior steam helpers 64 cents, junior steam helpers 50 cents, ash handlers 53 cents, firemen 64 cents, assistant firemen 57 cents.

Wages for Gas Department Employees: first class fitters 77 cents per hour, second class fitters 68 cents, fitters' helpers 61 cents, meter repairmen 61 cents, meter repairmens' helpers 50 cents, blacksmith 66 cents, skilled labour 51 to 55 cents, common labour 44 to 50 cents, leading firemen 68 cents, firemen 59 cents.

Cornwall, Ontario.—Cornwall Street Railway Company and the Amalgamated Association of Street and Electric Railway Employees, Local No. 946.

Agreement to be in effect from April 1, 1930, to March 31, 1931, and from year to year unless either party gives notice of change 30 days before April 30, of any year.

The company agrees to meet and treat with the union on all questions or grievances that may arise during the life of the agreement.

All motormen will be required to wear uniforms.

Motor crews and sweeper crews will be equipped with rubber coats, boots and hats and also be given a sheepskin coat for winter.

At any time that an employee is accused of any misdemeanour, he will be allowed to defend himself.

The hours and wage rates are not included in the agreement but those reported by the union as being in effect are as follows:

Hours: motormen 66 per week, electricians and linemen 60 per week, power plant operators 56 per week.

Wages: motormen—first year 39 cents per hour, second year 41 cents, third year 44 cents; electricians and linemen 40 cents per hour; power plant operators $125 per month.

London, Ontario.—The London Street Railway Company and its Employees Other Than Motor Bus Operators and Motor Bus Mechanics.

Agreement to be in effect from September 1, 1929, until either party gives 60 days' notice of change.

This agreement is the result of an arbitration award of the Ontario Municipal and Railway Board dated December 30, 1928, which recommended an increase of 2 cents per hour for all classes of labour from December 1, 1928. The company having no revenue to meet the increase, it did not become effective until the street car and bus service had been re-arranged to reduce costs and the agreement approved at the civic election December 2, 1929. The agreement was then signed on January 30, 1930, but its terms were made retroactive to September 1, 1929. The previous agreement had continued in effect from June 1, 1921, subject to 60 days' notice, but the wage schedule had been amended in 1922 and 1923.

Membership in the Amalgamated Association of Street and Electric Railway Employees of America to be optional for employees. The company will meet and treat with any authorized committee of employees, to consist exclusively of employees; motormen, conductors and one-man car operators to be given leave of absence to transact any business of the union without loss of seniority, provided arrangements are made 24 hours in advance. Any member of the union may secure protracted leave of absence, not exceeding 90 days, with the approval of the superintendent and of the union.

Any employee suspended or discharged may have his case taken up by any authorized committee of employees with the management within three days, and if not guilty shall be reinstated with pay for lost time.

No regular week day run to pay less than 9 hours.

Satisfactory arrangements will be made by the company in compliance with the law providing for one day off each week for men working on Sundays.

Wages per hour: motormen and conductors: first year 45 cents, second year 48 cents, third and subsequent years 50 cents; one-man car operators: first year 50 cents, second year 53 cents, third year 55 cents. Motormen, conductors and one-man car operators training students, working snow plows or sweepers to be paid 3 cents per hour extra.

Wages per hour for shopmen, car house men and linemen: blacksmiths 60 and 63 cents, blacksmiths' helpers 50 cents, carpenters 55 to 60 cents, machinists 60 and 62 cents, painters 55 cents, electricians 57 cents, armature winder 60 cents, coil winder 52 cents, shop cleaner 45 cents, fireman 45 cents, night car cleaners 42 cents, night car inspectors 45 cents, pitmen 50 and 52 cents, linemen 55 and 60 cents.

Wages per hour in track and welding department: motormen 47 and 50 cents, track labourers 40 to 45 cents, welders 47 cents.

Overtime: regular motormen, conductors and one-man car operators to be paid 10 cents per hour extra for work after their regular scheduled working hours; spare motormen, conductors and one-man car operators to be paid 10 cents per hour extra for work performed after the completion of a scheduled run for a day and on any extra runs after 10 hours; all motormen, conductors and one-man car operators to be paid 10 cents per hour extra for all work on Sundays. All shopmen, barnmen, linemen and trackmen will be paid 10 cents per hour extra for work on Sundays and for overtime after their regular daily schedule except if called out for emergency work after their regular daily schedule when time and one-half will be paid.

Seniority in the service to govern the selection of runs.

The company will pay half the cost of uniforms required.

London, Ontario.—The London Street Railway Company and its Employees of the Motor Bus Division.

Agreement to be in effect from September 1, 1929, until either party gives 60 days' notice of change.

The conditions covered by this agreement are similar to those governing electric street car employees summarized above with the exception of the wage scale and the following clauses:

Wages per hour: motor bus operators—first year 50 cents, second year 53 cents, third year 55 cents; bus mechanic 55 cents.

Seniority in the service of the company to govern the operation of buses, subject to the ability of the operator to properly operate them.

No extra allowance will be paid for training bus operators.

Port Arthur and Fort William, Ontario.—Cities of Port Arthur and Fort William and the Amalgamated Association of Street and Electric Railway Employees of America and all Other Employees of the Street Railway Department.

Agreement to be in effect from May 1, 1930, to May 1, 1932, and thereafter until a new agreement is entered into.

This agreement is similar to the one previously in effect and summarized in the Labour Gazette for December, 1929, page 1416, and October, 1927, page 1102, with only minor changes in working conditions.

Transportation and Public Utilities: Water Transportation

Borden, P.E.I. and Tormentine, N.B.—Canadian National Railways—Atlantic Region and Their Employees of the Car Ferry "Prince Edward Island" Operating Between Borden, P.E.I. and Tormentine, N.B.

This agreement, which was signed following the report of the Board under the Industrial Disputes Investigation Act, 1907, is printed in full on page 1127 of this issue.

Transportation and Public Utilities: Electricity and Gas

Halifax, N.S.—The Nova Scotia Light and Power Company Limited and their Employees.

Employees of this Company engaged in the electrical distribution department, in the power house and sub-station, and in the gas department, are included in the agreement summarized above under the heading "Street and Electric Railways."

AGREEMENT AS TO WAGES AND WORKING CONDITIONS FOR SECTIONMEN ON THE SYDNEY AND LOUISBURG RAILWAY

An application for a Board of Conciliation and Investigation under the Industrial Disputes Investigation Act had been made by certain employees of the Sydney and Louisburg Railway to deal with a dispute as to wages and working conditions of freight handlers, baggagemen, trackmen and clerks, during February, 1930 (Labour Gazette, March 1930, p. 266). As a result of representations from the parties involved, officers of the Department took the matter up and brought about negotiations which resulted in a settlement and a signed agreement in July.

The applicants for the Board were members of the Canadian Brotherhood of Railway Employees and wages for some of the classes of labour involved were covered by an agreement between the United Mine Workers of America and the Dominion Coal Company which owns and operates the railway, a subsidiary of the British Empire Steel Corporation. Wages and working conditions for trackmen were not covered by this agreement, as they had ceased to be members of the miners' union. The management, therefore, was willing to negotiate with this class of employees separately, as in the case of other classes of railway employees not covered by the miners' agreement, engineers, trainmen, etc., and submitted a draft agreement as the basis of negotiations. The trackmen included nearly all of the employees involved in the Board application. It was finally arranged that negotiations between the management and a committee of trackmen would be entered into and an agreement was signed effective from July 15, 1930. The terms of the agreement, it is understood, set forth the wage rates and working conditions already in effect and other provisions desired by the employees. The agreement is to be in force subject to sixty days' notice from either party, The rates of wages are 55·6 cents per hour for section foremen and 45·7 cents per hour for sectionmen. Hours of labour are eight per day, from seven a.m. to twelve noon and from one p.m. to four p.m., but men are subject to call at any time for wrecks, snow fighting and any other emergency, time and one-half for overtime and double time for Sundays and holidays.

Provision is made for seniority lists for the sections of the railway by groups, for promotion by seniority, merit and ability being sufficient, and for reduction of staff in reverse order of seniority. Provision is made for pay and expenses while attending court, for discipline of employees and for the enforcement of the rules of the road.

PRICES, RETAIL AND WHOLESALE, IN CANADA, SEPTEMBER, 1930

Cost of Living, Prices of Staple Articles and Index Numbers

THE movement in prices during the month continued toward lower levels, both the weekly family budget in terms of retail prices and the Dominion Bureau of Statistics index number of wholesale prices being lower.

In retail prices the cost per week of a list of twenty-nine staple foods for an average family of five in terms of the average prices in some sixty cities was $10.38 at the beginning of September, as compared with $10.65 for August; $11.64 for September, 1929; $11.15 for September, 1928; $10.87 for September, 1927; $10.94 for September, 1926; $10.81 for September, 1925; $10.28 for September, 1924; $10.46 for September, 1923; $10.28 for September, 1922; $11.82 for September, 1921; $15.95 for September, 1920; $16.92 for June, 1920 (the peak); $13.31 for September, 1918; and $7.83 for September, 1914. Of the twenty-nine items of food twenty-one were lower, the most important declines occurring in the prices of potatoes, beef, veal, mutton, pork, bacon, cheese, bread, flour, rolled oats, evaporated apples, prunes and sugar. The prices of eggs, milk and butter showed seasonal increases. Including the cost of fuel and rent with that of foods the total budget averaged $20.75 at the beginning of September, as compared with $21.01 for August; $21.90 for September, 1929; $21.38 for September, 1928; $21.05 for September, 1927; $21.15 for September, 1926; $21.02 for September, 1925; $20.65 for September, 1924; $20.97 for September, 1923; $20.90 for September, 1922; $22.37 for September, 1921; $26.38 for September, 1920; $26.92 for July, 1920 (the peak); $21.11 for September, 1918; and $14.33 for September, 1914. Fuel was practically unchanged. A slight increase in rent was reported from Amherst.

In wholesale prices the index number calculated by the Dominion Bureau of Statistics, based upon the average prices of 502 commodities in 1926 as 100, continued toward lower levels, being 82·5 for September, as compared with 84·1 for August; 97·3 for September, 1929; 95·4 for September, 1928; 97·1 for September, 1927; and 98·5 for September, 1926. Forty-four prices quotations were higher, one hundred and eleven were lower and three hundred and forty-seven were unchanged.

In the grouping according to chief component materials six of the eight main groups declined and two advanced. The Animals and their Products group and the Non-Metallic Minerals and their Products group advanced, the former because of higher prices for milk, butter, eggs, bacon, ham and hides, which more than offset lower prices for canned salmon, raw furs, steers and lambs, and the latter mainly because of higher prices for coal. The groups which declined were: the Vegetables and Vegetable Products group, due to lower quotations for grains, flour, bran, shorts and rubber; the Fibres, Textiles and Textile Products group, because of lower prices for raw cotton, cotton sheeting, jute, hemp and sisal; the Wood, Wood Products and Paper group, because of lower quotations for pulp and fir flooring; the Iron and its Products group, due to declines in the prices of steel tank plates, automobile body plates and steel sheets; the Non-Ferrous Metals and their Products group, due to reduced prices for copper, lead and zinc, which more than offset somewhat higher prices for antimony, silver and imported copper wire bars; and the Chemicals and Allied Products group, due to lower prices for aluminium sulphate.

In the grouping according to purpose, consumers' goods showed a slight decrease, while producers' goods were substantially lower. The decline in the former group was due to lower prices for flour, canned vegetables, fresh meats, silk hosiery and woollen cloth, which more than offset higher prices for coal, boots and shoes, cured meats, milk and eggs. In producers' goods the decline was due to lower prices for grains, bran, shorts, raw cotton, raw rubber, raw sugar, steers, lambs and steel sheets.

In the grouping according to origin, raw and partly manufactured goods declined, because of lower prices for grains, raw cotton, raw sugar, steers, lambs and copper, which more than offset higher prices for hides, eggs, milk, silver, antimony and coal. Fully and chiefly manufactured goods were also slightly lower, because of lower quotations for flour, bran, shorts, canned salmon, pulp and aluminium sulphate. Domestic farm products, articles of marine origin, articles of forest origin and articles of mineral origin were lower.

EXPLANATORY NOTE AS TO RETAIL PRICES

The table of retail prices and rentals shows the prices at the beginning of September, of seventy-one staple foodstuffs, groceries, coal, wood, and coal oil and the rent of six-roomed houses in some sixty cities throughout Canada.

(*Continued on page 1222*)

COST PER WEEK OF A FAMILY BUDGET OF STAPLE FOODS, FUEL AND LIGHTING, AND RENT IN TERMS OF THE AVERAGE PRICES IN SIXTY CITIES IN CANADA

The budget is intended to show the changes in the cost of the items included, not to show the minimum cost for an average family.

* Prior to 1926 number of commodities was 236.

(*Continued from page 1214*)

All prices are for delivered goods. The exact quality for which the quotation is given is set forth in the case of each commodity, and every effort has been made to ensure that the quotations in each case refer to the same class of commodity in order that the statistics may be available for purposes of comparison from month to month, from city to city, etc. The prices of foods and groceries in each city except milk and bread are the averages of quotations reported to the Department and to the Dominion Bureau of Statistics by a number of representative butchers and grocers in each. The prices of fuel and the rates for rent are reported by the correspondents of the Labour Gazette.

Statistics similar to these were published each month from 1910 to 1920, the figures during this period being secured at the middle of each month by the correspondents of the Labour Gazette resident in each locality from dealers doing a considerable business with workingmen's households. From 1910 to 1915 the table contained a list of only the twenty-nine foods included in the family budget, with laundry starch, coal, wood, coal oil and rent. In 1915 when monthly publication of the budget in the Labour Gazette was begun, it was decided to extend the list of foods to 40, and in 1920 the list of foods and groceries was still further extended to include over 100 items.

Beginning with October, 1922, a number of commodities were dropped from the list, and in the case of a number of articles the average prices of the grades most sold have been given, owing to the impossibility of securing prices for uniform grades for the various cities from month to month.

Oleomargarine was dropped in March, 1924, the provisions for its manufacture and sale since 1917, notwithstanding the Dairy Act, expired at the end of February, 1924.

The quotations for rent are the prevailing rates for six-roomed houses of two classes in districts extensively occupied by workingmen. The first class is of houses in good condition, favourably located in such districts with good modern conveniences. The second class is of houses in fair condition less desirably located, but still fairly central, without modern conveniences.

The weekly budget for a family of five, calculated in terms of the average prices in the cities for which reports are received, includes twenty-nine staple foods, laundry starch, coal, wood, coal oil, and rent, these being the items for which statistics have been obtained each

*The figures for "all items" were calculated by giving the following weights to each group: Food, 35%; Fuel, 8%; Rent, 18½%; Clothing, 18½%; Sundries, 20%. †Revised.

14675—8

month and published in the Labour Gazette since January, 1910. The quantities of each commodity included are modifications of those employed for similar calculations by various authorities. For some articles comparatively large quantities are included owing to the absence of other important items of the same class. For instance, the only fruits are evaporated apples and prunes, and the only fresh vegetable is potatoes. But as market conditions affecting these usually affect the prices of other fruits and vegetables somewhat similarly, the relative proportions of expenditure on the various classes of foods tends to be maintained. At times when the price of an article heavily weighted for this purpose rises or falls (abnormally) the increase (or decrease) in food prices so indicated is exaggerated, and this should be taken into account in using the budget as an indicator of changes in the cost of living. In fuel and lighting, the quantities are estimated on a similar principle, anthracite coal being used chiefly east of Manitoba, and soft coal and wood in the western provinces, while no allowance is made for the quantities required in the various localities owing to climatic conditions, nor for the differences in the heating value of the various fuels. It was estimated when the budget was first published in 1912 in the report on wholesale prices in Canada for 1911, that these calculations represented from sixty to eighty per cent of the expenditure of an ordinary family according to the total income. For the average family of five the expenditure on these items of food, fuel, light and rent would be perhaps two-thirds or about sixty-five per cent of the total income.

While the budget serves to show the increase or decrease from time to time in the cost of the items included, it does not purport to show the minimum cost of food and fuel supplies for an average family in the Dominion or in any one province. The quantities of meats, dairy products, cereals, etc., included were adopted as affording a liberal supply for the healthy family of a man at hard physical work. On the other hand an average family with an income sufficient to do so would buy less meat, etc., but more fruit, fresh and canned vegetables, etc., so that comparative expenditure would be little changed.

Index Numbers of Changes in the Cost of Living

In March, 1921, the Department published in the Labour Gazette a table of percentages of changes in the cost of living since 1913 as a tentative cost of living index number, using the figures of the above-mentioned budget for the calculation for food, fuel and rent, with preliminary figures for clothing and sundries added and this table has been brought down to date at intervals since. The calculation of a comprehensive cost of living index number covering all items of workingmen's family expenditure in progress since 1918 had been sufficiently advanced to enable the publication of preliminary figures by groups in a supplement to the Labour Gazette, January, 1926, on Prices in Canada and in Other Countries,

page 9. This table gave figures for June and December each year from 1914 to 1926, inclusive. Figures have since been given for March and September each year since 1917, and the accompanying table gives figures for December each year from 1914 to 1917, quarterly from 1918 to 1928, and monthly since January, 1929. As stated in the above-mentioned supplement, the figures in the food group in the family budget are still used to show the changes in food prices but in the other groups the percentage changes in the prices of each article have been weighted according to workingmen's average family consumption, and in the fuel and light groups gas and electricity have been included.

Cost of Electric Current and Gas for Householders

With rates in 1913 as 100, index numbers of electric light rates were 1900, 141.4; 1905, 135.6; 1910, 118.1; 1911, 113.4; 1912, 109.1; 1913, 100.0; 1914, 96.5; 1915, 90.3; 1916, 86.3; 1917, 84.6; 1918, 82.9 1919, 81.6; 1920, 81.1; 1921, 81.4; 1922, 80.1; 1923, 77.7; 1924, 76.5; 1925, 73.8; 1926, 73.2; 1927, 70.9; 1928, 69.3; 1929, 67.3; 1930, 65.5.

The above figures were arrived at by converting to the base of 1913 as 100, an index number of electric current costs from 1900 to 1913 constructed for the Board of Inquiry into the cost of living in Canada, 1913-15 (Report Vol. 2, page 318) and bringing the figures down to 1930. The figures are unweighted. The Dominion Bureau of Statistics has issued an index number of electric current rates for household consumption as follows: 1923, 73.8; 1924, 72.2; 1925, 69.9; 1926, 68.7; 1927, 68.2; 1928, 67.1. This index number is weighted according to consumption in each city. When the above index number, 1900-1929, is weighted according to population in each city covered for the years 1923-1928, the figures are substantially the same as those issued by the Bureau.

The following are index numbers of rates for manufactured and natural gas for the years 1913 to 1928 issued by the Dominion Bureau of Statistics: Manufactured gas, 1913, 100; 1914, 98.3; 1915, 98.1; 1916, 96.3; 1917, 100.7; 1918, 107.4; 1919, 111.1; 1920, 125.4; 1921, 143.6; 1922, 140.6; 1923, 135.7; 1924, 134.6; 1925, 131.6; 1926, 131.1; 1927, 129.4 1928, 127.8. Natural gas 1913, 100; 1914, 107.0; 1915, 112.5; 1916, 112.5; 1917, 113.9; 1918, 114.0; 1919, 116.1; 1920, 125.1; 1921, 137.6; 1922, 163.2; 1923, 163.0; 1924, 162.2; 1925, 179.3; 1926, 172.4; 1927, 165.9; 1928, 158.6. For the years 1900 to 1913 two index numbers of gas costs calculated for the Cost of Living Inquiry in 1914-1915, have been averaged and converted to the base of 1913 as 100, as follows: 1900, 125.8; 1901, 125.8; 1902, 125.8; 1903, 125.2; 1904, 123.9; 1905, 120.1; 1906, 107.5; 1907, 108.8; 1908, 106.9; 1909, 105.7; 1910, 103.8; 1911, 99.4; 1912, 106.6; 1913, 100.0.

Retail Prices

The decline in beef prices, in progress since July, was continued in September, sirloin steak being down from an average of 36.6 cents per pound in August to 35 cents in September; round steak from 31.4 cents per pound in August to 29.8 cents in September; rib roast from 29.1 cents per pound in August to 27.7 cents in September; and shoulder roast from 22.5 cents per pound in August to 21.1 cents in September. Lower prices were reported from most localities. Veal and mutton were also lower, the former averaging 22.9 cents per pound in September, as compared with 23.2 cents in August, and the latter 29.4 cents per pound in September, as compared with 30.1 cents in August. Both fresh and salt pork averaged lower at 30.1 cents and 27 cents per pound, respectively.

Eggs showed a seasonal increase in most localities, fresh being up from an average of 37.3 cents per dozen in August to 38.6 cents in September, and cooking from 33.3 cents per dozen in August to 34.6 cents in September. Milk was slightly higher in the average at 12 cents per quart. Increases were reported from Cobalt, Port Arthur and Fort William. Butter prices showed seasonal advances, dairy being up in the average from 32.1 cents per pound in August to 33.1 cents in September, and creamery from 35.5 cents per pound in August to 36.4 cents in September. Prices were generally higher, except in British Columbia where declines were reported from several localities. Cheese prices were again lower at 31.1 cents per pound in September, as compared with 31.4 cents in August.

Lower prices for bread were reported from Quebec, Montreal, Niagara Falls, St. Catharines, Brantford, Woodstock, London, St. Thomas, Calgary, Vancouver, New Westminster and Nanaimo, the average price being 7.4 cents per pound, as compared with 7.5 cents in August. Flour also showed a slight decrease, averaging 4.6 cents per pound. Lower prices for canned vegetables were reported from many localities, tomatoes averaging 16.1 cents per 2½-pound tin, as compared with 16.4 cents in August; peas 15.2 cents per 2-pound tin, as compared with 16.2 cents in August; and corn 16.1 cents per 2-pound tin as compared with 16.3 cents in August. Onions

were down in the average from 6.4 cents per pound to 5.5 cents. Potatoes were substantially lower in practically all localities and were down in the average from $2.18 per ninety pounds in August to $1.62 in September. Evaporated apples declined from an average of 20.6 cents per pound in August to 20 cents in September and prunes from 15.6 cents per pound in August to 15.2 cents in September. The decline in sugar prices, which commenced about the beginning of the year, was continued in September, the price for granulated averaging 6.4 cents per pound, as compared with 6.6 cents in August, and 7.3 cents in January. Coffee declined one-half cent per pound to 55·8 cents. Anthracite coal showed a slight seasonal advance, being up in the average from $15.98 per ton to $16.04. Increased prices were reported from Halifax, Quebec, Thetford Mines, Orillia, Toronto, Brantford, Guelph, and London. A slight increase in rent was reported from Amherst, N.S.

Wholesale Prices

The following is a summary of a statement of wholesale prices changes during the month issued by the Dominion Bureau of Statistics.

Grain prices were generally lower during September. No. 1 Manitoba Northern cash wheat, Fort William and Port Arthur basis, declined from an average price of 92.5 cents per bushel in August to 78.1 cents in September. The lowest level reached was 70¾ cents on the 27th, which was the low point of the last twenty-five years. The decline was said to be due to the large supplies being offered in the market, to the high official crop estimates for both Canada and United States, together with indications that Russia would be exporting quantities of wheat for the first time since 1914. Western barley was down from 38.5 cents per bushel in August to 31.7 cents in September; flax from $1.62 per bushel in August to $1.43 in September; oats from 40.2 cents per bushel in August to 33.1 cents in September; rye from 55.1 cents per bushel in August to 42.5 cents in September; and American corn from $1 per bushel in August to 98.6 cents in September. Milled products, in sympathy with grains, declined abruptly, flour being down from $6.75 per barrel to $6.17 and rolled oats from $3.10 per ninety-pound bag to $2.80. Raw sugar at New York again declined, being $1.15 per cwt. in September, as compared with $1.187 in August. Granulated sugar at Montreal was unchanged at $4.51 per cwt. The decline in raw sugar prices was said to be due to the exceptionally large crops of European beet sugar, as well as to the large supply of Cuban cane sugar, together with a decline in consumption in the United States. Raw rubber at New York declined to the lowest level on record, Ceylon being down from 10 cents per pound in August to 8.3 cents in September. Ontario potatoes at Toronto declined from $1.43 per ninety-pound bag to $1.29 and Manitoba grades at Winnipeg from $1.27 per cwt. to 85 cents. In livestock good steers at Toronto advanced from $7.21 per hundred pounds to $7.22 and at Winnipeg the price fell from $5.96 per hundred pounds to $5.50. Veal calves at Toronto rose from $10.84 per hundred pounds to $11.39 but declined at Winnipeg from $9.34 per hundred pounds to $9.03. Hogs at Toronto rose from $12.05 per hundred pounds to $12.21 and at Winnipeg from $11.18 per hundred pounds to $11.33 but at Montreal the price declined from $12.01 per hundred pounds to $11.80. Good lambs at Toronto were substantially lower at $8.30 per hundred pounds, as compared with $9.01 in August. Advances ranging from 1 to 2 cents per gallon in milk prices were reported from Quebec, Ottawa, Winnipeg, Saskatoon and Regina. Butter quotations also showed increases of from 1 to 2 cents per pound, the price for creamery prints at Montreal being up from 31.4 cents per pound to 33.3 cents and at Toronto from 32 cents per pound to 33.7 cents. Fresh eggs at Montreal rose from 38.6 cents per dozen to 43.3 cents and at Toronto from 34.5 cents per dozen to 38.5 cents. Raw furs were substantially lower, beaver declining from $23-$27 per skin to $19.50-$26, silver fox from $82.32 per skin to $74.09, and muskrat from 94 cents-$1.25 per skin to 91.5 cents-$1.09. Raw cotton at New York declined from 12.026 cents per pound in August to 10.96 cents in September. Steel tank plates declined from $1.65 per hundred pounds to $1.60, and steel sheets from $4.20 per hundred pounds to $4.10. In non-ferrous metals electrolytic copper at Montreal declined from $12.60 per hundred pounds to $12.12, while imported copper wire bars at New York advanced from $10.63 per hundred pounds to $10.75. Silver averaged 36.275 cents per ounce in September, as compared with 35.226 cents in August.

The Health bureau of the Vancouver Board of Trade, composed of public health authorities, business men and public service experts, at a recent meeting unanimously approved of the principle of compulsory state health insurance in a motion adopted. Mr. E. S. H. Winn, chairman of the Workmen's Compensation Board, stated that statistics showed that the average working man in British Columbia received less than $95 per month in wages, and that a large number of workers were suffering from disability because of the fear of incurring expense through medical treatment.

14675—8½

PRICES IN GREAT BRITAIN AND OTHER COUNTRIES

THE following notes and the accompanying tables give the latest information available as to the movements of prices in Great Britain and other countries. The index numbers of retail prices are from official sources unless otherwise stated. The authorities for the wholesale prices index numbers are named in all cases.

Great Britain

Wholesale Prices.—The Board of Trade index number, on the base 1924=100, was 70·9 for August, a decline of 1·1 per cent from July, which continues the unbroken decline each month since October, 1929, and amounts to 13·4 per cent in that period. As compared with July, the August index number for food was 0·7 per cent lower, and for industrial materials 1·4 per cent lower. Of the three food groups, cereals and meat and fish were higher while other foods declined. Among industrial materials, coal was unchanged from the July level, but all other groups were lower, the greatest decline being one of 3·3 per cent in cotton.

The *Economist* index number, on the base 1927=100, was 76·1 for August, a fall of 1·9 per cent for the month, and 18·7 per cent since August, 1929. As compared with July, cereals and meat declined 2·0 per cent, other foods 1·4 per cent, textiles 3·0 per cent, minerals 0·9 per cent, miscellaneous commodities 2·2 per cent.

The *Statist* index (in continuation of Sauerbeck's figures) on the base 1867-77=100, was 92·2 at the end of August, a fall of 2·3 per cent from the previous month and of 19·1 per cent for the year. It is the lowest figure recorded since December, 1914. Vegetable foods and sundries were slightly higher, but all other groups were lower than at the end of July. The greatest fall was in textiles which amounted to 7·2 per cent.

Cost of Living.—The Ministry of Labour index number, on the base July, 1914=100, was 157 at September 1, showing no change from August. All groups were the same as the previous month. In the food group, reductions in the prices of potatoes were offset by increases in eggs and milk.

France

Wholesale Prices.—The index number of the General Statistical Office, on the base 1913=100, was 544 for August, a decline of 0·9 per cent from July. Vegetable and animal foods were both higher than in July, but sugar, coffee and cocoa were lower. Minerals and metals, textiles and miscellaneous industrial materials were also lower than in July.

Germany

Wholesale Prices.—The index number of the Federal Statistical Office, on the base 1913=100, was 124·7 for August, a decline of 0·3 per cent from July. Agricultural products were 1·6 per cent higher, owing to increases in vegetable foods and fodder. Among industrial materials, the greatest declines were in rubber amounting to 10·2 per cent and textiles amounting to 4·2 per cent.

Cost of Living.—The official index number, on the base 1913-1914=100, was 148·8 for August, a decline of 0·3 per cent for the month. Declines in food, clothing and sundries were partly offset by slight advances in rent and heat and light.

Italy

Wholesale Prices.—The index number of Milan Chamber of Commerce, on the base 1913=100, was 402·58 for August, an increase of 0·2 per cent over the July level. This is the first monthly increase recorded since March, 1929. Both vegetable and animal foods were higher than in July, and among industrial materials, textiles and chemicals were higher, while minerals and metals, construction materials, miscellaneous vegetable products and miscellaneous industrial materials were lower.

Cost of Living.—The index number of the cost of living at Milan, on the base July, 1914 =100, was 531.49 for July, as compared with 530·90 for June, although the index number for food was 0·6 per cent lower.

Australia

Wholesale Prices.—The Melbourne index number on the base 1911=1000, was 1657 for June as compared with 1683 for May and 1662 for April. As compared with May, the index number for agricultural produce and chemicals were higher, groceries were unchanged, while there were decreases in metals and coal, jute, leather, wool, etc., dairy produce, meat and building materials.

United States

Wholesale Prices.—The Bureau of Labour Statistics, on the base 1926=100, was 84·0 for August, showing no change from July. Farm

(*Continued from page 1226*)

products advanced two per cent, foods were slightly higher, fuel and lighting materials were unchanged. The other groups, namely hides and leather products, textile products, metals and metal products, building materials, chemicals and drugs, house furnishing goods and miscellaneous commodities were lower.

The *Annalist* index number, on the base 1913=100, was 123·4 for September, an advance of 0·5 per cent over August. As compared with August, farm products, food products and fuels were higher, while textile products, metals, building materials, chemicals and miscellaneous commodities were lower.

Bradstreet's index number, showing the cost of a list of 106 commodities, was $10.2998 at October 1, a decline of 1·2 per cent from September 1, and of 18·9 per cent from October 1, 1929. "The decrease from September 1, was the eleventh successive monthly decline shown since November 1, 1929, and compares with sixteen successive monthly declines shown in 1920 and 1921." As compared with September 1, four groups advanced namely textiles, hides and leather, coal and coke and chemicals and drugs; eight groups declined, namely provisions and groceries, metals, oils, livestock, miscellaneous products, breadstuffs, fruits and naval stores; building materials were unchanged.

Cost of Living.—The index number of the National Industrial Conference Board, on the base July, 1914=100, was 151·6 for August, a fall of 0·5 per cent for the month. With the exception of a slight advance in fuel and light, all groups declined slightly, clothing showing the principal change.

RECENT LEGAL DECISIONS AFFECTING LABOUR

Directors of Bankrupt Company Continue Liable for Wages

In the case of *Davey versus Gibson* (noted in the Labour Gazette, May, 1930, page 612) appeal was taken by the defendants in the Appellate Division, Ontario Supreme Court, against the judgment of Mr. Justice Kelly, whereby he awarded to the plaintiffs $4,582.73, the amount of certain wage claims assigned to the plaintiffs, against the defendants, directors of William Cane and Sons Company, Limited, an incorporated company which had been declared bankrupt. The liability of the directors was based on section 100 of the Companies Act (Revised Statutes of Ontario, 1927, chapter 218). The Appellate Division affirmed Mr. Justice Kelly's decision.

Mr. Justice Middleton, in his judgment, said:—"The appeal is limited to one point and one point only. The statutory provision relied upon provides that the directors of a company shall be jointly and severally liable to the labourers, servants and apprentices, for all debts not exceeding one year's wages due for services performed for the company while they are such directors. But, by subsection (2) a director is not to be liable unless, *inter alia,* the company has, within one year after the debt has become due, 'gone into liquidation or has been ordered to be wound up and the claim for such debt has been duly filed and proved.' The company has been declared to be bankrupt under the provisions of the Dominion Bankruptcy Act, R.S.C. 1927, c. 11, and the appellants contend that this bankruptcy is not a going into liquidation within the meaning of the Ontario statute. The trial Judge was of opinion that going into bankruptcy is properly regarded as going into liquidation within the meaning of the statute, and with this opinion we agree."

Mr. Justice Middleton cited several English cases on this subject, and concluded:—

"These authorities, I think, are ample to justify a finding that bankruptcy is a going into liquidation within the meaning of the statute in question. If one seeks to find the probable intention of the Legislature everything points in the same direction. It is far more probable that the Legislature intended in this provision—manifestly for the protection of the directors from vexatious actions—that bankruptcy should be regarded as a 'liquidation,' rather than the legislative intention was that in the event of bankruptcy the directors should escape from liability. For these reasons the appeal should be dismissed with costs."

Davey versus Gibson (Ontario) 1930, *Dominion Law Reports,* Vol. 3, page 606.

Estimation of Damages for Bodily Injury

A bicyclist received severe injuries when he was struck by an automobile in Saskatchewan. In an action for damages for personal injuries the jury found that the driver of the automobile had shown negligence, and assessed the damages at $636.50, including general damages of $460. The plaintiff appealed in the Saskatchewan Court of Appeal, on the ground that the trial judge misdirected the jury on the question of damages, having instructed them that they might make an allowance for the pain and suffering to which the plaintiff was put in consequence of the injury, but that they were not bound to do so.

Chief Justice Haultain, in giving judgment in the Court of Appeal, said: "This is not,

in my opinion, a proper direction. The jury should have been told that, if they found that the plaintiff's injury was caused by the negligence of the defendant, they should give what they considered under all the circumstances a fair compensation for 'the bodily injury sustained; the pain undergone; the effect on the health of the sufferer, according to its degree and its probable duration as likely to be temporary or permanent; the expenses incidental to attempts to effect a cure, or to lessen the amount of injury the pecuniary loss sustained through inability to attend to a profession or business.'

"The general damages awarded in this case were $460, which, in my opinion, shows clearly that the jury must have left out of consideration some of the elements of damages which ought to have been taken into account. The plaintiff's pecuniary loss alone is shown by the evidence to have been more than the amount awarded for general damages. The only conclusion is that the jury could not have taken into consideration the severe and prolonged pain which the plaintiff undoubtedly must have suffered. To tell the jury that they were not bound to make any allowance was, in my opinion, not a proper direction. The amount of the allowance is, of course, within the discretion of the jury, but they should have been told that the plaintiff, under the circumstances of this case, was entitled to a fair compensation."

The Appeal was allowed and a new trial ordered. *Heitner versus Gillstrom* (Saskatchewan) 1930, *Dominion Law Reports*, Vol. 3, page 869.

A workman received personal injuries in November, 1928, while in the employment of a telephone company in Saskatchewan. He brought an action for damages under the former Workmen's Compensation Act (Revised Statutes of Saskatchewan, 1920, chapter 210). The trial judge allowed the sum of $2,337, and from this judgment the company appealed, the appeal being confined to the amount of damages awarded. On appeal by the defendant the Saskatchewan Court of Appeal reduced the amount of damages, on the ground that the Act imposed a limit to the amount that could be awarded.

"I do not think the amount assessed by the trial judge is excessive," Chief Justice Haultain said, "considering the nature of the injuries, the pain and suffering, the length of time the plaintiff was prevented from working, and the fact that the medical testimony shows that the injury is likely to be of a permanent character. Section 15 of the Workmen's Compensation Act, however, as amended by 1920 (Sask.) c. 73, s. 2, provides as follows:

"The amount of compensation recoverable under this Act shall not exceed either such sum as is found to be equivalent to the estimated earnings during the three years preceding the injury of a person in the same grade employed during those three years in a like employment or the sum of $2,000, whichever is larger, but shall not exceed in any case the sum of $2,500."

"This section places a limitation upon the amount of damages which can be recovered in an action under the Act. If the damages sustained, and estimated in accordance with the principles applicable, are fixed at $2,000 or less, the provisions of the section are not applicable. If however the damages exceed the amount of $2,000, it becomes necessary to consider the estimated earnings for the three years preceding the injury of a person 'in the same grade employed during those three years in a like employment' but only in order to determine what amount in excess of $2,000 and up to $2,500, should be allowed.

"The plaintiff's employment by the defendant company was not continuous. He was employed at intervals, when required to repair telephone lines and to construct new lines. For repair work he was paid 75 cents per hour, and for the construction of new lines he was paid at the rate of $50 per mile. During the time he had been engaged in the work, his average earnings were between $25 and $30 per month. He lived with his father, and did certain work for him, which he says was worth $25 per month, and his board was worth $30 per month. His father paid him no wages, but allowed him pocket money, the amount of which is not disclosed. I cannot see that his boarding with his father and working for him has anything to do with the question of compensation under section 15. The test set out in the section for estimating the damages is, 'such sum as is found to be equivalent to the estimated earnings during the three years preceding the injury of a person in the same grade employed during those three years in a like employment.' The only evidence from which any estimate can be formed of the earnings of a person in the same grade during the three years preceding the injury, is that with reference to the plaintiff's earnings in the employment in question, and the amount earned by him averaged not more than $30 per month. At this rate, his earnings during three years would amount to $1,080. There is no evidence which warrants a finding that the earnings of a person in the same grade for the three years preceding the injury would exceed the sum of $2,000. The compensation therefore cannot exceed the sum of $3,000. I would allow the appeal with costs, and vary the judgment below by reducing the amount awarded to $2,000. There should be a set-off."

Orton versus Pangman Rural Telephone Company, 1930, *Dominion Law Reports*, vol. 4, page 78.

THE LABOUR GAZETTE

PREPARED AND EDITED BY
THE DEPARTMENT OF LABOUR, OTTAWA, CANADA

VOLUME 30] NOVEMBER, 1930 [NUMBER 11

NOTES ON CURRENT MATTERS OF INDUSTRIAL INTEREST

Monthly Summary

INDUSTRIAL activity in Canada showed a further but smaller decline on October 1, according to statements received by the Dominion Bureau of Statistics from 7,384 employers, each with a minimum of fifteen employees, whose staffs aggregated 1,020,676 persons, as compared with 1,024,793 in the preceding month. This slight reduction was to be expected on the basis of the experience of the last ten years. Employment on the same date last year had also shown a reduction; in fact, the decrease had then involved a larger number of workers, but employment last autumn was in greater volume than on the date under review. The index (based on the average for the calendar year 1926, as 100), stood at 116·2, as compared with 116·6 on September 1, 1930, and with 125·6, 118·8, 110·3, 106·5, 99·5, 95·0, 100·7, 95·8 and 91·3 on October 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922 and 1921, respectively. These returns are representative of all industries except agriculture, fishing, hunting and highly specialized business.

At the beginning of October, 1930, the percentage of idleness reported to the Department of Labour by local trade unions was 9·4 compared with percentages of 9·3 at the beginning of September and with 3·7 at the beginning of October, 1929. The percentage for October was based on the returns tabulated by the Department of Labour from a total of 1,737 labour organizations embracing a membership of 205,910 persons.

Reports for September received by the Department of Labour indicated an increase over August in the volume of business transacted as shown by the average number of vacancies listed and of applications received, daily, at the offices of the Employment Service of Canada, but there was a slight decline in the average daily placements effected. Declines from the average shown daily during September last year were shown in all three divisions. For the month under review, September, 1930, the total opportunities for work offered numbered 35,668, applications made 56,746 and placements effected in regular and casual employment, 33,368.

The average cost of a weekly family budget of twenty-nine staple foods was $10.32 at the beginning of October, as compared with $10.38 for September; $11.68 for October, 1929; $11.28 for October, 1928; $10.99 for October, 1927; $10.93 for October, 1926; $10.89 for October, 1925; $10.31 for October, 1924; $10.65 for October, 1923; $10.23 for October, 1922; $11.48 for October, 1921; $15.83 for October, 1920; $16.92 for June, 1920 (the peak); $13.54 for October, 1918; and $7.99 for October, 1914. In wholesale prices in the index number calculated by the Dominion Bureau of Statistics, based upon prices in 1926 as 100, was again lower at 81·4 for October, as compared with 82·5 for September; 96·7 for October, 1929; 95·2 for October, 1928; 97·2 for October, 1927; and 98·1 for October, 1926.

The loss in working time caused by industrial disputes in Canada in October was somewhat less than in the preceding month, but was considerably more than the loss in October, 1929. The latter increase was due to a strike in coal mines in Nova Scotia. Ten disputes were in existence in October, involving 2,219 workers, and resulting in the loss of 10,397 working days. Corresponding figures for September were: eleven disputes, 2,599 workers, and 13,452 working days; and for October, 1929, ten disputes, 2,530 workers, and 8,114 working days.

Industrial Disputes Investigation Act

During October the Department received the report of a Board of Conciliation and Investigation established in connection with a dispute between the master plumbers at Saint John, New Brunswick, and the local union of the Journeymen Plumbers and Steamfitters of the United States and Canada. One new application for the establishment of a Board was received during the month. Full particulars of proceedings under the Act during the month, including the text of the report already mentioned, appear on page 1248 of this issue.

Social Insurance Commission in Quebec

The Government of the Province of Quebec recently appointed the Social Insurance Commission for which provision was made at the last session of the provincial Legislature (LABOUR GAZETTE, May, 1930, page 516), the members being as follows: Mr. Edouard Montpetit, chairman; the Right Reverend Mgr. Georges Courchesnes, Bishop of Rimouski; the Venerable Archdeacon F. G. Scott, Quebec; Mr. John T. Foster, president, Montreal Trades and Labour Council; Mr. Gerard Tremblay, secretary-general of the National Catholic Syndicates; Dr. A. Lessard, director of Public Assistance, and Mr. Georges A. Savoy, president of the Quebec Division of the Canadian Manufacturers' Association.

The instructions issued to the commission by the provincial government propose the study of the following subjects: unemployment insurance; old age pensions; sickness insurance; family assistance, or aid to the parents of large families; family placements, or the placing of under-privileged or distressed children with approved families in various sections of the province; sanitary conditions in industrial establishments, and conditions of workers in such places; occupational diseases; medical inspection for workers engaged in occupations hazardous to health; medical examination and attendance, with periodical inspections, among factory workers; campaigns of industrial hygiene for workers.

Hearings are authorized in such places as the Commission may deem fit; and power is given to summon witnesses.

Co-operative management and unemployment

Sir Henry Thornton, president of the Canadian National Railways, in his address before the Toronto convention of the American Federation of Labor last year (LABOUR GAZETTE, November, 1929, page 1233) enumerated the objectives that were sought by the railways in adopting the co-operative management plan. The first of these objectives was "continuity of employment." That some success in this direction has been achieved by certain companies that have adopted the co-operative plan is shown in the following note in the *New Republic* (New York), October 29, 1930.

"In spite of the severity of the depression, establishments which have installed union-management co-operation, like the Baltimore and Ohio Railroad and the Rocky-Mountain Fuel Company, have been able to maintain levels of employment higher than those of their competitors. Particularly noteworthy are two concerns which have adopted this plan recently. One is the Naumkeag Steam Cotton Company of Salem, Massachusetts, where Pequot sheets and pillowcases are made, and the other is Yeomans Brothers Company of Chicago, manufacturers of sewage ejectors and pumping machinery. Both these concerns employ none but union workers, and both are in highly competitive industries, while labour organizations do not exist in the plants of their chief competitors. In each case price cutting and other competitive practices seriously threatened the prosperity of the union establishments. Instead, however, of employing the usual tactics of the textile and metal employers, such as undermining the existing unions, introducing company unions, reducing wages, lengthening hours and imposing stretch-out systems, each of these companies got together with the international union of which its employees are members, and worked out a remedial program having due regard for the welfare of the workers. Their relative immunity to hard times is accounted for partly by the efficiency thus brought about and partly by the good-will toward their products created by their friendly relations with organized labour."

The co-operative management plan of the Naumkeag Steam Cotton Company was described in the LABOUR GAZETTE, June, 1930, page 679; and that of the Rocky Mountain Fuel Company in the issue of August, 1929, page 898. The Baltimore and Ohio Railway plan, which was the model of that now in effect in the Canadian National Railways, has been described in several articles (May, 1924, September, 1925, etc.). The constitution and rules of the C.N.R. co-operative plan were given in the issue for May, 1928, page 489.

Advantage of early awards of construction contracts

The Ontario Road Builders' Association recently addressed a letter to the Minister of Public Highways of the Province setting forth the advantages that would result from the awarding of road construction contracts in the fall of the year previous to that for which the work is scheduled. The Association points out that if contracts for next year's highway paving programs could be booked this fall, many contractors would spend very considerable amounts during the fall, winter and early spring months which would otherwise have been deferred until after the spring lettings. Such expenditures would be: (1) in labour for moving and setting up plant; (2) in truck-

ing and railway transportation of plant; (3) in complete overhauling and repairing of plant; (4) in erection of camps; (5) Possibly a good deal in preparing quarries and gravel pits; (6) in the ordering of repairs and renewals for machinery; (7) in the ordering of new machinery.

The *Contract Record and Engineering Review* points out that "these suggestions were submitted by the Ontario Road Builders' Association partly with a view to improving contractors' own working conditions, and spreading their annual operations over a larger period of time, relieving to some extent the haste and pressure of the present working season on the one hand, and the long period of idleness on the other. They were also submitted in the sincere hope that they would be of assistance to the highways department in its present endeavours to meet the somewhat ominous unemployment outlook for the coming winter."

Methods of lessening unemployment resulting from machinery

Professor Paul H. Douglas, of the University of Chicago, discussed "Technological Unemployment" in a paper contributed to the *American Federationist*, which has just been republished in pamphlet form. Ultimately, he believes, the problem of the displacement of workers by new scientific methods will solve itself, and in the meanwhile measures can be taken that will lessen the volume of unemployment arising from this cause. "Employment opportunities," he says, "are being built up elsewhere which will ultimately be adequate to provide for an added number of workers equal to those who under such conditions may have been eliminated from any given industry. In the long run, therefore, the improved machinery and greater efficiency of management do not throw workers permanently out of employment or create permanent technological unemployment. Instead they raise the national income and enable the level of earnings and of individual incomes to rise."

The means to be taken for lessening the losses of the displaced workers are stated as follows:—

(1) The forecasting by competent organizations of the industries and trades in which a displacement of labour is most likely to occur and the probable degree of displacement which may be expected.

(2) The planning and scheduling by management of technological change with a view to reducing the displacement of labour.

(3) In industries which are affected by the public interest, such as railroads, etc., mergers and consolidations might be permitted only on condition that men whose services were otherwise satisfactory should not, because of this fact, be dropped from the payrolls.

(4) An efficient system of public employment offices should be provided which will help to find a job for the displaced workers in other industries or occupations.

(5) The "revamping" of our systems of vocational training so that juveniles who are being trained may be given some preparation to fit them for alternative industries and displaced adults prepared for new lines of work.

(6) The payment of a dismissal wage for those who are forced out of employment by such changes is also distinctly useful.

(7) "Some more general method of protection should be devised which would draw its funds from a wider source than the immediate plant or even given industry when the workers were laid off, and which would not depend exclusively for them upon voluntary donations by the employers. The only method of meeting these requirements would be by some form of insurance against unemployment. While this is still anathema to most American business men it would seem inevitable that some such plan will be necessary if the workers are to be protected adequately against some of the inevitable consequences of industrial progress or change and thus released for constructive effort. . . . . Before any general system of insurance against unemployment either can or should be adopted in this country, there should be a great deal of further experimentation in industry with various plans. Valuable experience has been gained in the men's and women's clothing industries, and a number of other experiments are under way.

"Within the next decade at least we should make rapid progress in protecting the workers against the loss of employment from technological as well as from other reasons, and consequently in relieving great distress and in releasing a greater will to work once greater security against unemployment is provided."

Unemployment relief measures in Germany

The German Chancellor, Dr. Brüning, in a statement issued on September 30, announced that a plan for the fundamental reform of unemployment insurance was being prepared. On the same date an order was made, to become effective a week later, raising the contribution rate from 4½ to 6½ per cent of the insured person's basic wage as fixed for sickness insurance purposes.

Dr. Brüning stated that in future the income and expenditure of the unemployment insurance system must balance without the necessity for aid from the Federal Exchequer. The Federal Government undertakes payment of 420 million Reichsmarks, or four-fifths of the total amount of the emergency benefit fund established under the Employment Exchanges and Unemployment Insurance Act of 1927, as amended this year. In regard to public works the same act provides that relief works may be promoted which are "calculated to reduce unemployment and to create additional opportunities of work for the unemployed." Such relief works are of two kinds: (*a*) minor works promoted from unemployment insurance funds alone, and (*b*) major works promoted jointly from the funds of the unemployment insurance scheme, of the Federal Exchequer and of the constituent German States. The Federal contribution to these relief works has been voted by the Reichstag in the annual budget, and loans for relief works issued under this heading during the past five or six years amount to 350 or 400 million Reichsmarks, interest and amortisation on which are about 35 to 40 million Reichmarks per annum.

In pursuance of the Presidential Decree of July 26, 1930, instituting measures for financial, social and economic rehabilitation, a private company with public utility status was established at the end of July, 1930, and registered under the ordinary German company laws with the style of the German Public Works Company. To this company, of which the Federal Government is the sole shareholder, have been transferred the claims to the money advanced by the Federal Government for relief works referred to above, and on these assets it is proposed to raise a foreign loan. From the funds so raised will in future be advanced the Federal Government's contribution towards the relief works instituted under the Employment Exchanges and Unemployment Insurance Act, i.e., the new company will take over the responsibility hitherto borne by the Federal Government, and the annual vote of money for relief works under the Act, will, it is hoped become unnecessary. Supervisory control over the company is to be exercised by the Reich through the appointment to the control Board of the company of representatives of the Federal Ministries of Finance, Labour and National Economy. The Control Board is also to include representatives of banking, commerce, industry, and agriculture, and of the trade unions.

Further features of the German Government's program for the relief of the labour market and the stimulation of industrial activity include arrangements with the Federal Railway Company for the raising of a special loan of 350 million Reichsmarks to be used for the placing of contracts with private firms for improvements, repairs and new equipment, and also with the Federal Postal Authorities for the expenditure of some 200 million Reichsmarks for equipment and general development of the postal services.

Relief measures planned in Czechoslovakia

In Czechoslovakia a new unemployment law which took effect in June, prodies that work undertaken by the State, the Provvinces, districts, communes, or public corporations may be considered as emergency work for the unemployed and may be subsidized by the State. Such work will include the building of new roads, the reconstruction of old ones, reforestation, cultivation of waste lands, the cleaning of streets, public buildings, etc. In this work those persons especially are to be employed who are in receipt of trade-union and State unemployment benefits, and such persons are obliged to accept such employment unless there is a strike or lockout or their physical strength or their technical qualifications would be injured by such work. Acceptance of work is compulsory even if it involves going to another district, unless the support of the family would thereby be seriously threatened; transport expenses will be paid by the State.

A State grant of 10 crowns (30 cents) per man for eight hours of work per day will be given to building contractors who undertake emergency work, providing they submit all details of the proposed undertaking for the approval of the State (especially the number of unskilled workers to be employed) and providing favourable reports are received from the local public employment office and the local trade-union organization. Within a month after the granting of this State allowance the contractor must submit his payroll to the Ministry of Social Welfare. At the close of the work the contractor must present a report to the Ministry of Social Welfare containing all details of the work accomplished, such as costs, number of workers employed, wages paid, State grants received, number of working days, etc.

Public authorities and employers have been asked to hasten their plans for construction and other work, and to refrain from dismissing their workers, and trade unions have been invited to make suggestions in connection with the government distribution of clothing and food.

Health units as means of promoting national health

In a report which is reproduced on another page of this issue Dr. E. S. Moorhead, chairman of the Welfare Supervision Board of Manitoba, discusses the feasibility of a contributory health insurance scheme in Manitoba, pointing out certain difficulties that might arise in western Canada in connection with such a system. He concludes by expressing his approval of the system of municipal medical services maintained by public funds. In this connection it may be recalled that the House of Commons adopted a motion last March (Labour Gazette, March 1930, page 253) declaring "that in the opinion of this House, the government should take into consideration the advisability of making grants to the provinces equal to one-third the cost of establishing, and to cover permanently such full time health units as may be organized." The debate on this resolution turned mainly on the question of the jurisdiction of the Parliament of Canada in the matter of public health. On this subject the Right Hon. R. B. Bennett, now Prime Minister, said in part:

"Now let us ask ourselves what this resolution means. What is meant is that there shall be an appropriation by this Parliament of a sum of money to be placed in the hands of the provincial authorities for national health, not provincial health. Keep this in mind, the province deals with the municipal situation, with smallpox and matters of that kind, the province deals with epidemics in the communities, and in some cases with hospitalization. There is, however, a field in which the province may not, it seems to me, properly function, and that is the creation of national wealth by ensuring the health of the Canadian people..... We are asked merely to make a grant in aid of the effort which the provinces will carry forward to ensure the health of the Canadian people as a whole, not in a narrow and circumscribed area but throughout this Dominion as a whole, in order that the knowledge of preventive medicine may become universal and in order that the greatest means known to man to increase the national wealth, namely, measures to ensure the national health of our people, may become an accomplished fact."

Value of accident prevention work

The Notes on Industrial Safety and Health, on another page of this issue, include a summary of the accident record of the building trades of New York, as presented by the Building Trades Employers' Association of New York. A considerable improvement is noted in 1929 in regard to safe working conditions. One of the tables in the original report gives the accident records of 156 identical contractors whose records for two years prove the value of safety application. "The combined experience of this group shows a drop in frequency from 51·56 to 49·71 and a decline in severity from 6·38 to 4·78, a 25 per cent reduction. They constitute 52 per cent of the total number reporting for 1929, and 64·8 per cent in total man-hours worked. Every firm, large or small—and the smaller the firm the greater the reason—should keep a detailed record of accidents, and furthermore, that record showing causes, extent of injury, amount of lost time and the exposure hours, should be used in their efforts for prevention. While the keeping of accident records will not in itself prevent accidents, it is the foundation for constructive effort in safety work. Last year, due to the safety efforts of contractors, the Compensation Inspection Rating Board of New York State reduced compensation rates averaging 18·8 per cent in thirty-two different classifications in the building trades."

The "basic wage" in the Commonwealth of Australia

The Commonwealth Bureau of Census and Statistics recently issued the Labour Report for 1929, being the twentieth report in this series. The report contains four main sections, dealing with Prices (wholesale, retail, and international comparisons); Wages (nominal, effective, and international comparisons); Employment (unemployment and industrial disputes) and Associations (trade unions and employers' associations). The "basic wage" and family endowment in the Commonwealth are described in the second section. The basic wage is understood to mean the lowest wage which can be paid to an unskilled labourer on the basis of "the normal needs of an average employee regarded as a human being living in a civilized community." This wage is fixed by various industrial tribunals in Australia operating under Federal and State Arbitration Acts, and is varied from time to time according to changes in cost of living, constitution of the family unit, etc. In addition to the "basic" wage, these tribunals also determine what is known as the "secondary" wage—"the extra payment to be made for trained skill or other exceptional qualities necessary for an employee exercising the functions required."

Wage fixing tribunals existed in the State of Victoria as early as 1896, but it was not until 1907 that the first basic wage, as such, was declared by a Court in Australia. This declaration was made by Mr. Justice Higgins, president of the Commonwealth Court of Conciliation and Arbitration, and is popularly known as the "Harvester Judgment" because a harvester company was involved. The rate of wage declared in this case was 7 shillings a day, or £2-2s.-0d. per week for Melbourne, the amount considered reasonable for "a family of about five". The constituent parts of this amount were £1 5s. 7d. for food, 7 shillings for rent, and 9s. 5d. for all other expenditure. The above rate has been varied from time to time in accordance with the retail price index numbers (food, groceries, and rents) computed by the Commonwealth Bureau. The present weekly wage rates (as at May 1, 1930), for the capital cities of the various States range from £4 12s. at Sydney to £3 17s. 6d. at Brisbane, the weighted average for the six capitals being £4 7s. These amounts include the sum of 3 shillings per week which was added in 1921 in order to secure to the worker during a period of rising prices the full equivalent of the Harvester standard.

In the States of New South Wales, Queensland, South Australia and Western Australia legislation in force empowers the State industrial tribunals to determine "living" or "basic" rates of wage. The rates of wage determined by State arbitration tribunals vary from those obtaining in the Federal sphere not only as regards amount, but also in respect of constitution of the family unit whose needs it purports to supply.

Legislative program in Great Britain

The King's Speech at the opening of the Parliament of Great Britain on October 28 referred to the measures to be introduced by the government during the session, these being in part as follows:—

The establishment of a commission to inquire into the entire question of unemployment insurance, and in particular to allegations of abuse of its provisions. The commission will be asked to present interim reports on the most pressing questions, and, if required, legislation based upon them will be introduced. In the meantime a measure to make a further financial provision for an unemployment fund will be introduced.

Legislation to secure for the community its share in the site value of land;

Measures for raising of the age of compulsory school attendance, for amending the laws relating to trade disputes and trade unions, and for setting up of a consumers' council;

Ratification of the Washington hours' convention and of the international convention for safety of life at sea.

Position of British industry

The *Harvard Business Review* (October, 1930), reviewing the present position of industry in Great Britain, finds the situation there to be much more favourable than the figures for unemployment would suggest: "British records plainly indicate that the number of persons actually employed in British industry and commerce today is greater than it has ever been before in the history of the nation. Numbering the workers registered in the unemployment-insurance scheme, we find that 8 per cent more persons were employed on the first day of July, 1929, than on July 1, 1923, and there has been no break in the slow but steady advance in the numbers in the intervening six years."

The writer points out that no other nation approaches Great Britain in the completeness of its statistics of employment and unemployment, and that for this reason the British unemployment totals appear greater than those of other countries. "Thus, it is known that under the national unemployment-insurance scheme, in which 12,000,000 British workers are compulsorily enrolled, 11 per cent were registered as unemployed at the end of November, 1929, and the number was increasing."

Taking the figure 1,323,000, as the number registered as unemployed on November 25, 1929, the *Review* suggests the following considerations in regard to that total:—"Approximately 200,000 of them are women and children, who probably in most instances are not entirely dependent upon their own efforts for livelihood. Again, 70 per cent of this number have been at work some time during the preceding six months, and 90 per cent during the previous 12 months, facts which dispel the illusion that the same one and one-third million persons have not been employed for seven years. In addition to these figures there is another factor which is known as part-time employment. For example, a special investigation carried out by the British Ministry of Labour for the week ending October 27, 1928, revealed the fact that in the cotton industry 13 per cent of the workers were at that time on short time and that those so engaged worked 12.7 hours less than the usual time

in that week. Here again, however, it must not be forgotten that other nations, the United States included, are facing the problem of part-time operations and with much less available data."

By an Order in Council of the Government of Saskatchewan dated September 25, 1930, the Minimum Wage Board was appointed under authority of the Minimum Wage Act (Statutes of Saskatchewan, 1918-1919, chapter 84), the members being as follows:—Mr. Alfred J. Wickens, K.C., Moose Jaw; Mr. Stanley Edwards, Saskatoon; Mr. Ralph Heseltine, Regina; Mrs. Grace Chandler, Regina; Mrs. Ethel M. Henderson, Moose Jaw.

During October 5,099 accidents were reported to the Ontario Workmen's Compensation Board in the industries in Schedule 1 of the Act, 31 of which were fatal cases; in Schedule 2 industries 334 were reported, including 7 fatal cases; and 325 accidents in employment by the Crown, 6 of which were fatal, were reported during the month, making in all 5,758 accidents, of which 44 were fatal.

While at work on the lower level of a building at Montreal a workman was injured by a plank which was dropped from the roof by workmen of another employing company. He took action at common law, his annual salary being in excess of $1,500, the maximum salary that is considered as basis for compensation awards under the Workmen's Compensation Act of Quebec. The Superior Court awarded the plaintiff $4,870, to be paid jointly by the workman's own employer and by the other company, the former having shown negligence in not protecting the workman better and the latter in allowing its employees to handle the plank carelessly.

The British *Ministry of Labour Gazette*, October, 1930, gives estimates of the number of insured persons in employment and also the numbers unemployed in Great Britain. In the three months July to September, 1930, the estimated total number of insured persons aged 16 to 64 years was 12,173,000. Of this total 10,117,000 were not recorded as unemployed, and 2,056,000 were unemployed. Index numbers are given based on the totals for 1924 as 100. On this basis, the index number of insured persons in July-September was 109·9, that for workers not recorded as unemployed was 101·8, and that for the unemployed workers was 180·8.

Dominion Fuel Board Promotes Use of Canadian Coals

The Dominion Fuel Board recently issued a statement showing Canada's growing independence of imported coals and the expansion of markets for domestic fuels. This Board, which was formed in November, 1922, to aid in relieving conditions as a result of the fuel shortage at that time, has been active in making better known the suitability of Canadian coal for domestic and industrial consumption and in placing them on a better basis in competition with imported coals. In regard to coals from the Maritime Provinces carried by water to St. Lawrence River ports, the Board supervises the further transportation to points where foreign coals are competitive while in the West the Board is also charged with the administration of the assisted movements of western coals into the Manitoba markets.

The tonnage figures of the current year show that the efforts of the Board are meeting with success. Of Maritime Provinces coals moving to Quebec and Ontario, the Board reports that this year, as at September 15, no less than 552,000 tons of coal were accepted for transportation, while in the West the operative figures are becoming important. Since June 14 last, 110,000 tons of coal have been moved under the assisted freight rates from Saskatchewan, Alberta, and the Crowsnest Pass district of British Columbia for industrial consumption at Winnipeg and other points where foreign coals ordinarily can be sold at a lower price than Canadian coals.

Other legislation which the Fuel Board administers is the Domestic Fuel Act, 1927, which provides assistance for by-product coking plants which use Canadian coals.

Since its inception, the Fuel Board has been carrying on a thorough study of the Canadian fuel situation. It has conducted exhaustive inquiries on the technical and economic aspects of utilizing Canadian coals to a greater extent, and on methods of improved fuel utilization. Educational propaganda issued by the Board odvocating the use of alternative fuels for United States anthracite has, it is believed, directly resulted in the greatly increased utilization of such fuels in Ontario and Quebec, and has correspondingly reduced the dependence of these provinces on anthracite from across the border.

GENERAL REVIEW OF THE INDUSTRIAL SITUATION

Employment

THE employment situation at the end of October was reported by the superintendents of the Employment Service to be as follows:

In the Province of Nova Scotia few calls were received for agricultural workers, but farmers in the New Glasgow district were busy with fall ploughing, which had been delayed through lack of rain. Lumber operations were quiet, while fishing continued fair. Coal mining continued to show an average output and fairly regular working time was the rule. Manufacturers for the most part reported business as good. Iron and steel industries, through showing idleness in some departments, operated double time in others. Building construction was gradually being curtailed owing to completion of jobs on hand, but permits had been issued for prospective work. Highway construction was being continued. Passenger traffic was light, while the movement of freight was heavy. Trade, both wholesale and retail, was fair. The demand for domestic and char workers was good, while a demand for temporary sales clerks increased the placements made in the Women's Division.

The demand for farm help in the Province of New Brunswick was practically nil, though local farmers were busily engaged with their fall ploughing. Fishermen in the vicinity of Chatham sustained heavy losses, due to unfavourable weather which traversed the New Brunswick shores, but at Saint John a considerable quantity of fish was landed. There were few requests for bushmen and prospects for the winter were poor, with the exception of the vicinity of the Miramichi, where two camps had been opened. Manufacturing industries mostly were busy, though sawmills and textiles were somewhat slack. Construction, both road and building, was active, and furnished employment for many men, both skilled and unskilled workers being employed. Passenger and freight transportation was fair, as was also trade. Requests for women domestic workers were in evidence, and placements made accordingly.

Requests for farm workers, as listed at the employment offices in the Province of Quebec, showed no improvement over September, Montreal, alone, reporting a slight increase in that division. The situation was quiet in the logging industry, with nearly all office centres stating conditions were dull. Mining districts were quiet, with men being discharged by the mining companies at Rouyn. Manufacturing establishments in general were operating with decreased staffs, though cotton mills at Three Rivers showed an increase in their number of employees. Boot and shoe factories in Montreal were not very active, and printing trades were quiet, while textiles worked on reduced time. Tobacco industries were busy. In Quebec City, regained activity in manufactures was noticed to a slight extent. Building and construction showed a noticeable improvement, while future additional contracts for work in different localities will furnish employment for further numbers of men. Rail transportation was less busy, but water transportation was more active, previous to the closing of navigation. Trade was fair, while in domestic service, applications were more numerous than vacancies.

Practically all the Ontario employment offices reported a falling-off in the demand for farm help. Unusual quietness also prevailed in the logging industry with few orders for bushmen, indications being that winter operations were likely to be on a much reduced scale and with lower wages offered. Renewed interest in the mining industry centred about a discovered gold field in Northern Ontario which may lead to increased activity in that line. In the manufacturing industries, regular employees were being re-engaged after temporary lay-offs, but no new hands had been taken on as yet, and in some instances, a further reduction in staff had taken place. Iron and steel, furniture, textile and auto manufactures showed some recovery, though slackness prevailed in the rubber tire industry. Belleville, Kitchener, St. Thomas and Sault Ste. Marie reported building conditions as favourable, but elsewhere, activities in that line were slack and it was necessary to resort to municipal relief works of various kinds to aid the unemployed. Vacancies in the Women's Domestic Section were fairly numerous, but still not in sufficient number to afford positions for all available workers.

In the Province of Manitoba, with fall farm work nearing completion, vacancies notified to the employment offices for the agricultural industry were somewhat less numerous, with the exception of the vicinity of Brandon, where plenty of help was available to supply all demands. There were no requests for bushmen, though there were no applicants for this work. Manufacturing continued steady, with conditions most favourable at Brandon, where milling and lumbering companies, as well as dairies, were working with full staffs. There was little call at the present time for railway and highway construction workers, but a contemplated program in relief of unemployment will start shortly and will provide

work for a large number of men. Wholesale trade was fairly active and retail trade was improving in seasonal lines. There was a good supply of applicants for all branches of work for which women domestic workers were sought, and considerable increase was shown in the activities of this section.

There was, in some localities in Saskatchewan, an increase in the demand for farm workers, but as this was chiefly for winter help,

MONTHLY STATISTICS REFLECTING INDUSTRIAL CONDITIONS IN CANADA

(Official Statistics except where noted)

		1930			1929		
		October	September	August	October	September	August
Trade, external, aggregate	$	.....	170,090,475	148,519,060	237,698,646	188,803,442	210,025,520

(10) The index of the physical volume of business includes forestry, mining, construction, manufacturing, trade, imports, exports, car loadings, shares traded and bank debits. Industrial commodity production includes forestry, mining, manufacturing and construction. Manufacturing includes production of flour, sugar, newsprint, pig iron, steel and automobiles; imports of cotton, rubber, wool and petroleum; slaughterings of cattle, sheep and hogs; storage holdings of butter and cheese.

where in many instances board alone was offered, applicants, though sufficient in numbers, were not any too keen to accept these positions. Logging and mining were quiet, as was also building and railway construction, there being practically no work available in these lines. Women applicants for domestic service were numerous, but few placements were listed, so that quietness also prevailed in this section of the work of the offices of the Employment Service. On the whole, conditions throughout the province were none too favourable, and the situation of the unemployed, in some districts, was decidedly serious.

The return of mild weather in the Province of Alberta afforded an opportunity for farmers to continue threshing, which had been held up by recent snow storms, but the general trend of the requests was for winter work, for which little or no remuneration was offered, other than board and lodging. In the Lethbridge district additional men were hired for topping sugar beets. In the coal mining industry, orders were coming in in increased volume, and there was somewhat of a shortage of miners in some districts, though an oversupply of mine labourers. A slight demand existed for workers in the logging industry, which was expected to increase later in the season. Manufacturing industries were inactive, and a number of employees had been laid off. Building construction was also quiet, many tradesmen being idle, but railway construction continued to supply work for a substantial number of men. In the Women's Domestic Division, there was a greater registration of applicants, but vacancies were scarcer. Labour conditions throughout the province indicated that the winter relief program would afford considerable work for a large number of men who had been unable to secure employment by other means.

With the exception of help for fruit picking, there was little demand for farm workers in the Province of British Columbia. There were also few requests for men in the logging industry, except for the district about Nanaimo, where several pole camps and a shingle mill had re-opened. Many other mills were running short time with skeleton crews. Fruit packing houses were working to capacity with full staffs, but this work will be completed very shortly. The general situation in the manufacturing industries was unfavourable. Coal and metal mining were also quiet. Conditions showed little improvement in railway and building construction, and in the latter division, where work was available, it was, for the most part, of a temporary nature. Work continued on the South Forks dam, but was hindered to a great extent by weather conditions. Shipping and stevedoring provided employment for a number of workers, but not in sufficient quantity to absorb all men on hand. Trade, both retail and wholesale, was below normal, with collections poor. In the Women's domestic section there was a surplus of help in all classes, with few vacancies listed. General employment conditions in British Columbia were unfavourable as substantial numbers of transients were making application for work, of which little at present was available.

EMPLOYERS' REPORTS

Industrial activity showed a further but smaller curtailment on October 1, according to statements tabulated by the Dominion Bureau of Statistics from 7,384 employers, whose staffs aggregated 1,020,676 persons as compared with 1,024,793 in the preceding month. Employment on the same date last year also slackened, but was then in greater volume than on the date under review. The index stood at 116.2, compared with 116.6 on September 1, and with 125.6, 118.8, 110.3, 106.5, 99.5, 95.0, 100.7, 95.8, and 91.3 on October 1, 1929, 1928, 1927, 1926, 1925, 1924, 1923, 1922, and 1921, respectively. The average number of persons employed by the reporting firms in the calendar year, 1926, is taken in every case as the base equal to 100.

Firms in Ontario and the Prairie Provinces afforded heightened employment, while elsewhere there were contractions, of which the most marked was in the Maritimes. In the Maritme Provinces, there were further and larger losses, involving many more workers than did those registered on the same date last year, when the index was higher. Construction and manufactures reported the bulk of the decline, while the tendency was also unfavourable in logging, mining, services and transportation. In Quebec, manufacturing and construction registered most of the reduction, while transportation and services also showed less activity. In Ontario, improvement was indicated, particularly in manufacturing, logging and trade. On the other hand, there were marked losses in construction, transportation and communications, and in iron and steel and lumber factories. In the Prairie Provinces, there was a small increase in employment, in contrast with the declines recorded on the corresponding date in 1929 and 1928. This took place chiefly in mining and transportation, while manufacturing, construction, trade and services showed curtailment. In British Columbia, further contractions were noted, mainly in construction, manufacturing and services, while logging and trade reported heightened activity.

The trend of employment was upward in Montreal, Toronto and Ottawa, but downward

in Quebec City, Hamilton, Windsor and the Adjacent Border Cities, Winnipeg and Vancouver. In Montreal, manufacturing, shipping, construction and trade reported the bulk of the gain. In Quebec, there were losses in services, but manufacturing showed improvement. In Toronto, manufacturing was much busier, as was trade. In Ottawa, building and manufacturing were more active, while road work showed a decrease. In Hamilton, curtailment was registered in manufacturing and construction. In Windsor and the Adjacent Border Cities, there was a falling-off in the number of employed, mainly in automobile plants. In Winnipeg, there were losses in manufacturing and construction. In Vancouver, manufactures reported decreases, while construction and trade showed improvement.

An analysis of the returns by industries shows that there was a further decrease in manufactures, largely in lumber, animal food, iron and steel, building material, non-metallic mineral products, rubber and pulp and paper. On the other hand, vegetable food and textile factories showed large seasonal gains, and there were smaller increases in the fur, musical instrument, tobacco, non-ferrous metal and miscellaneous groups of manufactures. Logging, mining and trade registered considerable gains, but in construction and services there were extensive seasonal contractions, and transportation was also slacker.

An article elsewhere in this issue gives in some detail the employment situation as at the beginning of October.

Trade Union Reports

Unemployment among local trade union members continued in about the same volume during September as in the previous two months, the percentage of idleness standing at 9·4 contrasted with percentages of 9·3 in August and 9·2 in July. For September, returns were tabulated from an aggregate of 1,737 labour organizations embracing a membership of 205,910 persons. General depression was, however, indicated from September last year, when 3·7 per cent of the members reported were without work. Alberta unions registered improvement in conditions from August, the coal mines of the province particularly affording increased work and in Saskatchewan and Manitoba also some employment advance was noted. In Nova Scotia the same percentage of idleness was maintained as in August while the remaining provinces indicated some lessening in the employment volume available. Quebec, Ontario and British Columbia unions were large factors in the unfavourable situation shown in comparison with September of last year, the remaining provinces recording declines in activity on a smaller scale.

A review in greater detail of the unemployment situation among local trade unions at the close of September, 1930, appears elsewhere in this issue.

Employment Office Reports

Reports of the Employment Service of Canada for the month of September, 1930, showed 34,718 references of persons to positions and a total of 33,368 placements, of which 21,100 were in regular employment and 12,268 in casual work. Regular placements totalled 16,396 for men and 4,704 for women. Vacancies reported to the Service numbered 35,668, of which 25,166 were for men and 10,502 for women. Applications for work here were received at the offices from 42,129 men and 14,617 women, a total of 56,746. When compared with last month's figures, there was an increase shown in the volume of business transacted, daily, in vacancies listed and in applications for work, but placements showed a nominal loss. When, however, comparison was made with the work effected during September a year ago, all divisions recorded declines, the reports for September, 1929, showing 46,919 vacancies offered, 55,521 applications made and 43,056 placements effected, while in August, 1930, there were recorded 36,572 vacancies, 52,945 applications for work and 34,792 placements in regular and casual employment. In another section of this issue may be found a detailed report of the work of the offices for September, 1930, and for the quarterly period, July to September, of the current year.

Building Permits and Contracts awarded

According to the monthly report, prepared by the Dominion Bureau of Statistics, the value of permits issued in 61 cities during September, 1930, was $11,081,706, as compared with $13,817,745 in the preceding month and with $17,117,017 in September, 1929.

According to the *MacLean Building Review*, Contracts awarded during October amounted to $33,332,100. This compared favourably with $32,407,100 for September. For the year to date, new work of all types is off 21·2 per cent from the same period of last year. Building construction is 28·5 per cent less. Of the above total, $12,931,500 was for engineering purposes; $9,251,200 was for residential buildings; $7,738,200 was for business buildings; and $3,411,200 was for industrial purposes. The apportionment of the contracts awarded during October, by provinces, was as follows:

Ontario, $13,561,000; Quebec, $11,636,100; Saskatchewan, $2,862,400; Manitoba, $2,332,700; British Columbia, $1,835,700; Alberta, $706,800; New Brunswick, $304,600; Nova Scotia, $70,500; Prince Edward Island, $22,300.
